(Omitted sections consist of questions. A few questions of special interest are listed.)

CHAPTER 1

THE PROBLEM OF CALCULUS

INTRODUCTION	1
1.1 MASS AND LINE DENSITY	1
1.1.1 Mass of a segment and line density at a point	1
1.1.2 Relation between mass and line density. Total and specific quantity	3
1.2 VOLUME AND GROWTH RATE	4
1.2.1 Volume and growth rate	4
1.3 MEASURES OF RECTILINEAR MOTION	6
1.3.1 Distance and velocity	6
1.3.3–4 Velocity and acceleration. Velocity as specific and total quantity	7
1.3.5 Application to a falling body	9
1.4 FORCE AND ITS TOTALS	9
1.4.1–2 Velocity produced by force over time. Momentum and impulse	9
1.4.3–4 Increment of momentum, and force. Newton's second law of motion	11
1.4.5 Q5. Proportionality lemma	14
1.4.6–7 Squared velocity produced by force over distance. Kinetic energy and work	14
1.4.8 Increment of kinetic energy, and force	16
1.4.9 Summary	17
1.5 GEOMETRICAL QUANTITIES ASSOCIATED WITH CURVES	18
1.5.1 Curves and quantities	18
1.5.2–4 Area and height. Applications to figures and graphs	19
1.5.6–9 Rise and slope. Rise and height. Applications to curves and graphs	23

1.6	NUMBERS, VARIABLES, AND FUNCTIONS	28
1.6.1	Variables. Independent variables	28
1.6.2	Dependent variables. Functions	29
1.6.3	Cumulative quantities and functions	31
1.6.5–6	The meaning of “function.” Domain and range	33
1.6.7–8	Notation for functions. Graphs. Monotone functions	35
1.6.9	Functions and calculus	37

CHAPTER 2

INTEGRAL AND DERIVATIVE

	INTRODUCTION	39
2.1	APPROXIMATE CALCULATION OF MASS	40
2.1.1	Formulation of the problem	40
2.1.2	Approximation by successive estimates	40
2.1.4	Example	43
2.2	DESCRIPTION OF MASS AS AN INTEGRAL	46
2.2.1	Mass as the limit of estimates	46
2.2.2–3	The concept of limit. Its insufficiency for determining mass	47
2.2.4	Q3(b). Sum of integers from 1 to n	50
2.2.5	Mass as a sum based on infinitesimal subintervals	51
2.2.7–8	Notation for the sum. The definite integral	52
2.2.9	The definite integral as limit and sum	54
2.3	OTHER INTEGRALS FROM PHYSICS	55
2.3.1	Generality of the integral	55
2.3.2	Integral of growth rate	55
2.3.3	Integrals of velocity and acceleration	57
2.3.4	Integrals of force	57
2.4	INTEGRALS AND GRAPHS OF FUNCTIONS	58
2.4.1	Area the integral of height	58
2.4.2	Demonstration that area is the limit of its estimates	60
2.4.3–5	The integral of a function. Additivity. Existence	62
2.4.7–8	Rise the integral of slope. Neglecting infinitesimals	65
2.5	INDEFINITE INTEGRALS	67
2.5.1	Cumulative quantity as an indefinite integral	67
2.5.2	The indefinite integrals of a function	68
2.6	APPROXIMATE CALCULATION OF LINE DENSITY	69
2.6.1	Formulation of the problem	69
2.6.2	Approximation by successive estimates	70
2.6.3	Example	71

