Preface..... ix

PART I CONTEXT, PHENOMENA, PROCESSES

1. Introduction.....3
1.1 Matter and Energy3
1.2 Matter and Energy Accounting.....5
1.3 Component Energies.....6
1.4 Fusion Fuels.....8
1.5 Fusion in Nature.....10
 Problems.....12

2. Physical Characterizations.....15
2.1 Particles and Forces15
2.2 Thermal Kinetics17
2.3 Distribution Parameters21
2.4 Power and Reaction Rates22
2.5 Sigma-V Parameter.....24
 Problems.....28

3. Charged Particle Scattering31
3.1 Collisional Processes31
3.2 Differential Cross Section.....32
3.3 Debye Length.....36
3.4 Scattering Limit39
3.5 Bremsstrahlung Radiation41
 Problems.....44

PART II CONFINEMENT, TRANSPORT, BURN

4. Fusion Confinement.....47
4.1 Necessity of Confinement.....47
4.2 Material Confinement.....48
4.3 Gravitational Confinement48

4.4	Electrostatic Confinement	49
4.5	Inertial Confinement	49
4.6	Magnetic Confinement	52
	Problems.....	56
5.	Individual Charge Trajectories	59
5.1	Equation of Motion.....	59
5.2	Homogeneous Electric Field.....	59
5.3	Homogeneous Magnetic Field.....	61
5.4	Combined Electric and Magnetic Field.....	65
5.5	Spatially Varying Magnetic Field.....	69
5.6	Curvature Drift.....	73
5.7	Axial Field Variations.....	76
5.8	Invariant of Motion.....	78
5.9	Cyclotron Radiation.....	80
	Problems.....	81
6.	Bulk Particle Transport.....	83
6.1	Particle Motion	83
6.2	Continuity and Diffusion	84
6.3	Particle-Fluid Connection.....	87
6.4	Particle Kinetic Description.....	89
6.5	Global Particle Leakage.....	94
	Problems.....	96
7.	Fusion Burn.....	99
7.1	Elementary D-T Burn	99
7.2	Comprehensive D-T Burn.....	103
7.3	Identical Particle Burn	105
7.4	D-D Burn Modes	107
7.5	D- ³ He Fusion.....	111
7.6	Spin Polarized Fusion	113
7.7	Catalyzed Fusion.....	115
	Problems.....	117

PART III ENERGETICS, CONCEPTS, SYSTEMS

8.	Fusion Reactor Energetics	123
8.1	System Energy Balance	123
8.2	Plasma Heating	126
8.3	Lawson Criterion	128
8.4	Ignition and Break-Even.....	131
	Problems.....	133

9.	Open Magnetic Confinement.....	135
	9.1 Magnetic and Kinetic Pressure	135
	9.2 Magnetic Flux Surfaces	138
	9.3 Magnetic Mirror.....	141
	9.4 Instabilities in Mirror Fields	146
	9.5 Classical Mirror Confinement	148
	9.6 Magnetic Pinch	151
	Problems.....	154
10.	Closed Magnetic Systems.....	155
	10.1 Toroidal Fields.....	155
	10.2 Tokamak Features.....	159
	10.3 Particle Trapping	163
	10.4 Tokamak Equilibrium	165
	10.5 Stability of Tokamaks.....	172
	10.6 Stellarator Concept	176
	10.7 Alternate Closed Configurations	183
	Problems.....	186
11.	Inertial Confinement Fusion	189
	11.1 Basic Concepts.....	189
	11.2 Rho-R Parameter.....	191
	11.3 Energy Balance	194
	11.4 Compression Energy.....	196
	11.5 Beams and Targets.....	197
	11.6 Indirect Drive.....	200
	11.7 General Layout and Operation.....	201
	Problems.....	202
12.	Low Temperature Fusion.....	205
	12.1 Low and High Temperature Reactions	205
	12.2 Compound Decay Reaction	208
	12.3 Energy Viability.....	210
	12.4 Muon Catalysis Efficiency	213
	12.5 Muon Catalyzed Reactor Concept.....	216
	12.6 Cold Fusion: A Comment.....	217
	Problems.....	218

PART IV COMPONENTS, INTEGRATION, EXTENSIONS

13.	Fusion Reactor Blanket.....	221
	13.1 Blanket Concept.....	221
	13.2 First Wall Loading	224

13.3	Plasma-Wall Interactions.....	225
13.4	Wall Impurity Effects.....	228
13.5	ICF Chamber Protection.....	232
13.6	μ DT Channel.....	232
13.7	Blanket Neutronics and Energetics.....	233
13.8	Radioactivation.....	237
	Problems.....	238
14.	Tritium Fuel Dynamics.....	241
	14.1 Tritium Properties.....	241
	14.2 Continuous D-T Burn.....	242
	14.3 Pulsed D-T Burn.....	244
	14.4 Self-Sufficient Tritium Breeder.....	246
	14.5 Tritium Dynamics in the Blanket.....	247
	14.6 External Tritium Stockpile Dynamics.....	249
	Problems.....	252
15.	Fusion-Fission Integration.....	253
	15.1 Conceptual Description.....	253
	15.2 Energy Multiplication.....	255
	15.3 Hybrid Power Flow.....	258
	15.4 Hybrid Fuel Breeding.....	260
	15.5 Satellite Extension.....	263
	Problems.....	264
16.	Concepts and Systems.....	267
	16.1 Direct Energy Conversion.....	267
	16.2 Electromagnetic Coupling.....	271
	16.3 Some Emerging Concepts.....	277
PART V APPENDICES		
A.	Fundamental Data and Relations.....	283
B.	Chart of the Light Nuclides.....	285
C.	Sigma-V and Reaction Tabulations.....	287
	Bibliography.....	289
	Index.....	291
