Preface	vii
Introduction	xiii
Chapter 1 Chaotic quantization of field theories	1
1.1 Stochastic quantization	1
1.2 Dynamical generation of the noise	3
1.3 The free Klein-Gordon field with chaotic noise	6
1.4 * Chaotic quantization in momentum space	9
1.5 * Gauge fields with chaotic noise	11
1.6 Distinguished properties of Tchebyscheff maps	13
1.7 * Graph theoretical method	17
1.8 * Perturbative approach	23
Chapter 2 Chaotic strings	27
2.1 Motivation for chaotic strings	27
2.2 Anti-integrable limit of a continuum ϕ^{N+1} -theory	30
2.3 Possible generalizations	33
2.4 Yet another way to derive the chaotic string	35
2.5 Symmetry properties	38
2.6 Stability properties	41
2.7 Fixed points	44
2.8 * Spatio-temporal patterns	47
Chapter 3 Vacuum energy of chaotic strings	57
3.1 Self energy of the $N = 3$ string	57

3.2	Self energy of the $N = 2$ string	60
3.3	Self energy for general N	62
3.4	Interaction energy of chaotic strings	65
3.5	* Double strings	67
3.6	* Rotating strings	69
Chapter 4 Phase transitions and spontaneous symmetry breaking		75
4.1	Some general remarks on phase transitions	75
4.2	Vacuum expectation on 1-dimensional lattices	79
4.3	* Real scalar field on d -dimensional lattices	82
4.4	* Complex scalar field with $U(1)$ symmetry	90
4.5	* Chaotic Higgs field with $SU(2)$ symmetry	92
Chapter 5 Stochastic interpretation of the uncertainty relation		95
5.1	Fluctuations of momenta and positions	95
5.2	Newton's law and self interaction	97
5.3	Coulomb forces and Laplacian coupling	99
5.4	Duality of interpretations	103
5.5	Feynman webs	104
5.6	Physical interpretation of discrete string symmetries	106
5.7	Fluctuations of the metric and a 1+1 dimensional model of quantum gravity	108
Chapter 6 Generalized statistical mechanics approach		113
6.1	Heat bath of the vacuum	113
6.2	* States of maximum information	116
6.3	* States of minimum correlation	118
6.4	Nonextensive statistical mechanics	119
6.5	Energy dependence of the entropic index q	124
6.6	Fluctuations of temperature	126
6.7	Klein-Gordon field with fluctuating momenta	129
Chapter 7 Interaction energy of chaotic strings		131
7.1	Analogue of the Einstein field equations	131
7.2	The 3A string—electric interaction strengths of electrons and d -quarks	133

7.3	The 3B string —weak interaction strengths of neutrinos and u -quarks	136
7.4	High-precision prediction of the electroweak parameters	139
7.5	The 2A string —strong interaction strength at the W -mass scale	141
7.6	The 2B string —the lightest scalar glueball	144
7.7	The $2A^-$ and $2B^-$ strings — towards a Higgs mass prediction	145
7.8	Gravitational interaction	148
Chapter 8 Self energy of chaotic strings		151
8.1	Self interacting scalar field equations	151
8.2	The 3A string —weak and strong interactions of heavy fermion flavors	152
8.3	The 3B string — further mixed states of heavy fermion flavors	156
8.4	The 2A string — further bosons	158
8.5	The 2B string — Yukawa interaction of the top quark	160
8.6	Yukawa and gravitational interactions of all quarks and leptons	162
8.7	Neutrino mass prediction	168
8.8	The $2A^-$ and $2B^-$ strings — bosonic mass ratios	172
Chapter 9 Total vacuum energy of chaotic strings		175
9.1	Hadronization of free quarks	175
9.2	Mesonic states	179
9.3	Baryonic states	182
9.4	* CP violation	186
9.5	Planck scale interpretation	186
9.6	Dark matter	187
Chapter 10 Grand unification		191
10.1	Supersymmetric versus non-supersymmetric theories	191
10.2	A supersymmetric scenario	194
10.3	A non-supersymmetric scenario	196
10.4	Final unification at the Planck scale	198
10.5	Simplification for $\sin^2 \theta_W = \frac{1}{2}$	200
10.6	Bosons at the Planck scale	202
10.7	* Some thoughts on supersymmetry	203
Chapter 11 11-dimensional space-time and quantum gravity		207
11.1	Chaotic dynamics in compactified dimensions	207

11.2	Quantized Einstein field equations	210
11.3	$N = 1$ strings and Minkowski space	213
11.4	Potentials for the $N = 1$ strings and inflation	215
11.5	Black holes, Hawking radiation, and duality	217
11.6	The limit $E \rightarrow \infty$	220
11.7	Brief history of the universe — as seen from chaotic strings . .	222
Chapter 12 Summary		229
12.1	Motivation and main results	229
12.2	The chaotic string dynamics	232
12.3	Vacuum energy of chaotic strings	234
12.4	Fixing standard model parameters	237
12.5	Numerical findings	240
12.6	Physical embedding	247
12.7	Conclusion	249
Bibliography		253
Index		267