2.7	DESCRIPTION OF LINE DENSITY AS A DERIVATIVE	72
2.7.1	Line density as the limit of estimates	72
2.7.2–3	Line density as a quotient of infinitesimal differentials	74
2.7.4	Line density as limit and quotient. The derivative	76
2.7.5	Example of differentiation	77
2.8	OTHER DERIVATIVES FROM PHYSICS	79
2.8.1	Generality of the derivative	79
2.8.2	Derivative of growing volume	79
2.8.3	Derivatives of location and velocity	80
2.8.4	Force as a derivative	80
2.9	DERIVATIVES AND GRAPHS OF FUNCTIONS	81
2.9.1–2	The derivative of a function. Derivative of $f(x) + \text{constant}$	81
2.9.4	The derivative as slope. Slope the derivative of cumulative rise	82
2.9.6–7	The secant approaches the tangent. Intuition and definition	84
2.9.9–10	Differentiability. One-sided derivatives	87
2.9.12	Height the derivative of cumulative area	89
2.10	SIGNED QUANTITIES AND THE INTEGRAL AND DERIVATIVE IN GENERAL	90
2.10.1	Negative numbers	90
2.10.2–3	Sign of the independent variable and its increments. Directed intervals	90
2.10.4–5	Sign of the dependent variable and its increments. Electric charge	92
2.10.6–8	Negative integrand. Net quantity. Decreasing functions	94
2.10.9	Q12. Newton's third law of motion	99

CHAPTER 3

DIFFERENTIATION AND INTEGRATION: I

	INTRODUCTION	100
3.1	LIMITS AND CONTINUITY	101
3.1.1	Evaluation of limits	101
3.1.2–3	Limit of a sequence and limit of a function	101
3.1.5	Continuity	104
3.1.7	Continuity and differentiability	106
3.1.9–10	Operations with limits. Construction of continuous functions	107
3.1.11	Q8. L'Hospital's rule	109
3.2	DERIVATIVE OF A POLYNOMIAL	109
3.2.1–2	Derivative of x^n	109

3.2.3	Q6. Binomial theorem	112
3.2.4	Derivatives of a constant times a function, a sum of functions, and a polynomial	113
3.3	ELEMENTARY FUNCTIONS AND THEIR DERIVATIVES	115
3.3.1	More differentiable functions	115
3.3.2	The power functions and their derivatives	115
3.3.3	Q6. Limit of x^n . Q7. Irrationality of $\sqrt{2}$	117
3.3.4–5	The trigonometric functions $\sin x$ and $\cos x$. Radians	117
3.3.7–8	Properties and derivatives of trigonometric functions. Polar coordinates	120
3.3.9	Q13. Law of cosines	125
3.3.10–12	Exponential and logarithmic functions and their derivatives. Logarithmic spiral	126
3.4	RULES FOR DIFFERENTIATION CORRESPONDING TO ARITHMETIC OPERATIONS ON FUNCTIONS	130
3.4.1	Review of rules	130
3.4.2	The difference, product, and quotient rules	131
3.4.3	Summary	133
3.5	THE FUNDAMENTAL THEOREM OF CALCULUS	134
3.5.1–2	Integration and differentiation. Correspondence between functions	134
3.5.3–4	The Fundamental Theorem	135
3.5.6–7	Reformulation in terms of primitives. Indefinite integral generalized	137
3.5.8	Picture of the correspondence	139
3.6	THE EVALUATION OF INTEGRALS	140
3.6.1	Evaluation of integrals by means of the Fundamental Theorem	140
3.6.2	Integration of powers of x	141
3.6.3	Integrals of arithmetic combinations of functions	142
3.6.4	The constant of integration	143
3.6.5	Characterizations of uniformity. Linear functions	143
3.7	THE FUNDAMENTAL THEOREM AND THE MEAN VALUE THEOREMS	146
3.7.1–2	Maximum and minimum values. Integral inequalities	146
3.7.4	Proof of Part I of the Fundamental Theorem	148
3.7.5	The mean value theorem	150
3.7.7–8	Derivative at a maximum or minimum. Proof of the theorem	152
3.7.9–10	Proofs of Part II of the Fundamental Theorem	154
3.7.11–12	Estimation. Uniform continuity	156
3.7.14–16	Intermediate values. Integral mean value theorem. Mean value of a function	158
3.8	HIGHER DERIVATIVES AND LINEAR APPROXIMATION	162
3.8.1–2	Higher derivatives of a function	162

