

CONTENTS

CHAPTER A

Accuracy (definition)	1
Activation energy (definition and properties)	1
Activator	3
Adirovitch model	3
Afterglow	8
Aluminium oxide (Al_2O_3)	8
Annealing (definition)	9
Annealing (general considerations)	9
Annealing procedures	11
Anomalous fading	19
Anomalous thermal fading	20
Area measurement methods (generality)	20
Area measurement method (Maxia et al.)	21
Area measurement method (May and Partridge: general order)	24
Area measurement method (Muntoni et al.: general order)	24
Area measurement method (Moharil: general order)	25
Area measurement method (Moharil: general order, $s=s(T)$)	26
Area measurement method (Rasheedy: general order)	31
Arrhenius equation	35
Assessment of random uncertainties in precision of TL measurements (general)	36
Atomic number (calculation)	39

CHAPTER B

Basic equation of radiation dosimetry by thermoluminescence	43
Batch of TLDs	45
Braunlich-Scharmann model	45

CHAPTER C

Calcium fluoride (CaF_2)	55
Calibration factor F_c (definition)	55
Calibration factor F_c (procedures)	56
Competition	58
Competitors	60
Computerized glow curve deconvolution (CGCD): Kitis' expressions	60

XII CONTENTS

Condition at the maximum (first order)	69
Condition at the maximum (first order): remarks	70
Condition at the maximum (general order)	71
Condition at the maximum (second order)	72
Condition at the maximum when $s'=s'(T)$ (second-order kinetics)	74
Condition at the maximum when $s''=s''(T)$ (general-order kinetics)	76
Condition at the maximum when $s=s(T)$ (first-order kinetics)	77
Considerations on the heating rate	78
Considerations on the methods for determining E	85
Considerations on the symmetry factor, μ , and the order of kinetics, b	91
Correction factor for beam quality, F_{en} (general)	95
Curve fitting method (Kirsh: general order)	97
CVD diamond	99

CHAPTER D

Defects	101
Delocalized bands	105
Determination of the dose by thermoluminescence	105
Dihalides phosphors	106
Dosimeter's background or zero dose reading (definition)	107
Dosimeter's background or zero dose reading (procedure)	107
Dosimetric peak	108
Dosimetric trap	108

CHAPTER E

Effect of temperature lag on trapping parameters	109
Energy dependence (procedure)	110
Environmental dose rate (calculation)	112
Environmental dose rate (correction factors)	116
Erasing treatment	117
Error sources in TLD measurements	117

CHAPTER F

Fading (theoretical aspects)	123
Fading factor	137
Fading: useful expressions	138
First-order kinetics when $s=s(T)$	147
Fluorescence	148

Fluorapatite ($\text{Ca}_5\text{F}(\text{PO}_4)_3$)	149
Frequency factor, s	149
Frequency factor, s (errors in its determination)	150
Frequency factor and pre-exponential factor expressions	151

CHAPTER G

Garlick-Gibson model (second-order kinetics)	157
General characteristics of first and second order glow-peaks	159
General-order kinetics when $s=s(T)$	163
Glow curve	163

CHAPTER I

In-vivo dosimetry (dose calibration factors)	165
Inflection points method (Land: first order)	166
Inflection points method (Singh et al.: general order)	168
Initial rise method when $s=s(T)$ (Aramu et al.)	171
Initialization procedure	172
Integral approximation	175
Integral approximation when $s=s(T)$	176
Interactive traps	176
Isothermal decay method (Garlick-Gibson: first order)	176
Isothermal decay method (general)	177
Isothermal decay method (May-Partridge: (a) general order)	178
Isothermal decay method (May-Partridge: (b) general order)	179
Isothermal decay method (Moharil: general order)	180
Isothermal decay method (Takeuchi et al.: general order)	182

CHAPTER K

Keating method (first order, $s=s(T)$)	185
Killer centers	188
Kinetic parameters determination: observations	188
Kinetics order: effects on the glow-curve shape	194

CHAPTER L

Linearization factor, F_{lin} (general requirements for linearity)	197
---	-----

XIV CONTENTS

Linearity (procedure)	200
Linearity test (procedure)	202
Lithium borate ($\text{Li}_2\text{B}_4\text{O}_7$)	204
Lithium fluoride family (LiF)	206
Localized energy levels	209
Lower detection limit (D_{ldl})	209
Luminescence (general)	209
Luminescence (thermal stimulation)	210
Luminescence centers	212
Luminescence dosimetric techniques	212
Luminescence dosimetry	213
Luminescence efficiency	213
Luminescence phenomena	214

CHAPTER M

Magnesium borate ($\text{MgO} \times n\text{B}_2\text{O}_3$)	215
Magnesium fluoride (MgF_2)	216
Magnesium orthosilicate (Mg_2SiO_4)	216
May-Partridge model (general order kinetics)	217
Mean and half-life of a trap	219
Metastable state	223
Method based on the temperature at the maximum (Randall-Wilkins)	223
Method based on the temperature at the maximum (Urbach)	224
Methods for checking the linearity	224
Model of non-ideal heat transfer in TL measurements	228
Multi-hit or multi-stage reaction models	231

