

# Contents

List of Examples	xv
<b>1 Introduction</b>	<b>1</b>
<b>2 An Overview of Classical Mechanics</b>	<b>5</b>
2.1 The Lagrangian Formulation . . . . .	5
2.2 The Hamiltonian Formulation . . . . .	8
2.3 Trajectories in Phase Space . . . . .	14
2.4 Variations on the Pendulum . . . . .	17
2.5 Coupled Oscillations . . . . .	26
2.6 Theory of Small Oscillations . . . . .	32
2.7 Poisson Brackets . . . . .	36
Problems . . . . .	40
<b>3 The Transition to Quantum Mechanics</b>	<b>45</b>
3.1 Basic Dirac Formulation . . . . .	45
3.1.1 The State Vector: Kets, Bras, and Inner Products . . . . .	46
3.1.2 Operators . . . . .	47
3.1.3 Matrix Representations . . . . .	50
3.2 The Quantum Postulates . . . . .	52
3.2.1 Observables, Operators, and Measurement . . . . .	52
3.2.2 Probabilities and Expectation Values . . . . .	54
3.2.3 Classical Correspondence and the Role of Commutators . . . . .	55
3.3 Transformation to the Schrödinger Picture . . . . .	63
3.4 Representations in Position Space . . . . .	67
3.5 Momentum Space . . . . .	74
3.6 Angular Momentum and Quantum Mechanics in Three Dimensions . . . . .	79
3.6.1 Angular Momentum Operators and Commutator Relations . . . . .	80
3.6.2 Quantization of Angular Momentum . . . . .	82
3.6.3 Orbital Angular Momentum Eigenfunctions . . . . .	84
3.6.4 Stationary States for Particle in a Central Potential . . . . .	93
Problems . . . . .	101

<b>4</b>	<b>Classical Treatment of Electromagnetic Fields and Radiation</b>	<b>105</b>
4.1	Electromagnetic Field Equations and Conservation Laws . . . . .	105
4.1.1	Conservation of Charge . . . . .	106
4.1.2	Conservation of Energy . . . . .	107
4.1.3	Conservation of Momentum . . . . .	108
4.2	Electromagnetic Potentials . . . . .	109
4.2.1	The Coulomb Gauge . . . . .	110
4.2.2	The Lorentz Gauge . . . . .	113
4.3	Field Due to a Changing Polarization . . . . .	119
4.4	Light Scattering from Dielectric Particles . . . . .	125
4.4.1	Integral Formulation of the Scattered Field . . . . .	127
4.4.2	Differential Formulation of the Scattered Field . . . . .	134
	Problems . . . . .	139
<b>5</b>	<b>Quantum Properties of the Field</b>	<b>143</b>
5.1	Canonical Formulation of a Pure Radiation Field . . . . .	143
5.2	Quantization of a Pure Radiation Field . . . . .	148
5.3	Coherent States of the Radiation Field . . . . .	159
5.4	Squeezed States . . . . .	167
	Problems . . . . .	172
<b>6</b>	<b>Time-Dependent Perturbation Theory, Transition Probabilities, and Scattering</b>	<b>175</b>
6.1	The Interaction Picture in Quantum Mechanics . . . . .	175
6.2	Perturbation Expansion of the Time-Evolution Operator . . . . .	178
6.3	Fermi's Golden Rule . . . . .	179
6.3.1	First-Order Transitions . . . . .	179
6.3.2	Extension to Scattering Problems . . . . .	181
6.4	Double-Differential Scattering Cross-Sections . . . . .	184
	Problems . . . . .	195
<b>7</b>	<b>The Density Operator and Its Role in Quantum Statistics</b>	<b>201</b>
7.1	Mixed States and the Density Operator . . . . .	201
7.2	Entropy and Information Content—Determining the Density Operator of a System . . . . .	203
7.3	Perturbation Expansion of the Density Operator . . . . .	211
	Problems . . . . .	218
<b>8</b>	<b>First-Order Radiation Processes</b>	<b>223</b>
8.1	Emission and Absorption of Photons by Atoms and Molecules . . . . .	224
8.1.1	Emission . . . . .	224
8.1.2	Absorption . . . . .	230
8.2	The Origins of Linewidth . . . . .	236

8.2.1	Natural Linewidth . . . . .	236
8.2.2	Other Broadening Effects . . . . .	244
8.3	The Photoelectric Effect . . . . .	246
	Problems . . . . .	258
<b>9</b>	<b>Second-Order Processes and the Scattering of Photons</b>	<b>261</b>
9.1	Scattering of Electromagnetic Radiation by a Free Electron . . . . .	262
9.1.1	Classical Theory . . . . .	262
9.1.2	Quantum Theory . . . . .	264
9.2	Scattering of Photons by Atoms . . . . .	269
9.2.1	X-ray Scattering . . . . .	271
9.2.2	Light Scattering . . . . .	290
	Problems . . . . .	302
<b>10</b>	<b>Principles of Nuclear Magnetic Resonance</b>	<b>307</b>
10.1	Energy of a Nuclear Spin in an Applied Magnetic Field . . . . .	307
10.2	Quantum Mechanical Description of Motion of a Nuclear Spin in a Static Magnetic Field . . . . .	310
10.3	Nuclear Spins in Thermal Equilibrium Under a Static Magnetic Field	312
10.4	Effect of Alternating Transverse Magnetic Field on Spin Dynamics . .	314
10.5	The Bloch Equations— $T_1$ and $T_2$ Relaxations . . . . .	323
10.6	The Principle of Spin Echo . . . . .	325
	Problems . . . . .	333
<b>11</b>	<b>Theory of Photon Counting Statistics</b>	<b>337</b>
11.1	Statistical Distribution of Photoelectron Counts . . . . .	337
11.2	Intensity Fluctuations and Correlations . . . . .	340
11.2.1	Statistics for Short Counting Time . . . . .	341
11.2.2	Statistics for Long Counting Time . . . . .	355
11.3	Photon Correlation Measurements . . . . .	356
11.4	Quasi-Elastic Light Scattering . . . . .	360
	Problems . . . . .	369
<b>12</b>	<b>Dynamic Structure Factors</b>	<b>371</b>
12.1	Dynamic Structure Factors for Simple Fluid Systems . . . . .	371
12.1.1	The Self Dynamic Structure Factor . . . . .	371
12.1.2	The Full Dynamic Structure Factor . . . . .	381
12.2	Inelastic Neutron Scattering from a Harmonic Oscillator . . . . .	385
12.3	General Properties of the Dynamic Structure Factor . . . . .	392
	Problems . . . . .	398

<b>13 Linear Response Theory</b>	<b>403</b>
13.1 Classical Treatment of Linear Response Theory . . . . .	403
13.2 Quantum-Mechanical Treatment of Linear Response Theory . . . . .	409
13.2.1 Response to a Time-Dependent Perturbation . . . . .	409
13.2.2 Response of a System at Temperature $T$ . . . . .	413
Problems . . . . .	419
<b>Some Constants and Conversion Factors</b>	<b>423</b>
<b>References</b>	<b>425</b>