3.8.3	Q10. Leibniz's rule	165
3.8.4	Interpretations of the second derivative	165
3.8.6–8	Linear approximation. Second-order error. Estimation of difference	166
3.9	BEHAVIOR OF FUNCTIONS AS REVEALED BY DERIVATIVES	171
3.9.1–2	The first derivative: increase and decrease, local maxima and minima	171
3.9.4–5	Procedure for finding maxima and minima. Rectangle of greatest area	174
3.9.6–7	The second derivative: concavity and inflection	177
3.9.8	Other methods	180

CHAPTER 4

DIFFERENTIATION AND INTEGRATION: II

	INTRODUCTION	183
4.1	COMPOSITE FUNCTIONS AND THEIR DERIVATIVES	183
4.1.1	Composition of functions	183
4.1.3–4	The chain rule	188
4.1.5	Q7. Hyperbolic functions	191
4.1.6	Proof of the chain rule	192
4.2	APPLICATIONS OF THE CHAIN RULE	193
4.2.1	The chain rule and rates of change	193
4.2.3–4	Implicit differentiation. Related rates of change	195
4.2.6	Principle of least time. Reflection and refraction	198
4.2.7	Q10. Cheapest route. Q11. Distance to a graph	201
4.2.8	Derivatives of momentum and kinetic energy	201
4.2.9	Ill-behaved functions: $x^n \sin(1/x)$	202
4.3	INVERSE FUNCTIONS AND THEIR DERIVATIVES	207
4.3.1–2	Inverse of a function. Invertible functions	207
4.3.4–5	Derivative of the inverse	211
4.3.7	Continuity and differentiability of the inverse	214
4.4	DIFFERENTIATION OF THE TRIGONOMETRIC FUNCTIONS AND THEIR INVERSES	215
4.4.1–2	Differentiation of the sine and cosine. Limit of $(\sin h)/h$	215
4.4.4–5	Arc and chord. Area and circumference of a circle	218
4.4.7–8	Inverse trigonometric functions and their derivatives	220
4.4.9	Q10. Inverse hyperbolic functions	225
4.5	DIFFERENTIATION OF FUNCTIONS OF SEVERAL VARIABLES	225
4.5.1–2	Functions of several variables	225

4.5.4–5	Partial derivatives	228
4.5.6	Q11. Method of least squares	231
4.5.7	Differential of a function. Equation of tangent plane	232
4.5.9–10	Composite functions and the chain rule. Implicit differentiation	234
4.6	METHODS OF INTEGRATION	237
4.6.1	Integration in terms of elementary functions	237
4.6.2–4	Substitution, or change of variable. Examples	238
4.6.6–7	Integration by parts. Examples	245
4.6.9	Partial fractions	248
4.7	IMPROPER INTEGRALS	249
4.7.1–2	Improper integrals: infinite intervals, discontinuous functions	249
4.7.4	Definition of the trigonometric functions by means of an integral	253
4.8	INTEGRATION IN THE PLANE AND IN SPACE	255
4.8.1	Integrals over geometrical regions	255
4.8.2–4	Integrals over regions of the plane. Elements of area	256
4.8.5	Q8. Similar figures	264
4.8.6	Integrals over regions of space. Solid of revolution	264

CHAPTER 5

DIFFERENTIAL EQUATIONS OF RECTILINEAR MOTION

	INTRODUCTION	269
5.1	UNIFORM GRAVITATION	270
5.1.1–2	The equation of motion of a particle and its solution	270
5.1.3	Q9. Terminal velocity	274
5.2	SIMPLE HARMONIC MOTION	275
5.2.1–3	The equation of oscillation and a solution: simple harmonic motion	275
5.2.4	Constancy of the frequency. The pendulum	281
5.2.5	Q12. Measurement of g	283
5.3	ENERGY	283
5.3.1	Motion as a result of difference of height	283
5.3.2	Potential energy	284
5.3.3–4	Potential energy, work, and kinetic energy. Conservation of energy	286
5.3.5	Uniform gravitation	289
5.3.6	Differential equation of motion from conservation of energy	291
5.3.7	Simple harmonic motion	292

