

Contents

1	Introduction and basic concepts	5
1.1	Introduction	5
1.2	Amplification factor	7
1.3	Equilibrium scour depth and time scale of scour	8
1.4	Clear-water scour and live-bed scour	9
1.5	Local and global scour	11
1.6	References	12
2	Scour below pipelines	15
2.1	Onset of scour	16
2.1.1	Mechanism of onset of scour. Seepage flow and piping underneath the pipe	16
2.1.2	Criterion for the onset of scour	23
2.2	Tunnel erosion	30
2.3	Two-dimensional scour	32
2.3.1	Lee-wake erosion	33
2.3.2	Scour depth	38
2.3.3	Width of scour hole	66
2.3.4	Time scale	69
2.3.5	Change in wave climate	75
2.4	Three-dimensional scour	76
2.4.1	Scour, backfilling, and self-burial in the free-span areas	77
2.4.2	Scour, backfilling and self-burial at span shoulders . . .	96
2.4.3	Stimulated self-burial of pipelines	108
2.5	Scale effects	111
2.6	Scour protection for pipelines	113
2.7	Mathematical modelling	117
2.7.1	Potential-flow models	117

2.7.2	Advanced models	125
2.7.3	Integrated models	137
2.8	References	138
3	Scour around a single slender pile	149
3.1	Flow around a slender pile	150
3.1.1	Horseshoe vortex in steady currents	151
3.1.2	Horseshoe vortex in waves	160
3.1.3	Lee-wake vortex flow	169
3.1.4	Contraction of streamlines	174
3.2	Scour around a slender pile	174
3.2.1	Scour around a slender pile in steady currents	174
3.2.2	Scour around a slender pile in waves	188
3.2.3	Scour around a cone-shaped object	205
3.3	Time scale	206
3.4	Scour protection	212
3.5	Mathematical modelling	218
3.6	References	228
4	Scour around a group of slender piles	239
4.1	Pile group in steady currents	239
4.1.1	Two-pile group	240
4.1.2	Three-pile group	247
4.2	Pile group of in waves	248
4.2.1	Two-pile group	249
4.2.2	Three-pile group	257
4.2.3	Four-pile group	258
4.2.4	Effect of the KC number	260
4.3	Global and local scour at pile groups	264
4.4	References	272
5	Examples of more complex configurations	275
5.1	Scour at pile-supported offshore structures	276
5.2	Scour characteristics	279
5.3	References	285

6	Scour around large piles	287
6.1	Large pile. Diffraction regime	288
6.2	Phase-resolved flow around the pile	291
6.3	Steady streaming around the pile	294
6.4	Scour around the pile	301
6.4.1	Mechanism of streaming-induced scour	302
6.4.2	Influence of KC and D/L	305
6.4.3	Influence of combined waves and current, and cross-sectional shape	316
6.4.4	Scour around a cone-shaped object	324
6.5	References	325
7	Scour around breakwaters	329
7.1	Scour at the trunk section of a breakwater	333
7.1.1	Scour at the trunk section of a vertical-wall breakwater	333
7.1.2	Scour at the trunk section of a rubble-mound breakwater	347
7.1.3	Scour protection at the trunk section of a breakwater .	361
7.1.4	Mathematical modelling of scour at the trunk section of a breakwater	365
7.2	Scour around the head of a breakwater	371
7.2.1	Scour around the head of a vertical-wall breakwater . .	371
7.2.2	Scour around the head of a rubble-mound breakwater .	377
7.2.3	Scour protection at the head section	385
7.2.4	Influence of finite length of breakwater	387
7.3	Scour at jetties	390
7.4	References	391
8	Scour at seawalls	399
8.1	Scour by normally incident breaking waves	402
8.2	Scour by normally incident nonbreaking waves	415
8.3	Scour induced by wave overtopping	417
8.4	Scour protection	419
8.5	References	419
9	Ship-propeller scour	423
9.1	Scour due to unconfined propeller wash	426
9.2	Scour due to confined propeller wash	431
9.3	Scour protection	436

9.4	References	442
10	Impact of liquefaction	445
10.1	Physics of liquefaction	446
10.1.1	Liquefaction induced by the buildup of pore pressure. Residual liquefaction	446
10.1.2	Liquefaction induced by the upward-directed pressure gradient. Momentary liquefaction	448
10.2	Biot equations and their solutions	450
10.2.1	Biot equations	450
10.2.2	Stresses in soil under a progressive wave	455
10.3	Residual liquefaction	464
10.3.1	Peacock and Seed's (1968) experiment	464
10.3.2	Equation governing the buildup of pore pressure	469
10.3.3	Solution to the equation of buildup of pore pressure	474
10.4	Momentary liquefaction	483
10.4.1	General description	483
10.4.2	The case of completely saturated soil	484
10.4.3	The case of unsaturated soil	485
10.5	Sinking/floatation of pipelines	487
10.5.1	The case of residual liquefaction	488
10.5.2	The case of momentary liquefaction	499
10.6	Sinking of armour blocks in liquefied soil	500
10.6.1	The case of residual liquefaction	500
10.6.2	The case of momentary liquefaction	503
10.7	Appendix I. Relationships among soil properties	504
10.8	Appendix II. Ranges of soil properties	507
10.9	Appendix III. Hsu & Jeng coefficients	509
10.10	References	511
	Appendix A Small amplitude, linear waves	521
