Preface	v
1 The Rise of Atomic Theory	1
1.1 Early Atomic Theories	2
1.2 The Chemical Atom	3
1.3 The Kinetic Molecule	4
1.4 The Spectroscopic Atom	7
1.5 Antiatomism	9
1.6 The Discovery of the Electron. The Planetary Atom	10
1.7 The Constituents of Atoms and Molecules. The Modern View	13
1.8 External Interactions. Photons	16
2 The Birth of Quantum Mechanics	20
2.1 Black-Body Radiation and Planck's Discovery	21
2.2 Photons and the Photoelectric Effect	27
2.3 The Photon is a Relativistic Particle	31
2.4 The Heat-Capacity Problem	33
2.5 Bohr's Theory of the Hydrogen Atom	37
2.6 De Broglie Waves.	43
3 Wave Mechanics	50
3.1 The Time-Dependent Schrödinger Equation	51
3.2 The Time-Independent Schrödinger Equation	54
3.3 Schrödinger Operators	55
3.4 The Statistical Interpretation	57
4 Particle in a Box	61
4.1 Introduction	62

4.2	The One-Dimensional Box	65
4.3	Orthogonality of Wavefunctions	70
4.4	Number of Nodes Versus Energy	72
4.5	Inversion Symmetry	72
4.6	The Three-Dimensional Box	75
4.7	The Concept of Degeneracy	76
4.8	The Free-Electron Model	82
4.9	Non-Stationary States	87
5	Quantum-Mechanical Operators	93
5.1	The Bra-Ket Notation	94
5.2	Linear Operators. The Commutator	97
5.3	Hermitian Operators. Hermitian Conjugation	101
5.4	Some Properties of Hermitian Operators	107
5.5	Expectation Values and Uncertainties	111
5.6	The Particle in a Box Revisited	114
5.7	Commuting Hermitian Operators	117
5.8	The General Uncertainty Principle	120
5.9	Quantum Theory and Measurements	121
5.10	Matrix Algebra	125
6	The Free Particle	133
6.1	The Stationary States of the Free Particle	134
6.2	Non-Stationary States of the Free Particle	139
6.3	The Gaussian Wave Packet	143
6.4	From One to Three Dimensions	145
7	The Harmonic Oscillator	147
7.1	Definitions	148
7.2	The Schrödinger Equation for the Harmonic Oscillator	149
7.3	Solving the Schrödinger Equation	151
7.4	The Wavefunctions	155
7.5	The Algebraic Method	158
8	The Central Field Problem	165
8.1	The Reduced Mass of a Two-Body System	167
8.2	Spherical Polar Coordinates	171
8.3	Spherical Harmonics	174
8.3.1	The Dimensionless Angular-Momentum Operators	175
8.3.2	Looking for Common Eigenfunctions of $\hat{\ell}^2$ and $\hat{\ell}_z$	176

8.3.3	The Raising and Lowering Operators	178
8.3.4	The Quantum Number ℓ	180
8.3.5	A Phase Convention	181
8.3.6	The Analytical Expressions	183
8.4	The Radial Function $P(r)$	186
9	The Hydrogen Atom	192
9.1	The Effective Potential. General Notation	193
9.2	The Radial Equation for the Hydrogen-Like Atom	195
9.3	The Normalized Radial Functions	201
9.4	Radial Probability Densities	203
9.5	The Complete Wavefunctions	208
10	The Spinning Electron	218
10.1	General Angular Momentum Theory	220
10.2	Spin, Spin Functions and Spin-Orbitals	222
10.3	Properties of the Spin One-Half Operators	226
10.4	The One-Electron Atom in External Fields	230
10.4.1	The Hamiltonian With Spin Neglected	230
10.4.2	The Hamiltonian With Spin Included	232
10.4.3	The Refined Hamiltonian	234
10.5	The Zeeman Effect	239
10.6	The Pauli Equation	241
10.7	Angular-Momentum Theory and Rotations	242
11	The Periodic Table by Electron Counting	246
11.1	The Many-Electron Atom	247
11.2	Neglect of Electron-Electron Repulsion	249
11.3	The Aufbau Principle	252
11.4	Exchange Degeneracy	254
11.5	Pauli's Exclusion Principle. Slater Determinants	257
11.6	Including Electron-Electron Repulsion	260
11.7	Slater Type Orbitals	261
12	The Variational Method	270
12.1	Introduction	270
12.2	Variational Principles	271
12.3	The Time-Independent Schrödinger Equation	272
12.4	The Variational Method	274
12.5	The Linear Variational Method	279

12.6	Factorization of Secular Problems	283
13	Diatomic Molecules	289
13.1	The Adiabatic Approximation	290
13.2	One-Electron Diatomic Molecules	295
13.3	The LCAO Approximation	303
13.4	The Homonuclear Case. Ground State of H_2^+	305
13.5	LCAO-MOs for Homonuclear Diatomics	314
13.6	Electronic Structure of Homonuclear Diatomics	318
14	Vibration and Rotation of Diatomic Molecules	324
14.1	Introduction	324
14.2	The Vibrational Motion	326
14.3	The Vibrating Rotator	334
14.4	On Rotational and Vibrational Spectra	338
15	Atomic Term Symbols	341
15.1	Orthonormal Bases and Unitary Matrices	342
15.2	Coupling of Two Angular Momenta	345
15.2.1	The Uncoupled Representation	345
15.2.2	The Coupled Representation	348
15.3	Vector-Coupling Coefficients by the Construction Method	351
15.3.1	Coupling of Two Spin $\frac{1}{2}$ Particles	353
15.3.2	Coupling of Spin and Orbital Angular Momentum	355
15.4	Angular Momenta in Many-Electron Atoms	356
15.4.1	The Total Orbital Angular Momentum	357
15.4.2	The Total Spin Angular Momentum	358
15.4.3	<i>L-S</i> Coupling	360
15.4.4	Adding the Nuclear Angular Momentum. Bose-Einstein Condensates	362
16	Atomic Terms. Wavefunctions and Energies	367
16.1	Operating on Slater Determinants	368
16.2	Term Wavefunctions	370
16.2.1	The Helium Atom	370
16.2.2	The Carbon Atom	373
16.3	Matrix Elements Between Slater Determinants	374
16.4	Energies of Atomic Terms	380
16.4.1	The Helium Atom	382
16.4.2	The Beryllium Atom	383

16.4.3 The Carbon Atom	384
16.5 Hund's Rules	385
17 Electronic Terms of Diatomic Molecules	388
17.1 The Oxygen Molecule. Term Analysis	388
17.2 The Oxygen Molecule. Real Wavefunctions	391
17.3 The Oxygen Molecule. Term Energies	392
18 The Hartree-Fock Method	396
18.1 Hartree-Fock Method for a Single Determinant	397
18.2 Spin Restrictions	404
18.3 Conventional Hartree-Fock Theory	407
18.4 The Correlation Problem	410
19 Density-Functional Theory	412
19.1 Reduced Density Matrices	413
19.2 Single Slater Determinant	417
19.3 The Hohenberg-Kohn Theorem	420
19.4 The Kohn-Sham Equations	422
A Complex Numbers and Quantum Mechanics	426
B Atomic Units	429
B.1 The International System of Units (SI)	429
B.2 Atomic Units	430
C Curvilinear Coordinate Systems	434
D Surface Spherical Harmonics and Special Functions	440
E The δ-Function	442
Index	451
