Preface	vii
<b>Chapter 1 Divided Differences</b>	<b>1</b>
1.1 Partially Ordered Topological Spaces . . . . .	1
1.2 Divided Difference in a Linear Space . . . . .	4
1.3 Divided Differences in a Banach Space . . . . .	5
1.4 Divided Differences and Monotone Convergence . . . . .	11
1.5 Divided Differences and Fréchet-derivatives . . . . .	16
1.6 Exercises . . . . .	21
<b>Chapter 2 Constants and Functions Appearing in Numerical Methods</b>	<b>29</b>
2.1 Preliminaries . . . . .	29
2.2 Lipschitz Conditions and Norm Estimate . . . . .	34
2.3 Lipschitz Conditions for Uryson Operators . . . . .	36
2.4 The Case $X = C$ . . . . .	39
2.5 The Case $X = L_\infty$ . . . . .	41
2.6 The Case $X = L_p, 1 \leq p \leq 2$ . . . . .	43
2.7 The Case $X = L_p, 2 < p < \infty$ . . . . .	44
2.8 Exercises . . . . .	46
<b>Chapter 3 Convergence and Error Analysis for Iterative Meth- ods</b>	<b>57</b>
3.1 Preliminaries . . . . .	59

3.2	A Unified Approach for Constructing Inexact Newton-Like Methods . . . . .	61
3.3	Semilocal Convergence Results for Newton-Like Methods . . . . .	80
3.4	A Fixed Point Proof for Extended Newton-Like Methods . . . . .	90
3.5	A Generalization of Edelstein's Theorem on Fixed Points . . . . .	97
3.6	Weak Conditions for the Convergence of Iterations . . . . .	102
3.7	Monotone Convergence of Implicit Newton-Like Methods . . . . .	108
3.8	General Ways of Constructing Accelerating Newton-Like Iterations . . . . .	113
3.9	A Generalization of Ostrowski's Theorem on Fixed Points . . . . .	117
3.10	Exercises . . . . .	120
<b>Chapter 4 Special Topics</b>		<b>155</b>
4.1	Convergence Rates for Inexact Newton-Like Methods at Singular Points . . . . .	155
4.2	Smoothness and Inexact Newton-Like Methods . . . . .	171
4.3	Convergence Domains Using Outer or Generalized Inverses . . . . .	185
4.4	Exercises . . . . .	203
<b>Chapter 5 Convergence in Generalized Banach Spaces</b>		<b>207</b>
5.1	Convergence of Inexact Newton-Like Methods with a Convergence Structure . . . . .	207
5.2	Improving the Rate of Convergence . . . . .	218
5.3	Controlling the Residuals of Inexact Newton-Like Methods . . . . .	222
5.4	Exercises . . . . .	231
<b>Chapter 6 Discretization of Newton-Like Methods</b>		<b>247</b>
6.1	The Mesh Independence Principle for Inexact Newton-Like Methods . . . . .	247
6.2	A New Newton–Mysovskii-Type Theorem . . . . .	275
6.3	Inexact Newton–Galerkin-Like Methods . . . . .	296
6.4	Exercises . . . . .	317
<b>Chapter 7 Convergence Analysis Based on the Second Fréchet-Derivative</b>		<b>323</b>
7.1	A New Convergence Theorem Based on the Second Fréchet-Derivative . . . . .	323
7.2	Improved Error Bounds . . . . .	331

7.3	A New Kantorovich-Type Theorem Involving First and Second Derivatives . . . . .	340
7.4	Newton-Like Methods Using Twice Fréchet Differentiable Operators . . . . .	347
7.5	The Convergence of Newton's Method for Polynomial Equations	356
7.6	Uniform-Like Continuity Conditions . . . . .	368
7.7	A Global Convergence Theorem . . . . .	376
7.8	Semilocal Convergence Theorems I . . . . .	381
7.9	Semilocal Convergence Theorems II . . . . .	390
7.10	Local Convergence Theorems . . . . .	397
7.11	Monotone Convergence and Divided Differences of Order Two .	406
7.12	Exercises . . . . .	412
<b>Chapter 8 Forcing Sequences and the Second Fréchet-Derivative</b>		<b>419</b>
8.1	Relations Between Forcing Sequences and Inexact Newton Iterates	419
8.2	Affine Invariant Local Convergence Theorems for Inexact Newton-Like Methods . . . . .	432
8.3	The Radius of Convergence of Newton's Method . . . . .	444
8.4	Local Convergence Involving the Second Fréchet-Derivative . .	455
8.5	Choosing Forcing Sequences . . . . .	463
8.6	Rounding Errors . . . . .	472
8.7	Convergence and Residuals . . . . .	478
8.8	Relations Between Forcing Sequences and Inexact Newton-Like Iterates . . . . .	487
8.9	Exercises . . . . .	495
<b>Appendix A Numerical Algorithms</b>		<b>503</b>
