<i>Preface</i>	vii
1. Numbers	1
1.1 Counting	2
1.1.1 The natural numbers	2
1.1.1.1 Construction of the natural numbers	3
1.1.1.2 Arithmetic	4
1.1.2 The integers	5
1.1.2.1 Properties of zero and the negative integers	7
1.1.3 The rational numbers	7
1.1.4 Order	8
1.1.4.1 Ordering \mathbb{N} , \mathbb{Z} and \mathbb{Q}	9
1.1.5 1,2,3, infinity	10
1.1.5.1 Comparison of infinite sets	11
1.1.6 The arithmetic of infinities	11
1.1.7 Beyond ∞	16
1.2 The Real Numbers	18
1.2.1 How to create the irrational numbers	20
1.2.1.1 Algebraic description of the real numbers	22
1.2.2 How many real numbers are there?	24
1.2.3 Algebraic and transcendental numbers	25
1.2.3.1 Transcendental examples	27
1.2.4 The continuum hypothesis and an even bigger infinity	28
1.3 Complex Numbers and their Higher Dimensional Partners	30
1.3.1 The discovery of i	30
1.3.2 The complex plane	32

1.3.2.1	Using complex numbers in geometry	33
1.3.3	de Moivre's theorem	35
1.3.4	Polynomials and the fundamental theorem of algebra	36
1.3.4.1	Finding solutions to polynomial equations	36
1.3.5	Any more numbers?	39
1.3.5.1	The quaternions	40
1.3.5.2	Cayley numbers	42
1.4	Prime Numbers	43
1.4.1	Computers, algorithms and mathematics	45
1.4.2	Properties of prime numbers	46
1.4.3	How many prime numbers are there?	47
1.4.3.1	Distribution of the prime numbers	48
1.4.4	Euclid's algorithm	48
1.4.4.1	The speed of the Euclid algorithm	50
1.4.4.2	Continued fractions	51
1.4.5	Bezout's lemma and the fundamental theorem of arithmetic	53
1.5	Modular Numbers	56
1.5.1	Arithmetic modulo a prime number	57
1.5.1.1	A formula for the prime numbers	58
1.5.1.2	Fermat's little theorem	59
1.5.2	RSA cryptography	60
1.5.2.1	Creating the RSA system	61
1.5.2.2	An RSA cryptosystem	63
2.	Analysis	65
2.1	Infinite Limits	66
2.1.1	Three examples	66
2.1.1.1	Achilles and the tortoise	66
2.1.1.2	Continuously compounded interest rates	68
2.1.1.3	Iterative solution of equations	71
2.1.2	The mathematical description of a limit	73
2.1.2.1	The general principle of convergence	77
2.1.3	Limits applied to infinite sums	77
2.1.3.1	An example: geometric progression	78
2.2	Convergence and Divergence of Infinite Sums	79
2.2.1	The harmonic series	80
2.2.2	Testing for convergence	81
2.2.2.1	The comparison test	81

2.2.2.2	The alternating series test	82
2.2.2.3	Absolutely convergent series converge	83
2.2.2.4	The ratio test	84
2.2.3	Power series and the radius of convergence	85
2.2.3.1	Determining the radius of convergence	87
2.2.4	Rearrangement of infinite series	87
2.3	Real Functions	89
2.3.1	Limits of real valued functions	90
2.3.2	Continuous functions	91
2.3.3	Differentiation	94
2.3.3.1	Examples	97
2.3.3.2	The mean value theorem	100
2.3.3.3	l'Hôpital's rule	102
2.3.4	Areas and Integration	103
2.3.5	The fundamental theorem of calculus	105
2.4	The Logarithm and Exponential Functions and e	107
2.4.1	The definition of $\log(x)$	108
2.4.2	The definition of $\exp(x)$	111
2.4.3	Euler's number e	113
2.4.3.1	The irrationality of e	116
2.5	Power Series	118
2.5.1	The Taylor series	120
2.5.1.1	Cautionary example	123
2.5.1.2	Complex extensions of real functions	124
2.6	π and Analytical Views of Trigonometry	125
2.6.1	Angles and the area of circle sectors	126
2.6.1.1	A series expression for π	128
2.6.2	Tangent, sines and cosines	130
2.6.2.1	Defining $\sin(x)$ and $\cos(x)$ through their power series	132
2.6.3	Fourier series	134
2.7	Complex Functions	137
2.7.1	Exponential and trigonometrical functions	137
2.7.2	Some basic properties of complex functions	139
2.7.3	The logarithm and multivalued functions	140
2.7.4	Powers of complex numbers	141
3.	Algebra	145
3.1	Linearity	147

