

# Contents

Preface	vii
<b>1 Introduction</b>	<b>1</b>
1.1. Some Basic Concepts of Stochastic Processes and Examples . . . . .	1
1.2. Markovian and Non-Markovian Processes, Markov Chains and Examples . . . . .	6
1.3. Diffusion Processes and Examples . . . . .	17
1.4. State Space Models and Hidden Markov Models . . . . .	21
1.5. The Scope of the Book . . . . .	25
1.6. Complements and Exercises . . . . .	26
References . . . . .	28
<b>2 Discrete Time Markov Chain Models in Genetics and Biomedical Systems</b>	<b>31</b>
2.1. Examples from Genetics and AIDS . . . . .	31
2.2. The Transition Probabilities and Computation . . . . .	38
2.3. The Structure and Decomposition of Markov Chains . . . . .	49
2.4. Classification of States and the Dynamic Behavior of Markov Chains . . . . .	52
2.5. The Absorption Probabilities of Transient States . . . . .	58
2.5.1. The case when $C_T$ is finite . . . . .	60
2.5.2. The case when $C_T$ is infinite . . . . .	62
2.6. The Moments of First Absorption Times . . . . .	64

2.6.1. The case when $C_T$ is finite . . . . .	65
2.7. Some Illustrative Examples . . . . .	66
2.8. Finite Markov Chains . . . . .	82
2.8.1. The canonical form of transition matrix . . . . .	83
2.8.2. Absorption probabilities of transient states in finite Markov chains . . . . .	86
2.9. Stochastic Difference Equation for Markov Chains With Discrete Time . . . . .	86
2.9.1. Stochastic difference equations for finite Markov chains . . . . .	86
2.9.2. Markov chains in the HIV epidemic in homosexual or IV drug user populations . . . . .	89
2.10. Complements and Exercises . . . . .	94
2.11. Appendix . . . . .	102
2.11.1. The Hardy-Weinberg law in population genetics . . . . .	102
2.11.1.1. The Hardy-Weinberg law for a single locus in diploid populations . . . . .	102
2.11.1.2. The Hardy-Weinberg law for linked loci in diploid populations . . . . .	105
2.11.2. The inbreeding mating systems . . . . .	106
2.11.3. Some mathematical methods for computing $A^n$ , the $n$ th power of a square matrix $A$ . . . . .	107
References . . . . .	109

### 3 Stationary Distributions and MCMC in Discrete Time Markov Chains 113

3.1. Introduction . . . . .	113
3.2. The Ergodic States and Some Limiting Theorems . . . . .	115
3.3. Stationary Distributions and Some Examples . . . . .	120
3.4. Applications of Stationary Distributions and Some MCMC Methods . . . . .	126
3.4.1. The Gibbs sampling method . . . . .	127
3.4.2. The weighted bootstrap method for generating random samples . . . . .	130
3.4.3. The Metropolis–Hastings algorithm . . . . .	131
3.5. Some Illustrative Examples . . . . .	136
3.6. Estimation of Linkage Fraction by Gibbs Sampling Method . . . . .	141
3.7. Complements and Exercises . . . . .	152

3.8. Appendix: A Lemma for Finite Markov Chains . . . . .	153
References . . . . .	155
<b>4 Continuous-Time Markov Chain Models in Genetics, Cancers and AIDS</b>	<b>157</b>
4.1. Introduction . . . . .	157
4.2. The Infinitesimal Generators and an Embedded Markov Chain . . .	159
4.3. The Transition Probabilities and Kolmogorov Equations . . . . .	167
4.4. Kolmogorov Equations for Finite Markov Chains with Continuous Time . . . . .	174
4.5. Complements and Exercises . . . . .	190
References . . . . .	195
<b>5 Absorption Probabilities and Stationary Distributions in Continuous-Time Markov Chain Models</b>	<b>199</b>
5.1. Absorption Probabilities and Moments of First Absorption Times of Transient States . . . . .	199
5.1.1. The case when $C_T$ is finite . . . . .	201
5.2. The Stationary Distributions and Examples . . . . .	209
5.3. Finite Markov Chains and the HIV Incubation Distribution . . . .	213
5.3.1. Some general results in finite Markov chains with continuous Time . . . . .	214
5.3.2. Non-homogeneous finite chain with continuous time . . . .	218
5.4. Stochastic Differential Equations for Markov Chains with Continuons Time . . . . .	228
5.4.1. The Feller–Arley stochastic birth-death processes . . . . .	228
5.4.2. The number of initiated cancer tumor cells in the two-stage model of carcinogenesis . . . . .	229
5.4.3. The number of sensitive and resistant cancer tumor cells under chemotherapy . . . . .	230
5.4.4. Finite Markov chains with continuous time . . . . .	231
5.5. Complements and Exercises . . . . .	233
References . . . . .	238
<b>6 Diffusion Models in Genetics, Cancer and AIDS</b>	<b>239</b>
6.1. The Transition Probabilities . . . . .	240
6.2. The Kolmogorov Forward Equation . . . . .	241