CHAPTER N

Nonlinearity	233
Non-ideal heat transfer in TL measurements (generality)	240
Numerical curve fitting method (Mohan-Chen: first order)	241
Numerical curve fitting method (Mohan-Chen: second order)	243
Numerical curve fitting method (Shenker-Chen: general order)	244

CHAPTER O

Optical bleaching	247
Optical fading	247
Oven (quality control)	247

CHAPTER P-1

Partridge-May model (zero-order kinetics)	255
Peak shape method (Balarin: first- and second-order kinetics)	256
Peak shape method (Chen: first- and second-order)	260
Peak shape method (Chen: general-order kinetics)	272
Peak shape method (Christodoulides: first- and general-order)	276
Peak shape method (Gartia, Singh and Mazumdar: (b) general order)	279
Peak shape method (Grossweiner: first order)	280
Peak shape method (Halperin-Braner)	282
Peak shape method (Lushchik: first and second order)	292
Peak shape method (Mazumdar, Singh and Gartia: (a) general order)	295
Peak shape method (parameters)	299
Peak shape method when $s=s(T)$ (Chen: first- second- and general-order)	300
Peak shape method: reliability expressions	312

CHAPTER P-2

Peak shift	323
Perovskite's family (ABX_3)	325
Phosphorescence	326
Phosphors (definition)	329
Photon energy response (calculation)	329
Photon energy response (definition)	332
Phototransferred thermoluminescence (PTTL) (general)	333
Phototransferred thermoluminescence (PTTL): model	334
Post-irradiation annealing	340
Post-readout annealing	340
Precision and accuracy (general considerations)	340
Precision concerning a group of TLDs of the same type submitted to one irradiation	344
Precision concerning only one TLD undergoing repeated cycles of measurements (same dose)	345
Precision concerning several identical dosimeters submitted to different doses	346
Precision concerning several identical dosimeters undergoing repeated and equal irradiations (procedures)	349
Precision in TL measurements (definition)	357
Pre-irradiation annealing	357
Pre-readout annealing	357
Properties of the maximum conditions	357

XVI CONTENTS

CHAPTER Q

Quasiequilibrium condition	359
----------------------------	-----

CHAPTER R

Radiation-induced defects	361
Randall-Wilkins model (first-order kinetics)	361
Recombination center	364
Recombination processes	364
Reference and field dosimeters (definitions)	365
Relative intrinsic sensitivity factor or individual correction factor S_i (definition)	365
Relative intrinsic sensitivity factor or individual correction factor S_i (procedures)	368
Residual TL signal	374
Rubidium halide	375

CHAPTER S

Second-order kinetics when $s'=s'(T)$	377
Self-dose in competition to fading (procedure)	378
Sensitization (definition)	379
Sensitivity (definition)	379
Set up of a thermoluminescent dosimetric system (general requirements)	380
Simultaneous determination of dose and time elapsed since irradiation	381
Sodium pyrophosphate ($\text{Na}_4\text{P}_2\text{O}_7$)	390
Solid state dosimeters	391
Solid state dosimetry	391
Spurious thermoluminescence: chemiluminescence	391
Spurious thermoluminescence: surface-related phenomena	392
Spurious thermoluminescence: triboluminescence	392
Stability factor F_{st} (definition)	392
Stability factor F_{st} (procedure)	393
Stability of the reading system background	395
Stability of the reading system background (procedure)	396
Stability of TL response	396
Standard annealing	397
Stokes' law	397
Sulphate phosphors	397

CHAPTER T

Temperature gradient in a TL sample	401
Temperature lag: Kitis' expressions for correction (procedure)	403
Temperature lag: Kitis' expressions for correction (theory)	406
Test for batch homogeneity	411
Test for the reproducibility of a TL system (procedure)	415
Thermal cleaning (peak separation)	417
Thermal fading (procedure)	418
Thermal quenching	420
Thermally connected traps	421
Thermally disconnected traps	421
Thermoluminescence (thermodynamic definition)	422
Thermoluminescence (TL)	424
Thermoluminescent dosimetric system (definition)	424
Thermoluminescent materials: requirements	425
Tissue equivalent phosphors	426
Trap characteristics obtained by fading experiments	427
Trap creation model	429
Trapping state	430
Tunnelling	430
Two-trap model (Sweet and Urquhart)	431

CHAPTER V

Various heating rates method (Bohum, Porfianovitch, Booth: first order)	435
Various heating rates method (Chen-Winer: first order)	435
Various heating rates method (Chen-Winer: second and general orders)	437
Various heating rates method (Gartia et al.: general order)	439
Various heating rates method (Hoogenstraaten: first order)	440
Various heating rates method (Sweet-Urquhart: two-trap model)	440
Various heating rates method when $s=s(T)$ (Chen and Winer: first- and general-order)	441

CHAPTER Z

Zirconium oxide (ZrO_2)	445
-----------------------------	-----