3.1.1	Linear equations	147
3.1.1.1	Systems of multiple linear equations	148
3.1.2	Vector spaces	151
3.1.2.1	Planes, lines and other vector spaces	153
3.1.2.2	Subspaces and intersection of vector spaces	154
3.1.2.3	Physical examples of vectors	155
3.1.2.4	How many vector spaces are there?	156
3.1.2.5	Further examples of vectors	160
3.1.3	Putting vector spaces to work: linear maps and matrices	162
3.1.3.1	Simultaneous linear equations revisited	163
3.1.3.2	Properties of matrix algebra	163
3.1.4	Solving linear systems	164
3.1.4.1	Homogeneous equations	165
3.1.4.2	Linear differential operators	165
3.1.4.3	Inhomogeneous linear equations	166
3.1.4.4	Inverting square matrices	167
3.1.4.5	Determinants	168
3.1.4.6	Properties of determinants	169
3.1.4.7	Formula for the inverse of a square matrix	170
3.2	Optimisation	170
3.2.1	Linear constraints	171
3.2.2	The simplex algorithm	172
3.2.2.1	An example	175
3.2.2.2	The diet problem	178
3.2.2.3	The transportation problem	178
3.2.2.4	Games	179
3.3	Distance, Length and Angle	180
3.3.1	Scalar products	180
3.3.1.1	Standard geometry and the Euclidean scalar product	181
3.3.1.2	Polynomials and scalar products	183
3.3.2	General scalar products	185
3.3.2.1	The Cauchy-Schwarz inequality	186
3.3.2.2	General properties of lengths and distances	188
3.3.2.3	Lengths not arising from scalar products	189
3.4	Geometry and Algebra	190
3.4.1	Quadratic forms in two dimensions	191
3.4.2	Quadratic surfaces in three dimensions	193

3.4.3	Eigenvectors and eigenvalues	195
3.4.3.1	Finding eigenvectors and eigenvalues	195
3.4.3.2	The special properties of real symmetric matrices	196
3.4.3.3	Quadratic forms revisited	198
3.4.3.4	Examples revisited	199
3.4.4	Isometries	202
3.4.4.1	Translations	205
3.4.4.2	Determinants, volumes and isometries	205
3.5	Symmetry	207
3.5.1	Groups of symmetries	210
3.5.1.1	The group axioms	210
3.5.1.2	Quaternions again	211
3.5.1.3	Multiplication of integers modulo p	212
3.5.2	Subgroups—symmetry within symmetry	213
3.5.2.1	Special properties of finite groups	214
3.5.3	Group actions	217
3.5.4	Two- and three-dimensional wallpaper	220
3.5.4.1	Wallpaper on a lattice	221
3.5.4.2	Hanging the wallpaper	223
3.5.4.3	Application to crystallography	226
4.	Calculus and Differential Equations	229
4.1	The Why and How of Calculus	229
4.1.1	Acceleration, velocity and position	229
4.1.1.1	Integration	231
4.1.2	Back to Newton	233
4.1.2.1	A simple pendulum	233
4.1.2.2	Complicating the simple pendulum	235
4.1.2.3	Development of calculus from Newton's law	236
4.2	Ordinary Linear Differential Equations	237
4.2.1	Complete solution of ordinary linear differential equations	237
4.2.2	Inhomogeneous equations	239
4.2.3	Solving homogeneous linear equations	240
4.2.3.1	Equations with constant coefficients	240
4.2.4	Power series method of solution	241
4.2.4.1	Bessel functions	244
4.2.4.2	General method of solution by series	246

4.3	Partial Differential Equations	246
4.3.1	Definition of the partial derivative	247
4.3.2	The equations of motion for a vibrating string	248
4.3.2.1	The wave interpretation	250
4.3.2.2	Separable solutions	250
4.3.2.3	Initial and boundary condition	252
4.3.2.4	Musical stringed instruments	252
4.3.3	The diffusion equation	254
4.3.3.1	Solar heating	257
4.3.4	A real look at complex differentiation	258
4.3.4.1	Laplace equations	260
4.4	Calculus Meets Geometry	261
4.4.1	Tangent vectors and normals	262
4.4.2	Grad, Div and Curl	266
4.4.3	Integration over surfaces and volumes	267
4.4.3.1	Gaussian integrals	268
4.4.3.2	Geometric understanding of divergence	271
4.4.3.3	Geometric understanding of curl	273
4.4.3.4	Fourier revisited	274
4.4.3.5	Divergence theorem in action	274
4.4.4	Laplace and Poisson equations	276
4.4.4.1	Solving Laplace's equation	277
4.4.4.2	Poisson equations	277
4.4.4.3	Boundary conditions and uniqueness of solutions	278
4.5	Non-Linearity	280
4.5.1	The Navier-Stokes equation for fluid motion	280
4.5.2	Perturbation of differential equations	282
4.5.2.1	Ballistics	283
4.5.2.2	The simple pendulum is not so simple	287
4.6	Qualitative Methods: Solution Without Solution	290
4.6.1	What does it mean to solve a differential equation?	292
4.6.2	Phase space and orbits	293
4.6.3	Construction of the phase space portrait	295
4.6.3.1	First order non-linear differential equations	295
4.6.3.2	Second order non-linear differential equations	295
4.6.3.3	SHM in wolf's clothing	296
4.6.3.4	Non-linear example	298
4.6.4	General forms of flow near to a fixed point	301

