

TABLE OF CONTENTS

PREFACE	xiii
ACKNOWLEDGMENTS	xiv
CHAPTER 1: LIGHT	
1.1 Introduction	1
1.2 The Electromagnetic Spectrum	1
1.2.1 Wave Motion	1
1.2.2 Wavelength and Frequency Range	2
1.2.3 Measurement of the Velocity of Light	3
1.3 Light Sources	4
1.3.1 Self-Luminous	4
1.3.1.1 Incandescent Sources	4
1.3.1.2 Electric Arcs and Discharges	4
1.3.1.3 Fluorescent Lamps	4
1.3.1.4 Lasers	4
1.3.2 Light Reflecting Sources	4
1.4 Optical Media	4
1.4.1 Transparent, Colored and Translucent Materials	5
1.4.2 Reflecting and Opaque Materials	5
1.5 Point and Extended Sources	5
1.6 Rectilinear Propagation of Light	6
1.6.1 Pinhole Camera	6
1.6.2 Propagation of Light in Nonhomogeneous Media	6
1.7 The Corpuscular and Wave Theory of Light	7
1.8 Umbra, Penumbra and Eclipses	8
1.9 Real and Virtual Objects and Images	10
1.10 Stops	10
1.10.1 Field Stop	10
1.10.2 Aperture Stop	10
1.10.3 Baffles	11
1.11 Optical System	11
1.11.1 Vergence and Diopters	11
1.12 Pencils and Beams of Light	12
1.12.1 Point Source	12
1.12.2 Extended Source	12
1.13 Visual Angle	12
CHAPTER 2: REFLECTION AT PLANE MIRRORS	
2.1 Reflection	15
2.2 The Law of Reflection	15
2.2.1 Mirror Rotation	16
2.2.1.1 The Galvanometer	16
2.2.1.2 Measurement of Mirror Rotation Angles	16

2.2.1.3	Hadley's Sextant	17
2.3	Image of a Point Formed by a Plane Mirror	17
2.3.1	Image of an Extended Object	18
2.3.2	Inversion and Reversion of Reflected Images	18
2.4	Constant Deviation by Two Inclined Mirrors	19
2.4.1	Applications of Constant Angles of Deviation	20
2.5.	Multiple Images Produced by Two Inclined Mirrors	21
2.5.1	Construction of Images	21
2.5.1.1	Image Series J	21
2.5.1.2	Image Series K	23
2.5.2	Number of J and K Images	23
2.5.3	The Kaleidoscope	25
2.6.	Ray Paths to the Eye	26
2.7.	Field of View of a Plane Mirror	26
2.8	Reflection According to Newton's Corpuscular Theory	28
2.9.	Reflection According to Huygens' Wave Theory	29
CHAPTER 3: REFRACTION OF LIGHT		
3.1	The Law of Refraction	33
3.2	The Reversibility of Light	33
3.3	Refraction and Particle Motion	33
3.3.1	Vector Diagram - Perpendicular Component Increased by Refraction	34
3.3.2	Vector Diagram - Tangential Component Decreased by Refraction	34
3.3.3	Huygens' Construction for Refraction	35
3.4	Absolute Index of Refraction and Snell's Law	36
3.5	Construction of Refracted Ray	37
3.6	Deviation of the Refracted Ray	38
3.7	Dispersion	38
3.8	Total Internal Reflection	38
3.9	Optical Path Length	39
3.10	Fermat's Principle	40
CHAPTER 4: REFRACTION BY PLANES, PLATES AND PRISMS		
4.1	Exact Ray Tracing Through a Plane Refracting Surface	43
4.2	Exact Ray Tracing Through a Parallel Plate	44
4.3	Displacement of Rays Obliquely Incident on a Tilted Plate	46
4.4	Refraction Through Prisms	47
4.5	Prism Geometry	48
4.6	Limits to Prism Transmission: Grazing Incidence and Emergence	48
4.7	Minimum Deviation by a Prism	49
4.8	Calculation of the Path of a Ray Through a Prism	50
4.9	Calculation of the Total Deviation by a Prism	50
CHAPTER 5: PARAXIAL REFRACTION AT PLANES, PLATES AND PRISMS		
5.1	Paraxial Refraction at a Plane Surface	53
5.2	Paraxial Image Formation by Parallel Plates	54
5.3	Reduced Thickness	56

5.4	Thin Prisms	56
5.5	Ophthalmic Prisms, Centrads and the Prism-Diopter	57
5.7	Obliquely Combined Prisms	59
5.8	Risley Prisms	61

