

CONTENTS

PREFACE	v
CHAPTER 1 COMPLEX NUMBERS AND COMPLEX FUNCTIONS	
§1.1 Complex Numbers	1
1.1.1 Field of complex numbers	1
1.1.2 Geometric representation of complex numbers	3
1.1.3 Stereographic projection, complex sphere, point at infinity and extended (complex) plane	7
Exercises 1.1	8
§1.2 Functions of a Complex Variable	10
1.2.1 Concept of functions of a complex variable	10
1.2.2 Limit and continuity of complex functions	11
1.2.3 Concept of homotopy and connectedness of regions	13
1.2.4 Argument function	17
Exercises 1.2	23
§1.3 Complex Sequences and Complex Series	24
1.3.1 Sequences and series with complex terms	24
1.3.2 Sequences and series of complex functions	26
Exercises 1.3	26
Exercises of Chapter 1	27
CHAPTER 2 FUNDAMENTALS OF ANALYTIC FUNCTIONS	
§2.1 Analytic Functions	28
2.1.1 Derivative and its geometric meaning	28
2.1.2 Concept of analytic functions	32
Exercises 2.1	35
§2.2 Some Elementary Analytic Functions	36
2.2.1 Polynomials and rational functions	36

2.2.2	Exponential functions	36
2.2.3	Trigonometric functions and hyperbolic functions	38
2.2.4	Logarithmic functions	40
2.2.5	Power functions and radical functions	44
2.2.6	Uniformization of general multi-valued functions	47
2.2.7	Logarithm of rational functions	52
2.2.8	Radicals of rational functions	55
2.2.9	Anti-trigonometric functions and anti-hyperbolic functions	58
	Exercises 2.2	59
	Exercises of Chapter 2	61
	CHAPTER 3 COMPLEX INTEGRALS	
§3.1	The Concept of Complex Integrals	63
3.1.1	Definition of complex integrals and their calculations	63
3.1.2	Basic properties of complex integrals	67
	Exercises 3.1	68
§3.2	Fundamental Theorems	70
3.2.1	Cauchy theorem on integrals	70
3.2.2	Primitive functions	76
	Exercises 3.2	80
§3.3	Basic Formulas	81
3.3.1	Cauchy integral formula	81
3.3.2	Cauchy formula of differentiation	83
3.3.3	Cauchy inequality	86
3.3.4	Morera theorem	86
	Exercises 3.3	87
§3.4	Improper Complex Integrals	88
3.4.1	Definition of improper complex integrals	88
3.4.2	Cauchy principal value integrals	91
3.4.3	Singular integrals of higher order	95
	Exercises 3.4	97
	Exercises of Chapter 3	98

CHAPTER 4 THEORY OF SERIES FOR ANALYTIC FUNCTIONS

§4.1	General Theory	100
4.1.1	Integration and differentiation term by term for series with complex functional terms	100
4.1.2	Power series and its sum function	102
	Exercises 4.1	104
§4.2	Taylor Expansion and Uniqueness Theorem	105
4.2.1	Taylor expansion of analytic functions	105
4.2.2	Uniqueness of analytic functions	113
4.2.3	Maximum modulus principle	115
	Exercises 4.2	117
§4.3	Laurent Expansion and Isolated Singularities	118
4.3.1	Laurent expansion of analytic functions	118
4.3.2	Methods for determining Laurent expansions	122
4.3.3	Isolated singularities of analytic functions	126
4.3.4	Entire functions and meromorphic functions	132
	Exercises 4.3	135
	Exercises of Chapter 4	137

CHAPTER 5 THEORY OF RESIDUE

§5.1	Residue and its Evaluation	138
5.1.1	Concept of residue	138
5.1.2	Residue at the point at infinity	143
5.1.3	The case of boundary points	145
	Exercises 5.1	147
§5.2	Residue Theorem and its Generalization	148
5.2.1	Residue theorem	148
5.2.2	Extended residue theorem	151
	Exercises 5.2	154
§5.3	Applications to Evaluation of Integrals	155
5.3.1	Application of single-valued analytic functions	156
5.3.2	Application of multi-valued analytic functions	162
5.3.3	Application of singular integrals of higher order	169

Exercises 5.3	170
§5.4 Argument Principle and Rouché Theorem	170
5.4.1 Argument principle	171
5.4.2 Rouché theorem	173
Exercises 5.4	175
Exercises of Chapter 5	175
CHAPTER 6 ANALYTIC EXTENSION	
§6.1 Concept and Method of Analytic Extension	178
6.1.1 Basic concept of analytic extension	178
6.1.2 Extension through arc	180
6.1.3 Extension by power series	185
Exercises 6.1	190
§6.2 Complete Analytic Functions and Monodrome Theorem	191
6.2.1 Complete analytic functions and Riemann surfaces	191
6.2.2 Monodrome theorem	193
Exercises 6.2	198
Exercises of Chapter 6	198
CHAPTER 7 CONFORMAL MAPPING	
§7.1 Fractional Linear Mapping	200
7.1.1 Conformal property	201
7.1.2 Group of mappings, fixed points	203
7.1.3 Determination of a FLM, invariance of cross-ratio	204
7.1.4 Preservation of circles	205
7.1.5 Preservation of symmetric points	208
7.1.6 Three special FLMs	211
Exercises 7.1	215
§7.2 General Theory of Conformal Mapping	215
7.2.1 Region preserving for analytic functions and properties of univalent functions	216
7.2.2 Riemann mapping theorem and Schwarz lemma	219
7.2.3 Boundary correspondence theorem	223

Exercises 7.2	225
§7.3 Some Elementary Function Mappings	225
7.3.1 Mappings by exponential or logarithmic functions	226
7.3.2 Mappings by power functions	227
7.3.3 Jukovsky function	230
7.3.4 Mapping by the cosine function	232
Exercises 7.3	234
§7.4 Miscellaneous Examples	235
7.4.1 Determine regions by given functions	235
7.4.2 Determine mapping functions by given corresponding regions	236
Exercises 7.4	248
Exercises of Chapter 7	249
CHAPTER 8 HARMONIC FUNCTIONS	
§8.1 Concept of Harmonic Functions and their Properties	252
8.1.1 Relationship between harmonic functions and analytic functions	252
8.1.2 Extremum principle	256
8.1.3 Poisson formula	257
Exercises 8.1	259
§8.2 Dirichlet Problems	260
8.2.1 General Dirichlet problems	260
8.2.2 Properties of Poisson integral	261
8.2.3 Dirichlet problem on a circular region	264
8.2.4 Dirichlet problem on the upper half-plane	265
Exercises 8.2	266
§8.3 Schwarz-Christoffel Formula	267
8.3.1 General formula	267
8.3.2 Some examples	272
Exercises 8.3	276
Exercises of Chapter 8	277
CHAPTER 9 ANALYTIC FUNCTIONS APPLIED TO PLANAR FLOW	
§9.1 Meaning of Analytic Functions in Fluid Mechanics	280

9.1.1	Complex flow	280
9.1.2	Complex potential	282
9.1.3	Sources and vortices	284
	Exercises 9.1	287
§9.2	Flow Around a Cylinder	287
9.2.1	Flow around a circular disk	287
9.2.2	Flow around a general region	290
9.2.3	Jukovsky formula of lift-force	292
	Exercise 9.2	294
	REFERENCES	295
	INDEX	297
