## I. Mathematical Bases

1. Manifolds, Flows, Lie Groups and Lie Algebras	3
1.1 Dynamical Systems . . . . .	3
1.2 Manifolds and Diffeomorphisms . . . . .	4
1.3 Flows and Vector Fields . . . . .	8
1.3.1 A steady flow and its velocity field . . . . .	8
1.3.2 Tangent vector and differential operator . . . . .	10
1.3.3 Tangent space . . . . .	11
1.3.4 Time-dependent (unsteady) velocity field . . . . .	12
1.4 Dynamical Trajectory . . . . .	13
1.4.1 Fiber bundle (tangent bundle) . . . . .	13
1.4.2 Lagrangian and Hamiltonian . . . . .	14
1.4.3 Legendre transformation . . . . .	16
1.5 Differential and Inner Product . . . . .	18
1.5.1 Covector (1-form) . . . . .	18
1.5.2 Inner (scalar) product . . . . .	20
1.6 Mapping of Vectors and Covectors . . . . .	21
1.6.1 Push-forward transformation . . . . .	21
1.6.2 Pull-back transformation . . . . .	23
1.6.3 Coordinate transformation . . . . .	24

1.7	Lie Group and Invariant Vector Fields . . . . .	25
1.8	Lie Algebra and Lie Derivative . . . . .	27
1.8.1	Lie algebra, adjoint operator and Lie bracket . . . . .	27
1.8.2	An example of the rotation group $SO(3)$ . . . . .	29
1.8.3	Lie derivative and Lagrange derivative . . . . .	30
1.9	Diffeomorphisms of a Circle $S^1$ . . . . .	35
1.10	Transformation of Tensors and Invariance . . . . .	36
1.10.1	Transformations of vectors and metric tensors . . . . .	36
1.10.2	Covariant tensors . . . . .	38
1.10.3	Mixed tensors . . . . .	39
1.10.4	Contravariant tensors . . . . .	42
2.	Geometry of Surfaces in $\mathbb{R}^3$ . . . . .	45
2.1	First Fundamental Form . . . . .	45
2.2	Second Fundamental Form . . . . .	50
2.3	Gauss's Surface Equation and an Induced Connection . . . . .	52
2.4	Gauss–Mainardi–Codazzi Equation and Integrability . . . . .	54
2.5	Gaussian Curvature of a Surface . . . . .	56
2.5.1	Riemann tensors . . . . .	56
2.5.2	Gaussian curvature . . . . .	58
2.5.3	Geodesic curvature and normal curvature . . . . .	59
2.5.4	Principal curvatures . . . . .	60
2.6	Geodesic Equation . . . . .	63
2.7	Structure Equations in Differential Forms . . . . .	64
2.7.1	Smooth surfaces in $\mathbb{R}^3$ and integrability . . . . .	64
2.7.2	Structure equations . . . . .	66
2.7.3	Geodesic equation . . . . .	68
2.8	Gauss Spherical Map . . . . .	69
2.9	Gauss–Bonnet Theorem I . . . . .	70
2.10	Gauss–Bonnet Theorem II . . . . .	72
2.11	Uniqueness: First and Second Fundamental Tensors . . . . .	74
3.	Riemannian Geometry . . . . .	77
3.1	Tangent Space . . . . .	77
3.1.1	Tangent vectors and inner product . . . . .	77
3.1.2	Riemannian metric . . . . .	78
3.1.3	Examples of metric tensor . . . . .	79