CHAPTER 6: REFRACTION AND REFLECTION AT SPHERICAL SURFACES

6.1	Sign Convention	65
6.2	Refraction at a Single Spherical Refracting Surface	66
6.2.1	The Paraxial Image Equation	66
6.2.2	Focal Points and Focal Lengths	67
6.2.3	Refracting Power	69
6.2.4	Construction of On-Axis Image Points	69
6.2.5	Construction of the Focal Points	70
6.2.6	Construction of Off-Axis Image Points	71
6.2.7	Image Positions as an Object Approaches the Surface	72
6.2.8	Possible Positions of the Image	73
6.2.9	Lateral Magnification	73
6.3	The Image Equation for Plane Surfaces	74
6.4	Newtonian Equations	74
6.5	The Focal Planes and Focal Images of a Spherical Refracting Surface	75
6.6	The Smith-Helmholtz Formula or Lagrange Invariant	76
6.7	Reflection by Spherical Mirrors	76
6.7.1	The Paraxial Image Equation	76
6.7.2	The Focal Points of a Spherical Mirror	78
6.7.3	Construction of Axial Image Points for Spherical Mirrors	79
6.7.4	Construction of Focal Points of a Spherical Mirror	79
6.7.5	Construction of Off-Axis Image Points Formed by a Mirror	79
6.7.6	Image Positions as an Object Approaches a Spherical Mirror	80
6.7.7	Possible Positions of the Image Formed by a Spherical Mirror	81
6.7.8	Lateral Magnification by Spherical Mirrors	81
6.7.9	Newtonian Equations for a Spherical Mirror	81
6.7.10	The Field of View of a Spherical Mirror	82
6.8	Angular Magnification	83
6.9	Vergence, Power and Curvature	84
6.9.1	Vergence and Power	84
6.9.2	Curvature and Vergence	85
6.9.3	Curvature and Sagitta	86
6.9.4	The Correction of Lens Measure Readings	87

CHAPTER 7: THIN LENSES

7.1	Convex and Concave Lenses	93
7.2	Lens Nomenclature	94
7.3	The Optical Center of a Lens	94
7.4	The Thin Lens	95
7.5	The Thin Lens Equation	95
7.6	Focal Lengths	97
7.7	Construction of the Off-Axis Image Point	97

7.8	Lateral Magnification	98
7.9	Vergence Equations and Power of a Thin Lens	99
7.9.1	Thin Lens Power in Non-Uniform Medium	99
7.10	Object and Image Formation by a Thin Lens	100
7.10.1	Positive Lenses	100
7.10.2	Negative Lenses	100
7.10.3	Applications of Lenses with Various Conjugates	102
7.10.4	The Minimum Separation Between a Real Object and Its Real Image	102
7.11	Newtonian Equations	103
7.12	The Focal Planes and Focal Images of a Thin Lens	103
7.13	Prismatic Power of a Thin Lens	104
7.14	Stops and Pupils of Lens Systems	105
7.14.1	Procedure for Finding the Stops, Pupils and Field of View of a Thin Lens	106
CHAPTER 8: ROTATIONALLY SYMMETRICAL SYSTEMS		
8.1	Introduction	111
8.2	Paraxial Construction of the Image	111
8.3	Paraxial Calculation of Images Through an Optical System	112
8.4	The Vergence Form of the Refraction and Transfer Equations	115
8.4.1	Iterative Use of the Vergence Equations	115
CHAPTER 9: ASTIGMATIC LENSES		
9.1	Astigmatic Images	119
9.2	Curvature and Power in Principal and Normal Sections	121
9.3	Power in Oblique Meridians of a Cylinder	123
9.3.1	The Oblique Power Equation	123
9.4	Thin Astigmatic Lenses	124
9.4.1	Forms of Astigmatic Lenses	125
9.5	Transposition of Flat Prescriptions	127
9.6	The Circle of Least Confusion and the Spherical Equivalent Lens	128
9.7	The Circle of Least Confusion for Any Object Distance	129
9.8	The Lengths of the Focal Lines and the Diameter of the CLC	130
9.9	Obliquely Combined Cylinders	130
CHAPTER 10: THICK LENS SYSTEMS: PART I		
10.1	Introduction	139
10.2	The Cardinal Points	139
10.2.1	The Principal Planes and Points	139
10.2.2	The Nodal Points	140
10.2.3	Construction of the Nodal Points	141
10.2.4	Other "Cardinal" Points	143
10.3	The Newtonian Equations for a Thick System	143
10.4	The Refraction Equations for a Thick System	144
10.5	The Lateral Magnification of a Thick Lens	144
10.6	Summary of Vergence Equations for a Thick Lens System	145
10.7	Lateral, Axial and Angular Magnification	145
10.7.1	Lateral Magnification: Y	145

