1	The Breakdown of Classical Mechanics	1
1.1	Quantum Number of the Earth	1
1.2	Thermal Wavelength	2
1.3	Photons in a Beam	2
1.4	Hydrogen Atom and de Broglie	3
1.5	Vibrations in NaCl	4
1.6	Crystal Powder	4
1.7	Einstein Coefficients	5
2	Review of Classical Mechanics	8
2.1	Lagrangian and Hamiltonian for SHO	8
2.2	Lagrangian and Hamiltonian: Simple Pendulum	9
2.3	Bohr-Sommerfeld Quantization: SHO	9
2.4	Bohr-Sommerfeld: Particle in a Box	10
2.5	Larmor Frequency	11
2.6	Applicability of Bohr-Sommerfeld Quantization	12
2.7	Schrödinger and Hamilton-Jacobi	12
2.8	WKB Approximation	13
2.9	Dumbbell Molecule: Bohr-Sommerfeld	14
3	Elementary Systems	15
3.1	Commutator Identities	15
3.2	Complex Potential	16
3.3	Group and Phase Velocity	17
3.4	Linear Operators	18
3.5	Probability Density	19
3.6	Angular Momentum Operators	20
3.7	Beam of Particles	21
3.8	Time Evolution of Wave Function	22
3.9	Operator Hamiltonian	23
3.10	Zero of Energy	24
3.11	Some Commutators	25
3.12	Eigenfunction for a Simple Hamiltonian	26

4	One-Dimensional Problems	29
4.1	Potential Step	29
4.2	Deep Square Well	30
4.3	Hydrogenic Wavefunction	32
4.4	Bound State Wavefunction, Current, Momentum	33
4.5	Time Evolution for Particle in a Box	34
4.6	Particle in Box: Energy and Eigenfunctions	35
4.7	Particle in a Box	36
4.8	Particles Incident on a Potential	36
4.9	Two Beams Incident on a Potential	38
4.10	Ramsauer-Townsend Effect	39
4.11	Wronskian and Non-degeneracy in 1 Dimension	40
4.12	Symmetry of Reflection	41
4.13	Parity and Electric Dipole Moment	43
4.14	Bound State Degeneracy and Current	44
4.15	Car Reflected from a Cliff	45
5	More One-Dimensional Problems	48
5.1	Motion of a Wavepacket	48
5.2	Lowest Energy States	50
5.3	Particle at Rest	51
5.4	Scattering from Two Delta Functions	51
5.5	Reflection and Transmission Amplitudes: Phase Shifts	53
5.6	Oscillator Against a Solid Wall	55
5.7	Periodic Potential	56
5.8	Reflection and Transmission Through a Barrier	57
5.9	Hermite Polynomials: Integral Representation	58
5.10	Matrix Element Between Degenerate States	60
5.11	Hellmann-Feynman Theorem	61
6	Mathematical Foundations	63
6.1	Cauchy Sequence in a Finite Vector Space	63
6.2	Nonuniqueness of Schrödinger Representation	64
6.3	Degeneracy and Commutator	64
6.4	von Neumann's Example	65
6.5	Projection Operator	67
6.6	Spectral Resolution	68
6.7	Resolvent Operator	68
6.8	Deficiency Indices	69
6.9	Adjoint Operator	71
6.10	Projection Operator	72
6.11	Commutator of L_z and φ	74
6.12	Uncertainty Relation: L_z and $\cos \varphi$, $\sin \varphi$	74
6.13	Domain of Kinetic Energy: Polar Coordinates	75
6.14	Self-Adjoint Extensions of p^4	76

