

CONTENTS

Chapter 1	Review of Calculus and Ordinary Differential Equations	1
1.1	Functions of One Real Variable	1
1.2	Derivatives	3
	Mean Value Theorem	4
	Cauchy Mean Value Theorem	4
	L'Hôpital's Rule	5
	Taylor's Theorem	5
	Maximum and Minimum	6
1.3	Integrals	7
	Integration by Parts	8
	Integration by Substitution	9
	Integration of Rational Functions	10
1.4	Functions of Several Variables	13
1.5	Derivatives	13
	Total Derivatives	16
1.6	Implicit Functions	19
1.7	Some Theorems	21
	Euler's Theorem	21
	Taylor's Theorem	22
1.8	Integral of a Function Depending on a Parameter	22
1.9	Ordinary Differential Equations (O.D.E.) – Definitions	25
1.10	First-Order Differential Equations	26
1.11	Separable First-Order Differential Equations	26
1.12	Homogeneous First-Order Differential Equations	27
1.13	Total or Exact First-Order Differential Equations	31
1.14	Linear First-Order Differential Equations	36
1.15	Bernoulli's Equation	39
1.16	Second-Order Linear Differential Equations with Constant Coefficients	41
1.17	Solutions by Laplace Transform	46
	Heaviside Step Function and Dirac Delta Function	49
1.18	Solutions Using Green's Functions	57
1.19	Modelling of Physical Systems	65
	Problems	74
Chapter 2	Series Solutions and Special Functions	89
2.1	Definitions	89

2.2	Power Series	92
2.3	Ordinary Points	95
2.4	Regular Singular Points and the Method of Frobenius	99
2.5	Method of Variation of Parameters	118
2.6	Sturm Liouville Problem	120
2.7	Special Functions	126
	Legendre's Functions	126
	Bessel Functions	134
	Modified Bessel's Equation	141
2.8	Fourier Series	144
	Fourier Integral	158
2.9	Asymptotic Solutions	162
	Parameter Expansion	170
	Problems	179
Chapter 3	Complex Variables	191
3.1	Introduction	191
3.2	Basic Properties of Complex Numbers	192
3.3	Complex Functions	198
3.4	Elementary Functions	213
3.5	Complex Integration	220
	Cauchy's Theorem	227
	Cauchy's Integral Formula	233
	Integral Formulae for Derivatives	233
	Morera's Theorem	237
	Maximum Modulus Principle	237
3.6	Series Representations of Analytic Functions	238
	Taylor Series	242
	Laurent Series	246
3.7	Residue Theory	253
	Cauchy's Residue Theorem	257
	Some Methods of Evaluating the Residues	258
	Trigonometric Integrals	263
	Improper Integrals of Rational Functions	265
	Evaluating Integrals Using Jordan's Lemma	269
3.8	Conformal Mapping	275
	Linear Transformation	279
	Reciprocal Transformation	282
	Bilinear Transformation	284
	Schwarz-Christoffel Transformation	287

	Joukowski Transformation	289
	Problems	293
Chapter 4	Vector and Tensor Analysis	301
4.1	Introduction	301
4.2	Vectors	301
4.3	Line, Surface and Volume Integrals	305
4.4	Relations Between Line, Surface and Volume Integrals	327
	Gauss' (Divergence) Theorem	327
	Stokes' Theorem	333
4.5	Applications	336
	Conservation of Mass	336
	Solution of Poisson's Equation	338
	Non-Existence of Periodic Solutions	340
	Maxwell's Equations	341
4.6	General Curvilinear Coordinate Systems and Higher Order Tensors	342
	Cartesian Vectors and Summation Convention	342
	General Curvilinear Coordinate Systems	347
	Tensors of Arbitrary Order	354
	Metric and Permutation Tensors	357
	Covariant, Contravariant and Physical Components	361
4.7	Covariant Differentiation	366
	Properties of Christoffel Symbols	368
4.8	Integral Transforms	379
4.9	Isotropic, Objective Tensors and Tensor-Valued Functions	382
	Problems	391
Chapter 5	Partial Differential Equations I	401
5.1	Introduction	401
5.2	First Order Equations	402
	Method of Characteristics	402
	Lagrange's Method	411
	Transformation Method	414
5.3	Second Order Linear Equations	420
	Classification	420
5.4	Method of Separation of Variables	427
	Wave Equation	427
	D'Alembert's Solution	431
	Diffusion Equation	435
	Laplace's Equation	437