10.7.2 Axial Magnification: X	145
10.7.3 Angular Magnification: M_a	146
CHAPTER 11: THICK LENS SYSTEMS: PART II	
11.1 The Gullstrand Equations	149
11.1.1 Equivalent Power	149
11.1.2 The Position of the Second Focal Point F'	151
11.1.3 The Position of the Second Principal Point H'	151
11.1.4 The Positions of the First Focal and Principal Points F and H	151
11.2 Distances Referred to Principal Planes	152
11.2.1 Summary of the Gullstrand Equations	152
11.2.1.1 The Positions of the Nodal Points N and N'	153
11.2.2 The Effect of Lens Thickness on the Positions of the Principal Planes	154
11.2.3 The Effect of Lens Shape on the Position of the Principal Planes	155
11.2.4 Telephoto and Wide-Angle Lenses	155
11.3 Vertex Power	157
11.4 Vertex Power and Ophthalmic Lenses	157
11.5 Effective Power	158
11.5.1 The Relationship of Effective Power to Vertex Power	159
11.6 Combination of Two Thick Lens	159
11.7 The Gullstrand Schematic Eye	161
11.7.1 Procedure for Calculating Cardinal Points of the Schematic Eye	161
11.8 Purkinje Images	164
11.8.1 Calculation of Purkinje Image I	164
11.8.2 Calculation of Purkinje Image II	165
11.8.3 Calculation of Purkinje Image III	166
CHAPTER 12: STOPS, PUPILS AND PORTS	
12.1 Types of Stops	173
12.2 Pupils	173
12.3 The Field Stop and the Entrance and Exit Ports	174
12.4 Field of View and Vignetting	175
12.5 Procedure for Finding the Stops, Pupils, Ports and Field of View	176
CHAPTER 13: NUMERICAL APERTURE, f-NUMBER, AND RESOLUTION	
13.1 Numerical Aperture	183
13.2 f-Number	183
13.3 Angular Resolution	185
13.4 Linear Resolution	187
13.5 Resolution Charts	187
13.6 Snellen Charts	188
13.7 Modulation Transfer Function	189
13.8 The Numerical Aperture of a Fiber Optic	191
CHAPTER 14: MAGNIFIERS AND MICROSCOPES	
14.1 Introduction	195
14.2 Visual Angle and Angular Magnification	195

14.3	The Magnifier or Simple Microscope	195
14.3.1	Nominal Magnification	196
14.3.2	Maximum Magnification	197
14.3.3	A General Equation for Magnification	198
14.3.4	The Accommodation Required to View the Image	199
14.3.5	The Field of View of Magnifiers	199
14.3.6	Types of Magnifiers	200
14.4	The Compound Microscope	200
14.4.1	Magnification by a Microscope	201
14.4.2	Maximum Magnification by a Microscope	202
14.4.3	The Compound Microscope as a Simple Magnifier	202
14.4.4	The Stops of a Microscope	202
14.5	Numerical Aperture and Resolution of Microscopes	203
14.6.1	Maximum Usable Magnification of a Microscope	204
14.6.2	Resolution, Wavelength and the Electron Microscope	205
14.6.3	Depth of Focus of Microscope	205
CHAPTER 15: TELESCOPES		
15.1	Introduction	209
15.2	Refracting Telescopes	210
15.2.1	The Astronomical or Keplerian Telescope	210
15.2.1.1	Angular Magnification	210
15.2.1.2	The Field of View of the Astronomical Telescope	212
15.2.1.3	Field Lenses	213
15.2.2	The Terrestrial Telescope	214
15.2.2.1	Relay Lenses	214
15.2.3	The Galilean Telescope	214
15.2.3.1	Field and Opera Glasses	215
15.2.4	The Prism Binocular	216
15.2.4.1	Stereoscopic Range Through Binoculars	217
15.3	Reflecting Telescopes	218
15.3.1	Newtonian Telescope	218
15.3.2	Gregorian Telescope	219
15.3.3	Cassagrainian Telescope	219
15.4	Catadioptric Telescopes	219
15.5	The Maximum Useful Magnification of a Telescope	219
CHAPTER 16: CAMERAS AND PROJECTORS		
16.1	Pinhole Camera and Camera Obscura	223
16.2	Types of Cameras	223
16.3	Camera Lenses	225
16.3.1	Field of View of Cameras	225
16.3.2	Depth of Field and Focus	225
16.3.3	Hyperfocal Distance	227
16.4	The Paraxial Design of a Zoom Lens	229
16.5	Paraxial Design of a Telephoto Lens	230
16.6	Optical Projection Systems	231