7	Physical Interpretation	79
7.1	Tetrahedral Die	79
7.2	Probabilities, Expectation Values, Evolution	79
7.3	$\langle L_x \rangle$ and $\langle L_y \rangle$ in an Eigenstate of L_z	80
7.4	Free Particle Propagator	81
7.5	Minimum Uncertainty Wavefunction	82
7.6	Spreading of a Wave Packet	84
7.7	Time-dependent Expectation Values	85
7.8	Ehrenfest Theorem	87
7.9	Compatibility Theorem	89
7.10	Constant of the Motion	90
7.11	Spreading of a Gaussian Wavepacket	90
7.12	Incorrect Time Operator	92
7.13	Probability to Find a Particle	92
7.14	Sphere Bouncing on Sphere	93
7.15	Cloud Chamber Tracks	95
7.16	Spin 1 Measurement in Two Directions	95
7.17	Particle in a Box: Probabilities and Evolution	97
7.18	Free Wave Equation: Translation Invariance	99
7.19	Free Wave Equation: Accelerated Frame	101
7.20	The Wigner Function	103
7.21	Properties of the Wigner Function	105
7.22	Uncertainty Relation and Wigner Function	106
8	Distributions and Fourier Transforms	108
8.1	Properties of the Delta Function	108
8.2	Representation of Delta Function	110
8.3	Normalization of Scattering Solution	112
8.4	Tempered Distribution	114
8.5	Fourier Transform of \mathcal{D}	114
8.6	Tempered Distribution of Fast Decrease	115
8.7	A Useful Identity	116
8.8	A Representation of $\delta(x)$	118
8.9	Fourier Transform of $\delta^{(n)}(x)$	118
8.10	Value of $x^m \delta^{(n)}(x)$	119
8.11	Distribution Occurring in Fermi's Golden Rule	119
9	Algebraic Methods	122
9.1	An Operator Identity	122
9.2	Expectation Values: Simple Harmonic Oscillator	123
9.3	Angular Momentum Matrices	124
9.4	Displaced Oscillator	127
9.5	Dipole Matrix Elements	128
9.6	Scalar Operator	129
9.7	Probability to Obtain l, m	129
9.8	Probability to Obtain l, m Along Different Axis	130

9.9	Commutators of \vec{x} and \vec{p} with \vec{L}	132
9.10	Some Eigenfunctions of Angular Momentum	132
9.11	Expectation Value of L_x	134
9.12	Rotation Invariance of the Hamiltonian	136
9.13	Uncertainty Relation for SHO	137
9.14	Baker-Campbell-Hausdorff Formula	138
9.15	A Useful Commutator	139
9.16	Uncertainty in L_z	140
9.17	Expectation Values of Angular Momentum	140
9.18	Validity of Ehrenfest's Theorem	142
9.19	Wigner Problem: Annihilation and Creation	143
9.20	Wigner Problem: SHO	145
9.21	Identity for Pauli Matrices	147
9.22	Operator Identity - Spin Rotation	148
9.23	An Operator Identity	149
9.24	Commutator with Inverse Operator	150
9.25	Schwinger Method for Angular Momenta	150
9.26	Minimum Uncertainty in J_x	152
9.27	Unsöld's Theorem and its Application	153
9.28	Rotation Matrix for $j=1$	154
9.29	Algebra and Constants of the Motion	155
9.30	Coherent State and Normal Ordering	158
9.31	Normal Ordering of x^n	158
10	Central Force Problems	162
10.1	Isotropic SHO in Two Dimensions	162
10.2	Attractive Exponential Potential	164
10.3	Reduction of the Two-body Problem	165
10.4	Particle in a Spherical Potential Well	166
10.5	Particle on Surface of a Cylinder	168
10.6	Expectation Values: Electron in a H-atom	169
10.7	Parity in Spherical Coordinates	170
10.8	Magnetic Moment due to Orbital Motion	170
10.9	Spherical Square Well	171
10.10	Binding Energy and Potential	173
10.11	Generating Function: Laguerre Polynomials	174
10.12	Normalization of Hydrogen Wavefunction	175
10.13	Kramers' Relation	177
10.14	Quantum Mechanical Virial Theorem	180
10.15	Ehrenfest Theorem for Angular Momentum	181
10.16	Angular Momentum of a Two-Particle System	182
10.17	Hulthén Potential: Ground State	183
10.18	Hydrogenic Atom in Two Dimensions	184
10.19	Runge-Lenz Vector: Constant of the Motion	186
10.20	Runge-Lenz Vector: Hydrogen Spectrum	188