3.2	Covariant Derivative (Connection)	80
3.2.1	Definition	80
3.2.2	Time-dependent case	81
3.3	Riemannian Connection	82
3.3.1	Definition	82
3.3.2	Christoffel symbol	83
3.4	Covariant Derivative along a Curve	83
3.4.1	Derivative along a parameterized curve	83
3.4.2	Parallel translation	84
3.4.3	Dynamical system of an invariant metric	84
3.5	Structure Equations	85
3.5.1	Structure equations and connection forms	85
3.5.2	Two-dimensional surface $M^2$	88
3.5.3	Example: Poincaré surface (I)	89
3.6	Geodesic Equation	91
3.6.1	Local coordinate representation	91
3.6.2	Group-theoretic representation	92
3.6.3	Example: Poincaré surface (II)	93
3.7	Covariant Derivative and Parallel Translation	96
3.7.1	Parallel translation again	96
3.7.2	Covariant derivative again	98
3.7.3	A formula of covariant derivative	98
3.8	Arc-Length	100
3.9	Curvature Tensor and Curvature Transformation	102
3.9.1	Curvature transformation	102
3.9.2	Curvature tensor	103
3.9.3	Sectional curvature	105
3.9.4	Ricci tensor and scalar curvature	107
3.10	Jacobi Equation	108
3.10.1	Derivation	108
3.10.2	Initial behavior of Jacobi field	111
3.10.3	Time-dependent problem	112
3.10.4	Two-dimensional problem	113
3.10.5	Isotropic space	114
3.11	Differentiation of Tensors	114
3.11.1	Lie derivatives of 1-form and metric tensor	114
3.11.2	Riemannian connection $\nabla$	115
3.11.3	Covariant derivative of tensors	116

3.12 Killing Fields . . . . .	117
3.12.1 Killing vector field $X$ . . . . .	117
3.12.2 Isometry . . . . .	118
3.12.3 Positive curvature and simplified Jacobi equation . . . . .	118
3.12.4 Conservation of $\langle X, T \rangle$ along $\gamma(s)$ . . . . .	119
3.12.5 Killing tensor field . . . . .	120
3.13 Induced Connection and Second Fundamental Form . . . . .	121

## II. Dynamical Systems

4. Free Rotation of a Rigid Body . . . . .	127
4.1 Physical Background . . . . .	127
4.1.1 Free rotation and Euler's top . . . . .	127
4.1.2 Integrals of motion . . . . .	130
4.1.3 Lie–Poisson bracket and Hamilton's equation . . . . .	131
4.2 Transformations (Rotations) by $SO(3)$ . . . . .	131
4.2.1 Transformation of reference frames . . . . .	132
4.2.2 Right-invariance and left-invariance . . . . .	133
4.3 Commutator and Riemannian Metric . . . . .	135
4.4 Geodesic Equation . . . . .	137
4.4.1 Left-invariant dynamics . . . . .	137
4.4.2 Right-invariant dynamics . . . . .	138
4.5 Bi-Invariant Riemannian Metrics . . . . .	139
4.5.1 $SO(3)$ is compact . . . . .	140
4.5.2 Ad-invariance and bi-invariant metrics . . . . .	140
4.5.3 Connection and curvature tensor . . . . .	142
4.6 Rotating Top as a Bi-Invariant System . . . . .	143
4.6.1 A spherical top (euclidean metric) . . . . .	143
4.6.2 An asymmetrical top (Riemannian metric) . . . . .	144
4.6.3 Symmetrical top and its stability . . . . .	146
4.6.4 Stability and instability of an asymmetrical top . . . . .	149
4.6.5 Supplementary notes to §4.6.3 . . . . .	150
5. Water Waves and KdV Equation . . . . .	153
5.1 Physical Background: Long Waves in Shallow Water . . . . .	154
5.2 Simple Diffeomorphic Flow . . . . .	158
5.2.1 Commutator and metric of $D(S^1)$ . . . . .	158