CHAPTER 17: OPHTHALMIC INSTRUMENTS

17.1	Introduction	235
17.2	Ophthalmometer	235
17.2.1	Optical Principle	235
17.2.1.1	Fixed Mire-Variable Image Size Ophthalmometers	236
17.2.1.2	Variable Mire-Fixed Image Ophthalmometers	236
17.2.2	Radius of Curvature	236
17.2.3	Refractive Power of the Cornea	237
17.3	Doubling Principle	238
17.3.1	Fixed Mire Size Ophthalmometer	239
17.3.2	Adjustable Mire Size Ophthalmometer	241
17.4	Badal Optometer	242
17.4.1	Badal Target Position and Ametropia	243
17.4.2	Alternate Arrangement of Badal Optometer	244
17.4.3	Telecentric Systems	244
17.5	The Lensometer	245
17.5.1	Lensometer Target and Reticle	247
17.6	Slit Lamp or Biomicroscope	247

CHAPTER 18: DISPERSION AND CHROMATIC ABERRATION

18.1	Introduction	251
18.2	Wavelength and Index of Refraction	251
18.2.1	Index of Refraction	252
18.2.2	Dispersion	253
18.3	Optical Glass	254
18.3.1	Crown and Flint Glasses	254
18.4	Chromatic Aberration of Thin Prisms	255
18.5	Achromatic Prisms	256
18.6	The Longitudinal Chromatic Aberration of Lenses	257
18.6.1	Longitudinal Chromatic Aberration in Diopters	258
18.6.2	Linear Longitudinal Chromatic Aberration	258
18.7	Achromatic Lenses in Contact	260
18.8	Transverse Chromatic Aberration	261
18.8.1	Linear Transverse Chromatic Aberration	261
18.8.2	Transverse Chromatic Aberration in Prism Diopters	263
18.9	Achromatic Combination of Two Air-Spaced Lenses	263
18.9.1	The Huygens Eyepiece	264
18.9.2	The Ramsden Eyepiece	266
18.9.3	The Kellner and Other Eyepieces	267

CHAPTER 19: TRIGONOMETRIC RAY TRACING

19.1	Introduction	271
19.2	Ray Tracing Sign Conventions and Nomenclature	271
19.3	Ray Tracing Equations	272
19.3.1	Transfer Equations	275
19.4	Ray Tracing Through a Series of Surfaces	276

19.5	Longitudinal and Transverse Spherical Aberration	277
19.6	Ray Trace Calculations for a Pencil of Rays	278
19.7	A Format for Tracing Rays Through a Lens	278
19.8	Image Evaluation	278
19.8.1	Spherical Aberration Curves	278
19.8.2	Ray Intercept Curves	280
19.8.3	Spot Diagrams	280
19.8.4	Radial Energy Diagrams	281
19.8.5	Knife Edge Distributions	282
19.9	Graphical Ray Trace	282
CHAPTER 20: MONOCHROMATIC ABERRATIONS		
20.1	Introduction	285
20.2	Third Order Theory	285
20.3	Third Order Aberration Polynomial	286
20.3.1	The Spherical Aberration Terms of the Polynomial	286
20.3.2	Spherical Aberration of a Thin Lens	287
20.3.3	Spherical Aberration and Lens Bending	288
20.3.4	Correction of Spherical Aberration	290
20.4	The Coma Terms of the Aberration Polynomial	291
20.4.1	Coma of a Thin Lens	293
20.4.2	The Sine Condition	293
20.5	Astigmatism	295
20.5.1	Astigmatism by a Spherical Refracting Surface	295
20.5.2	Astigmatism by a Thin Lens	297
20.6	Petzval Curvature	297
20.6.1	Petzval Curvature of a Refracting Surface	297
20.6.2	Petzval Curvature of a Series of Surfaces	298
20.6.3	Petzval Curvature of a Thin Lens in Air	299
20.6.4	The Petzval Condition for Flattening the Field	299
20.7	Astigmatism and Petzval Curvature Polynomial Terms	299
20.8	Distortion	300
20.8.1	The Third Order Distortion Polynomial Term	300
20.8.2	The Tangent Condition	301
BIBLIOGRAPHY		305
INDEX		309