6.3.	The Kolmogorov Backward Equation . . . . .	250
6.4.	Diffusion Approximation of Models from Genetics, Cancers and AIDS . . . . .	257
6.5.	Diffusion Approximation of Evolutionary Processes . . . . .	271
6.6.	Diffusion Approximation of Finite Birth-Death Processes . . . . .	284
6.7.	Complements and Exercises . . . . .	286
6.8.	Appendix . . . . .	289
6.8.1.	A general proof of Theorem 6.1 . . . . .	289
6.8.2.	Jacobi polynomials and some properties . . . . .	293
6.8.2.1.	Differential equation for Jacobi polynomials . . . . .	294
6.8.2.2.	An explicit form of Jacobi polynomials . . . . .	295
6.8.2.3.	The Rodrigue's formulae and $E[J_n^2(x; a, b)]$ . . . . .	297
6.8.3.	Some eigenvalue and eigenfunction problems in differential equations . . . . .	299
	References . . . . .	301
<b>7</b>	<b>Asymptotic Distributions, Stationary Distributions and Absorption Probabilities in Diffusion Models</b>	<b>303</b>
7.1.	Some Approximation Procedures and Asymptotic Distributions in Diffusion Models . . . . .	304
7.2.	Stationary Distributions in Diffusion Processes . . . . .	314
7.3.	The Absorption Probabilities and Moments of First Absorption Times in Diffusion Processes . . . . .	324
7.3.1.	Absorption probabilities . . . . .	324
7.3.2.	The first two moments of first passage times in diffusion processes . . . . .	326
7.4.	Complements and Exercises . . . . .	334
	References . . . . .	336
<b>8</b>	<b>State Space Models and Some Examples from Cancer and AIDS</b>	<b>337</b>
8.1.	Some HIV Epidemic Models as Discrete-Time Linear State Space Models . . . . .	338
8.1.1.	A state space model with variable infection for HIV epidemic in homosexual populations . . . . .	340
8.1.2.	A staged state-space model for HIV epidemic in homosexual populations . . . . .	341

8.2. Some State Space Models with Continuous-Time Stochastic System Model . . . . .	344
8.2.1. A state space model for drug resistance in cancer chemotherapy . . . . .	344
8.2.1.1. The stochastic system model . . . . .	344
8.2.1.2. The observation model . . . . .	346
8.2.2. A state space model of HIV pathogenesis . . . . .	346
8.2.2.1. The stochastic system model . . . . .	347
8.2.2.2. The observation model . . . . .	349
8.3. Some State Space Models in Carcinogenesis . . . . .	350
8.3.1. The state space model of the extended multi-event model of carcinogenesis . . . . .	350
8.3.1.1. The stochastic system model . . . . .	351
8.3.1.2. Stochastic differential equations for $I_j$ cells, $j = 0, 1, \dots, k - 1$ . . . . .	352
8.3.1.3. The probability distribution of $T(t)$ . . . . .	353
8.3.1.4. The probability distribution of intermediate foci in carcinogenesis studies . . . . .	355
8.3.1.5. The observation model . . . . .	357
8.3.2. A state space model for extended multiple pathways models of carcinogenesis . . . . .	358
8.3.2.1. The stochastic system model . . . . .	358
8.3.2.2. The observation model . . . . .	360
8.4. Some Classical Theories of Discrete and Linear State Space Models . . . . .	362
8.4.1. Some general theories . . . . .	364
8.4.2. Alternative representation of Kalman filters and smoothers . . . . .	369
8.4.3. Some classical theories for discrete-time linear state space models with missing data . . . . .	370
8.5. Estimation of HIV Prevalence and AIDS Cases in the San Francisco Homosexual Population . . . . .	373
8.5.1. Estimation of parameter values in the San Francisco homosexual population . . . . .	374
8.5.2. The initial distribution . . . . .	375
8.5.3. The variances and covariances of random noises and measurement error . . . . .	376

8.5.4. Estimation results . . . . .	379
8.5.5. Projection results . . . . .	379
8.6. Complements and Exercises . . . . .	380
References . . . . .	382
<b>9 Some General Theories of State Space Models and Applications</b>	<b>387</b>
9.1. Some Classical Theories of Linear State Space Models with Continuous-Time Stochastic System Model . . . . .	387
9.2. The Extended State Space Models with Continuous-Time Stochastic System Model . . . . .	393
9.3. Estimation of CD4 <sup>(+)</sup> T Cell Counts and Number of HIV in Blood in HIV-Infected Individuals . . . . .	396
9.4. A General Bayesian Procedure for Estimating the Unknown Parameters and the State Variables by State Space Models Simultaneously . . . . .	399
9.4.1. Generating data from $P(\mathbf{X} \mathbf{Y}, \Theta)$ . . . . .	402
9.4.2. Generating $\Theta$ from $P(\Theta \mathbf{Y}, \mathbf{X})$ . . . . .	402
9.5. Simultaneous Estimation in the San Francisco Population . . . . .	403
9.5.1. A state space model for the San Francisco homosexual population . . . . .	404
9.5.1.1. The stochastic system model . . . . .	404
9.5.1.2. The observation model . . . . .	405
9.5.2. The initial distribution . . . . .	405
9.5.3. The prior distribution . . . . .	407
9.5.4. Generating $\mathbf{X}$ from the conditional density $P(\mathbf{X} \Theta, \mathbf{Y})$ . . . . .	408
9.5.5. Generating $\Theta$ from the conditional density $P(\Theta \mathbf{X}, \mathbf{Y})$ . . . . .	409
9.6. Simultaneous Estimation in the Cancer Drug-Resistant Model . . . . .	412
9.6.1. Data generation . . . . .	413
9.6.2. The state space model . . . . .	414
9.6.2.1. The probability distribution of the state variables . . . . .	414
9.6.2.2. The conditional likelihood function . . . . .	416
9.6.3. The prior distribution and the conditional posterior distributions of the parameters . . . . .	416
9.6.4. The multi-level Gibbs sampling procedure . . . . .	418
9.6.5. Estimated results . . . . .	419

9.7. Complements and Exercises . . . . .	421
References . . . . .	421