5.2.2	Geodesic equation on $D(S^1)$ . . . . .	160
5.2.3	Sectional curvatures on $D(S^1)$ . . . . .	160
5.3	Central Extension of $D(S^1)$ . . . . .	161
5.4	KdV Equation as a Geodesic Equation on $\hat{D}(S^1)$ . . . . .	161
5.5	Killing Field of KdV Equation . . . . .	163
5.5.1	Killing equation . . . . .	163
5.5.2	Isometry group . . . . .	163
5.5.3	Integral invariant . . . . .	164
5.5.4	Sectional curvature . . . . .	165
5.5.5	Conjugate point . . . . .	166
5.6	Sectional Curvatures of KdV System . . . . .	168
6.	Hamiltonian Systems: Chaos, Integrability and Phase Transition	171
6.1	A Dynamical System with Self-Interaction . . . . .	171
6.1.1	Hamiltonian and metric tensor . . . . .	171
6.1.2	Geodesic equation . . . . .	173
6.1.3	Jacobi equation . . . . .	173
6.1.4	Metric and covariant derivative . . . . .	174
6.2	Two Degrees of Freedom . . . . .	175
6.2.1	Potentials . . . . .	175
6.2.2	Sectional curvature . . . . .	176
6.3	Hénon–Heiles Model and Chaos . . . . .	177
6.3.1	Conventional method . . . . .	177
6.3.2	Evidence of chaos in a geometrical aspect . . . . .	177
6.4	Geometry and Chaos . . . . .	178
6.5	Invariants in a Generalized Model . . . . .	181
6.5.1	Killing vector field . . . . .	181
6.5.2	Another integrable case . . . . .	183
6.6	Topological Signature of Phase Transitions . . . . .	183
6.6.1	Morse function and Euler index . . . . .	184
6.6.2	Signatures of phase transition . . . . .	185
6.6.3	Topological change in the mean-field XY model . . . . .	186

### III. Flows of Ideal Fluids

7.	Gauge Principle and Variational Formulation	191
7.1	Introduction: Fluid Flows and Field Theory . . . . .	191
7.2	Lagrangians and Variational Principle . . . . .	193

7.2.1	Galilei-invariant Lagrangian . . . . .	193
7.2.2	Hamilton's variational formulations . . . . .	196
7.2.3	Lagrange's equation . . . . .	197
7.3	Conceptual Scenario of the Gauge Principle . . . . .	198
7.4	Global Gauge Transformation . . . . .	202
7.5	Local Gauge Transformation . . . . .	202
7.5.1	Covariant derivative . . . . .	203
7.5.2	Lagrangian . . . . .	204
7.6	Symmetries of Flow Fields . . . . .	205
7.6.1	Translational transformation . . . . .	206
7.6.2	Rotational transformation . . . . .	206
7.6.3	Relative displacement . . . . .	207
7.7	Laws of Translational Transformation . . . . .	208
7.7.1	Local Galilei transformation . . . . .	208
7.7.2	Determination of gauge field $\mathcal{A}$ . . . . .	209
7.7.3	Irrotational fields $\xi(x)$ and $u(x)$ . . . . .	210
7.8	Fluid Flows as Material Motion . . . . .	212
7.8.1	Lagrangian particle representation . . . . .	212
7.8.2	Lagrange derivative and Lie derivative . . . . .	215
7.8.3	Kinemematical constraint . . . . .	216
7.9	Gauge-Field Lagrangian $L_A$ (Translational Symmetry) . . . . .	216
7.9.1	A possible form . . . . .	216
7.9.2	Lagrangian of background thermodynamic state . . . . .	217
7.10	Hamilton's Principle for Potential Flows . . . . .	218
7.10.1	Lagrangian . . . . .	218
7.10.2	Material variations: irrotational and isentropic . . . . .	219
7.10.3	Constraints for variations . . . . .	220
7.10.4	Action principle for $L_P$ . . . . .	221
7.11	Rotational Transformations . . . . .	224
7.11.1	Orthogonal transformation of velocity . . . . .	224
7.11.2	Infinitesimal transformations . . . . .	225
7.12	Gauge Transformation (Rotation) . . . . .	226
7.12.1	Local gauge transformation . . . . .	226
7.12.2	Covariant derivative $\nabla_t$ . . . . .	227
7.12.3	Gauge principle . . . . .	228
7.12.4	Transformation law of the gauge field $\Omega$ . . . . .	228
7.13	Gauge-Field Lagrangian $L_B$ (Rotational Symmetry) . . . . .	229