5.5	Cylindrical and Spherical Polar Coordinate Systems	439
5.6	Boundary and Initial Conditions	447
5.7	Non-Homogeneous Problems	450
5.8	Laplace Transforms	460
5.9	Fourier Transforms	474
5.10	Hankel and Mellin Transforms	483
5.11	Summary	494
	Problems	496
Chapter 6	Partial Differential Equations II	511
6.1	Introduction	511
6.2	Method of Characteristics	511
6.3	Similarity Solutions	523
6.4	Green's Functions	532
	Dirichlet Problems	532
	Neumann Problems	540
	Mixed Problems (Robin's Problems)	545
	Conformal Mapping	547
6.5	Green's Functions for General Linear Operators	548
6.6	Quantum Mechanics	551
	Limitations of Newtonian Mechanics	551
	Schrödinger Equation	552
	Problems	562
Chapter 7	Numerical Methods	569
7.1	Introduction	569
7.2	Solutions of Equations in One Variable	570
	Bisection Method (Internal Halving Method)	571
	Secant Method	572
	Newton's Method	574
	Fixed Point Iteration Method	576
7.3	Polynomial Equations	580
	Newton's Method	580
7.4	Simultaneous Linear Equations	584
	Gaussian Elimination Method	585
	Iterative Method	595
7.5	Eigenvalue Problems	600
	Householder Algorithm	601
	The QR Algorithm	608
7.6	Interpolation	611

	Lagrange Interpolation	611
	Newton's Divided Difference Representation	614
	Spline Functions	619
	Least Squares Approximation	623
7.7	Numerical Differentiation and Integration	625
	Numerical Differentiation	625
	Numerical Integration	629
7.8	Numerical Solution of Ordinary Differential Equations, Initial Value Problems	637
	First Order Equations	638
	Euler's method	639
	Taylor's method	640
	Heun's method	643
	Runge-Kutta methods	643
	Adams-Bashforth method	646
	Higher Order or Systems of First Order Equations	648
7.9	Boundary Value Problems	659
	Shooting Method	659
	Finite Difference Method	665
7.10	Stability	671
	Problems	673
Chapter 8	Numerical Solution of Partial Differential Equations	681
8.1	Introduction	681
8.2	Finite Differences	681
8.3	Parabolic Equations	683
	Explicit Method	684
	Crank-Nicolson Implicit Method	686
	Derivative Boundary Conditions	690
8.4	Elliptic Equations	696
	Dirichlet Problem	697
	Neumann Problem	701
	Poisson's and Helmholtz's Equations	703
8.5	Hyperbolic Equations	706
	Difference Equations	706
	Method of Characteristics	710
8.6	Irregular Boundaries and Higher Dimensions	715
8.7	Non-Linear Equations	717
8.8	Finite Elements	722
	One-Dimensional Problems	722
	Variational method	723

	Galerkin method	724
	Two-Dimensional Problems	727
	Problems	734
Chapter 9	Calculus of Variations	739
9.1	Introduction	739
9.2	Function of One Variable	740
9.3	Function of Several Variables	742
9.4	Constrained Extrema and Lagrange Multipliers	745
9.5	Euler-Lagrange Equations	747
9.6	Special Cases	749
	Function f Does Not Depend on y' Explicitly	749
	Function f Does Not Depend on y Explicitly	751
	Function f Does Not Depend on x Explicitly	752
	Function f Is a Linear Function of y'	754
9.7	Extension to Higher Derivatives	756
9.8	Transversality (Moving Boundary) Conditions	757
9.9	Constraints	760
9.10	Several Dependent Variables	765
9.11	Several Independent Variables	772
9.12	Transversality Conditions Where the Functional Depends on Several Functions	786
9.13	Subsidiary Conditions Where the Functional Depends on Several Functions	790
	Problems	803
Chapter 10	Special Topics	809
10.1	Introduction	809
10.2	Phase Space	809
10.3	Hamilton's Equations of Motion	814
10.4	Poisson Brackets	817
10.5	Canonical Transformations	819
10.6	Liouville's Theorem	823
10.7	Discrete Probability Theory	826
10.8	Binomial, Poisson and Normal Distribution	830
10.9	Scope of Statistical Mechanics	840
10.10	Basic Assumptions	842
10.11	Statistical Thermodynamics	845
10.12	The Equipartition Theorem	851
10.13	Maxwell Velocity Distribution	852
10.14	Brownian Motion	853
	Problems	856

References	861
Appendices	867
Appendix I – The equation of continuity in several coordinate systems	867
Appendix II – The equation of motion in several coordinate systems	868
Appendix III – The equation of energy in terms of the transport properties in several coordinate systems	871
Appendix IV – The equation of continuity of species A in several coordinate systems	873