11 Transformation Theory	196
11.1 Fourier Transform of Hermite Functions	196
11.2 Schrödinger Equation in Momentum Space	197
11.3 Heisenberg Equation for a Free Particle	198
11.4 Dirac Picture for Displaced SHO	199
11.5 Heisenberg Picture for Displaced SHO	202
11.6 Heisenberg Picture: SHO and Constant Force	203
11.7 Heisenberg Picture: Constant Force	204
11.8 Schrödinger Picture: Constant Force	205
11.9 Dirac Picture: Constant Magnetic Field	206
11.10 Coherent State	208
11.11 Coherent State: Overlap of Two States	208
11.12 Coherent State: Wavefunction	209
11.13 Squeezing Operator	210
11.14 No Eigenstates for Creation Operator	211
11.15 Spin Coherent State: Euler Angles	212
11.16 Minimum Uncertainty Spin Coherent States	214
11.17 Spin Coherent States: Complex Variables	216
11.18 Useful Commutator	219
11.19 Forced SHO	219
11.20 3-D Simple Harmonic Oscillator	221
11.21 Quadrupole Tensor	221
11.22 Eigenfunction of J^2 , L^2 , and J_z	223
11.23 SHO: A Time-independent Operator	225
11.24 SHO with Time-Dependent Spring	226
12 Non-degenerate Perturbation Theory	232
12.1 Expansion of $1/ \vec{r}_1 - \vec{r}_2 $	232
12.2 Second Order Correction to State	234
12.3 $1/2 \lambda x^2$ Perturbation of SHO	235
12.4 $1/4 \lambda x^4$ Perturbation of SHO	237
12.5 $1/4 \lambda x^4$ - Brillouin-Wigner Perturbation	238
12.6 Two-level System	239
12.7 Approximate SHO	242
12.8 Two-dimensional SHO	243
12.9 Kuhn-Thomas-Reiche Sum Rule	246
12.10 Electron in Box Perturbed by Electric Field	248
12.11 Positronium	249
12.12 Rigid Rotator in Electric Field	250
12.13 Electric Dipole Moment Sum Rule	251
12.14 Another Sum Rule	253
12.15 Gaussian Perturbation of SHO Bosons	254
12.16 Gaussian Perturbation of SHO Fermions	255
12.17 Polarizability: Particle in a Box	256
12.18 Atomic Isotope Effect	258
12.19 Relativistic Correction to H atom	260

12.20	van der Waals' Interaction	260
13	Degenerate Perturbation Theory	263
13.1	Stark Effect for $n = 2$ Level in H	263
13.2	Perturbation of Particle in a Box	264
13.3	Perturbation of Isotropic Two-dimensional SHO	266
13.4	Two-dimensional SHO with Off-diagonal Term	267
13.5	Non-diagonal Two-dimensional SHO	270
13.6	Particle in a Box Perturbed by Electric Field	272
13.7	Unusual Particle on Interval	273
13.8	Rigid Rotator in Magnetic Field	274
13.9	$\lambda x p_y$ Perturbation of SHO	276
13.10	Paschen-Back Effect	277
13.11	H Atom: Weak Field Stark Effect	281
14	Further Approximation Methods	284
14.1	Variational Ground State of SHO	284
14.2	Variational Ground State of H_2 Molecule	285
14.3	Square Barrier: WKB Approximation	287
14.4	Variational Ground State in Gaussian Potential	289
14.5	Variational Ground State: Quartic Potential	292
14.6	WKB: Ball Bouncing on a Floor	294
14.7	Ground State of H_2^+	295
14.8	Variational Solution: Particle in a Box	298
14.9	Hydrogen Atom: Variational Technique	299
14.10	Bound State in One Dimension	301
14.11	Field Emission: WKB Approximation	302
14.12	Deuteron: Variational Principle	303
14.13	Bouncing Ball: Variational Calculation	305
14.14	Beta Decay of Tritium	306
14.15	Anharmonic Oscillator	307
14.16	Nonlinear SHO: Variational Calculation	308
14.17	WKB Solution and Parity	311
15	Time-Dependent Perturbation Theory	314
15.1	Transition Probability: Bound State to Free	314
15.2	Photo-disintegration of Deuteron	316
15.3	Excitation of SHO	319
15.4	Excitation of SHO by Stiffer Spring	321
15.5	Periodic Perturbation	322
15.6	Excitation of H-atom	323
15.7	Expanding Box	325
15.8	Sudden Displacement of SHO	326
15.9	Sudden Perturbation of Two-level Atom	327
15.10	Berry's Phase	329
15.11	Neutron in Rotating Magnetic Field	333

15.12	Excitation of Electron by Electric Field	335
15.13	Neutron Magnetic Moment	336
15.14	Electron Passing Through Magnetic Field	337
15.15	SHO: Sudden Transition	337
15.16	Coulomb Excitation	338
16	Particle in a Uniform Magnetic Field	342
16.1	Estimate of Magnetic Energies	342
16.2	Radii of Landau Levels	343
16.3	Equation of Continuity	344
16.4	Gauge Invariance	345
16.5	Gauge Transformations and Observables	346
16.6	Spin 1/2 Particle in Magnetic Field	348
16.7	Spin 1/2 in Magnetic Field: Heisenberg Equations	349
16.8	Separation of Spin and Space for Spin 1/2	352
16.9	Spin 1/2 in Time-dependent Magnetic Field	352
16.10	Spin 1/2 in Rotating Magnetic Field	354
17	Angular Momentum, Etc.	358
17.1	Operator to Lower Total J	358
17.2	Energy Shift Due to a Magnetic Field	359
17.3	Coupling of Spin 1 to Spin 1/2	361
17.4	Example of Wigner-Eckart	362
17.5	Rotations for Spin 1/2 and Spin 1	364
17.6	Spin 1/2 Coupled to Spin 3/2	366
17.7	Coupling of Spin 1 or 0 and Spin 1/2	367
17.8	Identity for Constant Magnetic Field	368
17.9	The State $ n, j, m, l\rangle$	369
17.10	Landé g -factor	369
17.11	Spin and Space Coordinates	372
17.12	Clebsch-Gordon for $j=3/2$	373
17.13	Rigid Rotator in a Step Potential	373
17.14	Spin Dependent Operators for Two Particles	375
18	Scattering - Time Dependent	377
18.1	Cross-section from Experiment	377
18.2	Green's Functions for Free Particle States	378
18.3	Dispersion Relations	379
18.4	Källén-Yang-Feldman Equations	380
18.5	Born Approximation	381
18.6	Scattering in CM and Laboratory Frame	382
18.7	Propagator for a Free Particle	385
18.8	Propagator for Simple Harmonic Oscillator	386