7.14	Biot–Savart’s Law . . . . .	231
7.14.1	Vector potential of mass flux . . . . .	231
7.14.2	Vorticity as a gauge field . . . . .	233
7.15	Hamilton’s Principle for an Ideal Fluid (Rotational Flows) . . . . .	233
7.15.1	Constitutive conditions . . . . .	234
7.15.2	Lagrangian and its variations . . . . .	234
7.15.3	Material variation: rotational and isentropic . . . . .	235
7.15.4	Euler’s equation of motion . . . . .	237
7.15.5	Conservations of momentum and energy . . . . .	238
7.15.6	Noether’s theorem for rotations . . . . .	240
7.16	Local Symmetries in $a$ -Space . . . . .	242
7.16.1	Equation of motion in $a$ -space . . . . .	242
7.16.2	Vorticity equation and local rotation symmetry . . . . .	244
7.16.3	Vorticity equation in the $x$ -space . . . . .	246
7.16.4	Kelvin’s circulation theorem . . . . .	248
7.16.5	Lagrangian of the gauge field . . . . .	249
7.17	Conclusions . . . . .	250
8.	Volume-Preserving Flows of an Ideal Fluid . . . . .	253
8.1	Fundamental Concepts . . . . .	254
8.1.1	Volume-preserving diffeomorphisms . . . . .	254
8.1.2	Right-invariant fields . . . . .	257
8.2	Basic Tools . . . . .	260
8.2.1	Commutator . . . . .	260
8.2.2	Divergence-free connection . . . . .	261
8.2.3	Coadjoint action $ad^*$ . . . . .	262
8.2.4	Formulas in $\mathbb{R}^3$ space . . . . .	263
8.3	Geodesic Equation . . . . .	264
8.4	Jacobi Equation and Frozen Field . . . . .	266
8.5	Interpretation of Riemannian Curvature of Fluid Flows . . . . .	268
8.5.1	Flat connection . . . . .	268
8.5.2	Pressure gradient as an agent yielding curvature . . . . .	269
8.5.3	Instability in Lagrangian particle sense . . . . .	271
8.5.4	Time evolution of Jacobi field . . . . .	273
8.5.5	Stretching of line-elements . . . . .	273
8.6	Flows on a Cubic Space (Fourier Representation) . . . . .	275
8.7	Lagrangian Instability of Parallel Shear Flows . . . . .	277
8.7.1	Negative sectional curvatures . . . . .	277

8.7.2	Stability of a plane Couette flow . . . . .	279
8.7.3	Other parallel shear flows . . . . .	284
8.8	Steady Flows and Beltrami Flows . . . . .	285
8.8.1	Steady flows . . . . .	285
8.8.2	A Beltrami flow . . . . .	287
8.8.3	ABC flow . . . . .	289
8.9	Theorem: $\alpha_B^1 = -i_u d\alpha_w^1 + df$ . . . . .	290
9.	Motion of Vortex Filaments . . . . .	293
9.1	A Vortex Filament . . . . .	294
9.2	Filament Equation . . . . .	297
9.3	Basic Properties . . . . .	301
9.3.1	Left-invariance and right-invariance . . . . .	301
9.3.2	Landau–Lifshitz equation . . . . .	302
9.3.3	Lie–Poisson bracket and Hamilton’s equation . . . . .	302
9.3.4	Metric and loop algebra . . . . .	304
9.4	Geometrical Formulation and Geodesic Equation . . . . .	304
9.5	Vortex Filaments as a Bi-Invariant System . . . . .	306
9.5.1	Circular vortex filaments . . . . .	306
9.5.2	General vortex filaments . . . . .	308
9.5.3	Integral invariants . . . . .	308
9.6	Killing Fields on Vortex Filaments . . . . .	310
9.6.1	A rectilinear vortex . . . . .	310
9.6.2	A circular vortex . . . . .	311
9.6.3	A helical vortex . . . . .	313
9.7	Sectional Curvature and Geodesic Stability . . . . .	314
9.7.1	Killing fields . . . . .	314
9.7.2	General tangent field $X$ . . . . .	315
9.8	Central Extension of the Algebra of Filament Motion . . . . .	315

