Preface	vii
Chapter 1 Introduction	1
Chapter 2 Synchronization in Two Coupled Chaotic Systems	3
2.1 Pecora-Carroll subsystem decomposition	6
2.2 Separable additive coupling	6
2.3 Synchronization and stability	7
2.3.1 Absolute stability	8
2.3.2 Lipschitz nonlinear systems	10
2.3.3 Circuit theoretical criteria for asymptotical stability . .	11
2.4 Communication and signal processing via synchronization of chaotic systems	13
2.5 Synchronization of nonautonomous systems	18
2.5.1 Unidirectional synchronization scheme for nonautonomous systems	19
2.5.2 Mutual coupling synchronization scheme for nonautonomous systems	20
2.5.3 Synchronization between different systems	22
2.5.4 Synchronizing nonautonomous systems as communica- tion systems	24
2.6 Synchronization via a scalar signal	27
2.6.1 Applications of scalar synchronization to chaotic com- munication system	32
2.7 Adaptive synchronization	33

2.7.1	A general adaptive scheme	35
2.7.2	Two coupled nonlinear systems with linear parameters	36
2.7.3	Two coupled nonlinear systems with multiplicative parameters	40
2.7.4	Examples	42
2.7.5	A generalization of the scheme in Eq. (2.35)	45
2.7.6	Adaptive observers	46
2.8	Discrete-time systems	48
2.9	Further reading	49
Chapter 3 Synchronization in Coupled Arrays of Chaotic Systems		51
3.1	Uniform linear static coupling	55
3.1.1	G is normal	58
3.1.2	G is symmetric	60
3.1.3	General G	61
3.2	Uniform nonlinear static coupling	65
3.3	From stability results to synchronization criteria in coupled arrays	67
3.4	Discrete-time systems	70
Chapter 4 Synchronization in Coupled Arrays: Dynamic Coupling		77
4.1	Synchronization of clusters	81
4.2	Regular and uniform hypergraphs in linearly coupled arrays	88
4.3	Two identical systems coupled by dynamic coupling	96
Chapter 5 Graph Topology and Synchronization		99
5.1	Some coupling configurations	100
5.2	Continuous time systems	103
5.3	Discrete-time systems	107
5.4	Graph coloring via synchronized array of coupled oscillators	108
5.4.1	Coloring two-colorable graphs	109
5.4.2	Coloring arbitrary graphs	111
5.4.3	Antivoter model for graph coloring	114
5.4.4	Calculating the star chromatic number of a graph	116

Chapter 6 Lyapunov Exponents Approach to Synchronization	119
6.1 Continuous-time systems	120
6.2 Discrete-time systems	121
6.3 Three oscillator universal probe for determining synchronization in coupled arrays	122
Appendix A Some Linear Systems Theory and Matrix Theory	131
Appendix B Graph Theoretical Definitions and Notations	141
Appendix C Stability, Lyapunov's Direct Method and Lyapunov Exponents	145
C.1 Lyapunov function and Lyapunov's direct or second method . .	145
C.2 Lyapunov exponents	150
Appendix D Chaotic Circuits and Systems	153
D.1 Nonautonomous chaotic circuits and systems	153
D.1.1 Circuit 1	153
D.1.2 Circuit 2	156
D.2 Autonomous chaotic circuits and systems	157
D.2.1 Chua's oscillator	157
D.2.2 Piecewise-linear Rössler system	159
D.2.3 Hyperchaotic electronic circuit	160
D.2.4 Hyperchaotic Rössler system	161
Bibliography	165
Index	173