5.4	INVERSE-SQUARE GRAVITATION	295
5.4.1	The inverse-square law and the equation of motion	295
5.4.2–4	Motion of a particle. Escape velocity. Energy equation and solutions	297

CHAPTER 6

THE DIFFERENTIAL EQUATION OF INTRINSIC GROWTH: THE EXPONENTIAL AND LOGARITHMIC FUNCTIONS

	INTRODUCTION	304
6.1	INTRINSIC GROWTH	304
6.1.1	Extrinsic and intrinsic uniform growth	304
6.1.2	The differential equation of intrinsic growth	306
6.1.3–5	Growth functions. A special case	308
6.2	THE EXPONENTIAL AND LOGARITHMIC FUNCTIONS AND THEIR APPLICATIONS	312
6.2.1–2	Solution of the special growth equation. Logarithm and exponential	312
6.2.3–4	The number e as a limit. Theorem of the means	315
6.2.5–6	General growth function. Exponential and logarithm. Powers	317
6.2.7–9	Applications: growth and decay, air pressure, self-similar shell	319
6.2.10	Q12. Harmonic series. Q18. Ohm's law. Q19. Cell division. Q22. Compound interest	325

CHAPTER 7

LENGTH AND CURVATURE OF PLANE CURVES

	INTRODUCTION	327
7.1	ARC LENGTH AND CURVATURE	328
7.1.1–3	Arc length: curve and polygon, arc and chord	328
7.1.4–6	Curvature. Circle and radius of curvature	332
7.1.7	Invariance of arc length and curvature	336
7.2	LENGTH AND CURVATURE OF A GRAPH	337
7.2.1–2	Differential of arc length. Arc length as an integral. Ellipse	337
7.2.3	Derivation of the arc-length integral. Equivalence of characterizations	342

7.2.4–5	Curvature of a graph in terms of derivatives. Examples	345
7.2.6	Q13. Curve not of finite length	350
7.3	LOCAL GEOMETRY	350
7.3.1–4	Curvature in terms of tangent and normal coordinates. Second derivative as a limit	350
7.3.5	Geometrical interpretations and applications	355
7.4	PARAMETRIC REPRESENTATION	358
7.4.1	Parametric representation of curves. Time as parameter	358
7.4.2–5	Expressions for length and curvature. Length as parameter. Ellipse	360
7.4.6–7	Intrinsic equation of a curve. Involute of circle. Logarithmic spiral	367
7.4.8	Q10. Rotation of axes	373
7.5	LINE INTEGRALS AND CURVILINEAR MOTION	374
7.5.1–4	Line integrals. Integration with respect to a parameter. Work. Surface area	374
7.5.5–7	Velocity and acceleration along a curve. Gravitating moon	382
7.5.8	Q10. Parabolic trajectory. Q14. Area of a closed curve	386

CHAPTER 8

REPRESENTATION OF FUNCTIONS BY INFINITE TAYLOR SERIES

	INTRODUCTION	389
8.1	POLYNOMIAL APPROXIMATION AND THE TAYLOR SERIES	389
8.1.1–2	The first three approximating polynomials	389
8.1.3	The Taylor polynomial of order n	393
8.1.4–6	The Taylor series. Series of e^x , $\sin x$, $\cos x$. Euler's formula	395
8.2	TAYLOR'S THEOREM AND THE CONVERGENCE OF TAYLOR SERIES	400
8.2.1–5	Taylor's theorem. Corollaries	400
8.2.6–8	Convergence of Taylor series. Series of e^x , $\sin x$, $\cos x$, $1/(1+x)$, $\log(1+x)$, $(1+x)^\alpha$, $\arctan x$	406
8.2.9	Envoi	416
	TOPICAL SUMMARY	419
	APPENDIX 1: CONVERSION TO CGS UNITS	429
	APPENDIX 2: THE EPIGRAPHS	431
	ANSWERS	435
	INDEX	505