19 Scattering - Time Independent	389
19.1 Equations for Spherical Bessel Functions	389
19.2 Rodrigues Formula: Spherical Bessel Functions	392
19.3 Wronskian for Spherical Bessel Functions	393
19.4 Superposition of Yukawa Potentials	393
19.5 Born Approximation for Gaussian Potential	394
19.6 Born Approximation for Square Well	395
19.7 Phase Shifts for Delta-function Potential	397
19.8 Phase Shifts for Yukawa Potential	399
19.9 Low Energy s -Wave Amplitude	400
19.10 Spherical Potential Shell	402
19.11 Expressions for $j_0(x)$ and $n_0(x)$	403
19.12 Effective Range, Scattering Length	404
19.13 Effective Range, Scattering Length: Yukawa Potential	405
19.14 Shape-independent Parameters	406
19.15 Phase Shifts for Hard Sphere	407
19.16 Resonance for Square Well	411
19.17 Double Slit	412
19.18 Born Approximation: Spherically Symmetric Potential	413
19.19 Scattering from a Separable Potential	414
19.20 Generalized Optical Potential	415
19.21 Free Particle Eigenfunctions	416
19.22 Scattering from an Inverse Square Potential	418
19.23 Neutron-Proton Scattering: Spin Flip	419
19.24 Reflectionless Potential in One Dimension	420
19.25 n - p Scattering: Singlet and Triplet States	422
19.26 Phase Shift, Scattering Length, Etc.	423
19.27 Scattering off a Diatomic Molecule	425
19.28 WKB s -Wave Phase Shift: Attractive Potential	426
19.29 WKB s -Wave Phase Shift: Hulthén Potential	427
19.30 WKB Approximation for Phase Shifts	428
19.31 Zero-Range Potential	431
19.32 Calogero Equation	435
20 Systems of Identical Particles	439
20.1 Periodic Table	439
20.2 Identical $s = 1/2$ Particles in $l = 0, 1$ States	439
20.3 Two Identical $s = 0$ Particles	440
20.4 Identical $s = 1/2$ Particles in Centre of Mass	441
20.5 Heisenberg Field Operator for Bosons	442
20.6 Heisenberg Field Operator for Fermions	444
20.7 Two-body Interaction	444
20.8 Diagonalization of Boson Hamiltonian	445
20.9 Formula for $\exp(-A)B\exp(A)$	447
20.10 Bogoliubov Transformation: Fermions	448
20.11 Diagonalization of Bose Hamiltonian	450

20.12	Diagonalization of Quadratic Hamiltonian	452
20.13	Bogoliubov Transformation: Bose Operators	453
20.14	Density Matrix for a Subsystem	456
20.15	Density Matrix and S-Matrix	457
20.16	Zero Energy Bound States of Two Fermions	458
20.17	Bose Number Operator: Constant of Motion	460
20.18	Bose Operator: More Constants of Motion	461
20.19	The Pauli Problem	462
20.20	Atomic Isotope Effect	464
21	Quantum Statistical Mechanics	467
21.1	Average Energy of Assembly of SHO's	467
21.2	Properties of the Density Matrix	469
21.3	Expectation Values for Spin	470
21.4	Expectation Value for Number of Particles	471
21.5	Spin 1/2 Polarization	472
21.6	Density Matrix for Spin $s=1$	473
21.7	Polarization Vector for Spin j	475
21.8	Composite Density Matrix	476
21.9	Arbitrariness of Composite Density Matrix	477
21.10	Two Energy Levels Bose Gas	479
21.11	Density Matrix: Particles Coupled by Spring	481
