

Contents

Preface	vii
1. Vectors	
1. Vectors that You Know	1
2. Lines and Planes.....	9
3. Points: A Deeper Look.....	18
4. Curves and Tangent Vectors	22
2. Matrices	
1. Linear Systems and Matrices.....	27
2. Matrix Algebra	48
3. Inverses.....	64
4. Functions and Gradient Vectors.....	74
5. Elementary Determinants.....	82
3. Vector Spaces and Linear Functions	
1. The Definition of a Vector Space	89
2. Linear Functions.....	94
3. Nonlinear Functions.....	110
4. Differentials.....	117
5. The Chain Rule.....	135
4. Bases	
1. The Basis Concept: Independence and Span.....	148
2. Local Bases Associated with a Coordinate System.....	164
3. Dimension.....	170
4. Coordinates with Respect to a Basis	178
5. Change of Basis.....	194

5. Subspaces and Linear Equations	
1. Subspaces	210
2. Subspaces Associated with a Linear Function: Kernel and Range	224
3. Linear Equations: The Superposition Principles	237
4. Rank	249
5. Implicit and Inverse Functions	257
6. Inner Products and Differential Vector Calculus	
1. Inner Products, Norms, and Metrics.....	272
2. Orthogonality.....	281
3. The Geometry of Curves.....	297
4. Nabla: The Vector Differential Operations.....	313
7. Determinants and Integral Vector Calculus	
1. Properties of Determinants.....	321
2. Volume, Rotations, and All That: The Geometrical Significance of Determinants and Antisymmetry ..	336
3. Jacobi's Theorem: Changing Variables in Multiple Integrals	346
4. Surface Integrals — Definition	352
5. The Integral Theorems of Vector Analysis.....	361
6. Direct Methods of Evaluating Line and Surface Integrals	378
8. Eigenvectors and Diagonalization	
1. Eigenvalues and Eigenvectors	393
2. Diagonalization of Real, Symmetric Matrices	416
3. A Note on History	431
Index	437
The Greek Alphabet	446