4.6.5	Predator prey example	303
4.6.6	Competing herbivores	305
5.	Probability	309
5.1	The Basic Ideas of Probability	310
5.1.0.1	The matching birthday problem	311
5.1.1	Two cautionary examples	313
5.1.1.1	The problem of the terminated match	313
5.1.1.2	The problem of the doors and the goat	315
5.2	Precise Probability	316
5.2.1	Inclusion-exclusion	317
5.2.1.1	The coats problem	318
5.2.2	Conditional probability	320
5.2.2.1	The Bayesian statistician	321
5.2.3	The law of total probability and Bayes formula	322
5.2.3.1	Reliability of drug testing	324
5.3	Functions on Samples Spaces: Random Variables	325
5.3.1	The binomial distribution	326
5.3.2	The Poisson approximation to the binomial	329
5.3.2.1	Error distribution in noisy data	330
5.3.3	The Poisson distribution	332
5.3.3.1	Interpretation of the Poisson distribution	332
5.3.4	Continuous random variables	334
5.3.4.1	The normal distribution	335
5.3.4.2	The uniform distribution	337
5.3.4.3	The Gamma random variable	338
5.3.5	An application of probability to prime numbers	339
5.3.6	Averaging and expectation	341
5.3.6.1	What do we expect to obtain in a Poisson or binomial trial?	343
5.3.6.2	What do we expect to obtain in a normal trial?	344
5.3.6.3	The collection problem	345
5.3.6.4	The Cauchy distribution	346
5.3.7	Dispersion and variance	346
5.3.7.1	A dynamical interpretation of expectation and variance	348
5.4	Limit Theorems	348
5.4.1	Chebyshev's inequality	349

5.4.1.1	Chebyshev as the best possible inequality	350
5.4.1.2	Standardising deviations from the average	351
5.4.1.3	Standardised variables	352
5.4.2	The law of large numbers	352
5.4.2.1	Monte Carlo integration	353
5.4.3	The central limit theorem and the normal distribution	355
5.4.3.1	The central limit theorem	356
6.	Theoretical Physics	361
6.1	The Newtonian World	363
6.1.1	The motion of the planets around the sun	364
6.1.1.1	Transforming the equation of motion	364
6.1.1.2	Solution of the problem	366
6.1.1.3	Newtonian anti-gravity	369
6.1.2	Proving conservation of energy	370
6.1.3	Planetary catastrophe for other types of forces	372
6.1.4	Earth, sun and moon?	374
6.2	Light, Electricity and Magnetism	376
6.2.1	Static electricity	377
6.2.1.1	The equation for a magnet	378
6.2.2	Current electricity and magnetism	380
6.2.3	Maxwell's equations for electromagnetic waves	381
6.2.3.1	Electromagnetic wave solutions in the vacuum of space	382
6.3	Relativity and the Geometry of the Universe	384
6.3.1	Special relativity	386
6.3.1.1	Length contraction and time dilation	390
6.3.1.2	Lorentz transformation as a rotation in space-time	391
6.3.1.3	The Lorentz transformations as the group of symmetries of spacetime	393
6.3.1.4	Relativistic momentum	395
6.3.2	General relativity and gravitation	397
6.3.2.1	The Schwarzschild black hole	399
6.4	Quantum Mechanics	401
6.4.1	Quantisation	401
6.4.1.1	The wave-particle paradox	402
6.4.2	The formulation of quantum mechanics	404
6.4.2.1	The underlying equation	405

6.4.3	The basic quantum mechanical setup	408
6.4.3.1	Particle trapped in a one-dimensional box	410
6.4.3.2	Momentum eigenstates	412
6.4.3.3	Generalisation to three dimensions	413
6.4.4	Heisenberg's uncertainty principle	414
6.4.4.1	Uncertainty in action	416
6.4.5	Where next?	417
Appendix A Exercises for the Reader		419
A.1	Numbers	420
A.2	Analysis	429
A.3	Algebra	439
A.4	Calculus and Differential Equations	453
A.5	Probability	471
A.6	Theoretical Physics	486
Appendix B Further Reading		499
Appendix C Basic Mathematical Background		503
C.1	Sets	503
C.1.1	Notation	503
C.1.2	Operations on sets	504
C.2	Logic and proof	504
C.2.1	Forms of proof	505
C.3	Functions	506
C.3.1	Composition of functions	506
C.3.2	Factorials	506
C.3.3	Powers, indices and the binomial theorem	506
C.3.4	The exponential, e and the natural logarithm	507
C.3.5	The trigonometrical functions	508
C.3.6	The hyperbolic functions	508
C.4	Vectors and matrices	509
C.4.1	Combining vectors together	509
C.4.2	Polar coordinates	510
C.4.3	Matrices	510
C.5	Calculus	512
C.5.1	Differentiation	512
C.5.2	Integration	513

C.5.3	Position, velocity and acceleration	513
C.5.4	Simple harmonic motion	514
Appendix D	Dictionary of Symbols	515
D.1	The Greek letters	515
D.2	Mathematical symbols	516
<i>Index</i>		519