## IV. Geometry of Integrable Systems

10.	Geometric Interpretations of Sine–Gordon Equation . . . . .	321
10.1	Pseudosphere: A Geometric Derivation of SG . . . . .	321
10.2	Bianchi–Lie Transformation . . . . .	324
10.3	Bäcklund Transformation of SG Equation . . . . .	326

11. Integrable Surfaces: Riemannian Geometry and Group Theory	329
11.1 Basic Ideas	329
11.2 Pseudospherical Surfaces: SG, KdV, mKdV, ShG	330
11.3 Spherical Surfaces: NLS, SG, NSM	333
11.3.1 Nonlinear Schrödinger equation	333
11.3.2 Sine–Gordon equation revisited	335
11.3.3 Nonlinear sigma model and SG equation	336
11.3.4 Spherical and pseudospherical surfaces	338
11.4 Bäcklund Transformations Revisited	340
11.4.1 A Bäcklund transformation	340
11.4.2 Self-Bäcklund transformation	342
11.5 Immersion of Integrable Surfaces on Lie Groups	343
11.5.1 A surface $\Sigma^2$ in $\mathbb{R}^3$	343
11.5.2 Surfaces on Lie groups and Lie algebras	344
11.5.3 Nonlinear Schrödinger surfaces	346
11.6 Mapping of Integrable Systems to Spherical Surfaces	348
Appendix A Topological Space and Mappings	351
A.1 Topology	351
A.2 Mappings	351
Appendix B Exterior Forms, Products and Differentials	353
B.1 Exterior Forms	353
B.2 Exterior Products (Multiplications)	355
B.3 Exterior Differentiations	357
B.4 Interior Products and Cartan’s Formula	358
B.5 Vector Analysis in $\mathbb{R}^3$	358
B.6 Volume Form and Its Lie Derivative	361
B.7 Integration of Forms	362
B.7.1 Stokes’s theorem	362
B.7.2 Integral and pull-back	363
Appendix C Lie Groups and Rotation Groups	365
C.1 Various Lie Groups	365
C.2 One-Parameter Subgroup and Lie Algebra	366
C.3 Rotation Group $SO(n)$	367
C.4 $so(3)$	368

Appendix D	A Curve and a Surface in $\mathbb{R}^3$	371
	D.1 Frenet–Serret Formulas for a Space Curve . . . . .	371
	D.2 A Plane Curve in $\mathbb{R}^2$ and Gauss Map . . . . .	372
	D.3 A Surface Defined by $z = f(x, y)$ in $\mathbb{R}^3$ . . . . .	373
Appendix E	Curvature Transformation	375
Appendix F	Function Spaces $L_p, H^s$ and Orthogonal Decomposition	379
Appendix G	Derivation of KdV Equation for a Shallow Water Wave	381
	G.1 Basic Equations and Boundary Conditions . . . . .	381
	G.2 Long Waves in Shallow Water . . . . .	382
Appendix H	Two-Cocycle, Central Extension and Bott Cocycle	385
	H.1 Two-Cocycle and Central Extension . . . . .	385
	H.2 Bott Cocycle . . . . .	387
	H.3 Gelfand–Fuchs Cocycle: An Extended Algebra . . . . .	388
Appendix I	Additional Comment on the Gauge Theory of §7.3	391
Appendix J	Frobenius Integration Theorem and Pfaffian System	393
Appendix K	Orthogonal Coordinate Net and Lines of Curvature	395
	<i>References</i>	399
	<i>Index</i>	407
