<i>Preface</i>	xi
<b>1 Liquid Crystal States of Matter</b>	<b>1</b>
1.1 Liquid Crystal States	1
1.2 Appearance and Light Scattering of Liquid Crystals	4
1.3 Chemical Structure of Liquid Crystals	6
1.3.1 Basic molecular structure of rodic liquid crystals	6
1.3.2 Discotic liquid crystals	7
1.3.3 Amphiphilic liquid crystals	9
1.4 Polymorphism of Liquid Crystals	11
1.4.1 No translational order — Nematics	12
1.4.2 One-dimensional translational order — Smectic A and C phases	13
1.4.3 Two-dimensional translational order within layers with weak correlation along the third dimension — Hexatic phases	15
1.4.4 Three-dimensional translational order but correlation is weaker than that in crystals	17
1.4.5 Chiral liquid crystals	19
1.4.6 Cubic phases	21
1.4.7 Discotic liquid crystals	23
1.4.8 Lyotropic liquid crystals	25
1.4.9 Induced liquid crystals	26

1.5	Continuum Theory of Liquid Crystals	27
1.5.1	Order parameter	27
1.5.2	Distortions of liquid crystals	29
1.5.3	Frederiks transitions	31
1.5.4	The twisted – and supertwisted – nematic liquid crystals	34
1.6	Defects in Liquid Crystals	35
1.6.1	The Volterra process	36
1.6.2	Strength of disclination in nematics	38
1.6.3	Point disclinations	42
1.6.4	Defects in smectic A phase	44
1.6.5	Defects in the smectic C phase	47
1.6.6	Dispersion in the smectic C* phase	47
1.6.7	Defects in the cholesteric phase	47
1.6.8	Textures	49
1.6.9	Homotopy classification of defects in liquid crystals	50
<b>2</b>	<b>Theories of Liquid Crystalline Polymers</b>	<b>53</b>
2.1	Onsager Theory for Rigid – Rod Liquid Crystalline Polymers	54
2.1.1	The partition function	55
2.1.2	The excluded volume	61
2.1.3	The equilibrium of liquid crystals	62
2.2	Flory Theory for Rigid – Rod Liquid Crystalline Polymers	65
2.2.1	Partition function of a rigid rod solution	65
2.2.2	Formation of the liquid crystal phase	69
2.2.3	Two phase equilibrium	71
2.2.4	Effect of “soft” interaction between molecules	74
2.2.5	Semi-rigid chains	78
2.2.6	Discussion of the Flory theory	79
2.3	Comparison of the Onsager and Flory Theories	81
2.4	Maier-Saupe Mean Field Approach	86
2.4.1	Maier-Saupe mean field theory for small molecular mass liquid crystals	86
2.4.2	Freely-jointed-rod chains	88
2.4.3	Elastically-jointed-rod chains	90
2.4.4	Discrete and continuum chain models	95

2.5	Worm Chain Model of Liquid Crystalline Polymers	96
2.5.1	Path integral description for polymers	96
2.5.2	Anisotropic conformation	99
2.5.3	Order parameter	101
2.5.4	Dependence of N–I transition on polymer chain length	101
2.5.5	Latent entropy at transition	102
2.6	Main Chain Liquid Crystalline Polymers with Spacers	103
2.6.1	Molecularly non-homogeneous liquid crystalline polymers	103
2.6.2	Pseudo-second-order-phase-transition temperature	108
2.6.3	Hinge effect	108
2.7	Side Chain Liquid Crystalline Polymers	110
2.7.1	Model	110
2.7.2	Phase classification of side chain nematic polymers	111
2.7.3	Order parameter and phase transitions	112
2.7.4	Conformations	115
2.8	Liquid Crystalline Networks	116
2.8.1	Conventional networks	117
2.8.2	Model of liquid crystal networks	119
2.8.3	Relation of stress and strain	121
2.9	Liquid Crystal Network Gels	124
2.9.1	Nematogetic network swollen by isotropic solvent	124
2.9.2	Nematogetic network swollen by nematic solvent	126
2.9.3	The shift of phase equilibria under the presence of force	131
<b>3</b>	<b>Molecular Engineering of Liquid Crystalline Polymers</b>	<b>133</b>
3.1	Introduction	133
3.2	Low Mass Liquid Crystalline Compounds and Mesogenic Units	138
3.2.1	Poly(1,4-phenylene)s	139
3.2.2	Incorporation of “side-steps”	139

3.2.3	Incorporation of kinked elements	142
3.2.4	Incorporation of flexible spacers	143
3.2.5	Terminal or end-on substitution	143
3.2.6	Lateral or side-on substitution	145
3.3	Molecular Weight and Molecular Weight Distribution	147
3.4	Main Chain Liquid Crystalline Polymers	155
3.5	Liquid Crystalline Polymers of the Side-Group Type with End-on Attachment	166
3.5.1	Synthesis	166
3.5.2	Structure and properties	171
3.6	Liquid Crystalline Polymers of the Side-group Type with Side-on Attachment and “Mesogen-jacketed Liquid Crystal Polymers”	177
3.7	Liquid Crystalline Polymers without Mesogenic Units	188
<b>4</b>	<b>Characterization of Liquid Crystalline Polymers</b>	<b>195</b>
4.1	Polarizing Optical Microscopy (POM)	197
4.1.1	Optical basics for POM	198
4.1.2	Orthoscopic observation	201
4.1.3	Conoscopic observation	206
4.1.4	Textures of polymeric liquid crystals	209
4.2	Differential Thermal Analysis (DTA) and Differential Scanning Calorimetry (DSC)	221
4.3	X-Ray Diffraction	228
4.4	Other Methods	237
4.4.1	Miscibility testing	237
4.4.2	Infrared dichroism	238
4.4.3	NMR study	240
4.4.4	Small-angle neutron scattering	241
<b>5</b>	<b>Liquid Crystalline Polymers as High Performance Fiber and Structural Materials</b>	<b>245</b>
5.1	Introduction	245
5.2	Liquid Crystalline Aromatic Polyamides	246
5.3	Liquid Crystalline Aromatic Heterocyclic Polymers	254
5.4	Thermotropic Liquid Crystalline Polymers	259
5.4.1	Type-1 copolyesters	261
5.4.2	Type-2 copolyesters	264
5.4.3	Type-3 copolyesters	268
5.5	Composites Reinforced by Liquid Crystalline Polymers	271

<b>6 Physical Properties and Applications of Liquid Crystalline Polymers</b>	<b>285</b>
6.1 Elastic Properties of Liquid Crystalline Polymers	285
6.2 Viscosity and Rheology of Liquid Crystalline Polymers	300
6.3 Cholesteric Liquid Crystalline Polymers	315
6.3.1 Optical properties of cholesteric liquid crystals	315
6.3.2 Lyotropic cholesteric liquid crystalline polymers	318
6.3.3 Thermotropic cholesteric liquid crystalline polymers	326
6.4 Non-Linear Optical Liquid Crystalline Polymers	329
6.5 Ferroelectric Liquid Crystalline Polymers	341
6.6 Applications of Liquid Crystalline Polymers in Information Storage	350
6.6.1 Nematic liquid crystalline polymers	350
6.6.2 Smectic liquid crystalline polymers	352
6.6.3 Cholesteric liquid crystalline polymers	353
6.6.4 Photo-isomeric change	354
