<i>Preface</i>	xv
<i>Acknowledgments</i>	xxi
<i>List of Symbols</i>	xxiii
1. Introduction	1
1.1 Major Considerations	1
1.2 Vehicle Models	5
1.3 Bridge Models	9
1.4 Railway Bridges and Vehicles	12
1.5 Methods of Solution	15
1.6 Impact Factor and Speed Parameter	19
1.7 Concluding Remarks	22
Part I Moving Load Problems	25
2. Impact Response of Simply-Supported Beams	27
2.1 Introduction	27
2.2 Simple Beam Subjected to a Single Moving Load .	30
2.3 Impact Factor for Midpoint Displacement	36
2.4 Impact Factor for Midpoint Bending Moment . . .	40
2.5 Impact Factor for End Shear Force	43
2.6 Simple Beam Subjected to a Series of Moving Loads	45

2.6.1	Modeling of Wheel Loads of a Train	45
2.6.2	Method of Solution	48
2.6.3	Phenomenon of Resonance	54
2.6.4	Phenomenon of Cancellation	56
2.6.5	Optimal Design Criteria	57
2.7	Illustrative Examples	58
2.7.1	Comparison with Finite Element Solutions	59
2.7.2	Effects of Moving Masses and Damping . .	62
2.7.3	Effect of Span to Car Length Ratio	63
2.8	Concluding Remarks	67
3.	Impact Response of Railway Bridges with Elastic Bearings	69
3.1	Introduction	69
3.2	Equation of Motion	71
3.3	Fundamental Frequency of the Beam	73
3.4	Dynamic Response Analysis	75
3.5	Phenomena of Resonance and Cancellation	77
3.6	Effect of Structural Damping	82
3.7	Envelope Formula for Resonance Response	87
3.8	Impact Factor and Envelope Impact Formulas . . .	90
3.9	Numerical Examples	91
3.9.1	Phenomenon of Resonance	91
3.9.2	Effect of Structural Damping	93
3.9.3	Envelope Impact Formula	96
3.10	Concluding Remarks	100
4.	Mechanism of Resonance and Cancellation for Elastically-Supported Beams	101
4.1	Introduction	101
4.2	Formulation of the Theory	103
4.2.1	Assumed Modal Shape of Vibration	103
4.2.2	Single Moving Load	105
4.2.3	A Series of Moving Loads	106
4.3	Conditions of Resonance and Cancellation	108
4.4	Mechanism of Resonance and Cancellation	112

4.5	Field Measurement of Vibration of Railway Bridges	118
4.6	Concluding Remarks	123
5.	Curved Beams Subjected to Vertical and Horizontal Moving Loads	125
5.1	Introduction	125
5.2	Governing Differential Equations	127
5.3	Curved Beam Subjected to a Single Moving Load	129
5.3.1	Vertical Moving Load	129
5.3.2	Horizontal Moving Load	135
5.4	Unified Expressions for Vertical and Radial Vibrations	138
5.5	Solutions for Multi Moving Loads	140
5.6	Conditions of Resonance and Cancellation	143
5.7	Numerical Examples	144
5.7.1	Comparison of Analytic with Finite Element Solutions	144
5.7.2	Phenomenon of Cancellation Under Single or Multi Moving Masses	146
5.7.3	Phenomenon of Resonance Under Multi Moving Masses	149
5.7.4	I - S Plot — Impact Effect Caused by Moving Loads	150
5.8	Concluding Remarks	152
Part II Interaction Dynamics Problems		153
6.	Vehicle–Bridge Interaction Element Based on Dynamic Condensation	155
6.1	Introduction	155
6.2	Equations of Motion for the Vehicle and Bridge	157
6.3	Element Equations in Incremental Form	161
6.4	Equivalent Stiffness Equation for Vehicles	163
6.5	Vehicle–Bridge Interaction Element	165

6.6	Incremental Dynamic Analysis with Iterations . . .	169
6.6.1	Equivalent Stiffness Equations for VBI System	169
6.6.2	Procedure of Iterations	171
6.7	Numerical Verification	175
6.7.1	Simple Beam Subjected to Moving Sprung Mass	176
6.7.2	Simple Beam Subjected to Moving Train	179
6.7.3	Free-Fixed Beam with Various Models for Moving Vehicles	180
6.8	Parametric Studies	182
6.8.1	Models for Bridge, Train and Rail Irregularities	183
6.8.2	Moving Load versus Sprung Mass Model	184
6.8.3	Effect of Rail Irregularities	186
6.8.4	Effect of Ballast Stiffness	188
6.8.5	Effect of Vehicle Suspension Stiffness . . .	191
6.8.6	Effect of Vehicle Suspension Damping . . .	194
6.9	Concluding Remarks	196
7.	Vehicle–Bridge Interaction Element Considering Pitching Effect	199
7.1	Introduction	199
7.2	Equations of Motion for the Vehicle and Bridge . .	202
7.3	Rigid Vehicle–Bridge Interaction Element	207
7.4	Equations of Motion for the VBI System	213
7.5	Numerical Studies	217
7.5.1	Simple Beam Traveled by a Two-Axle System	217
7.5.2	Simple Beam Traveled by a Train Consisting of Five Identical Cars	219
7.5.3	Riding Comfort in the Presence of Track Irregularities	223

7.5.4	Effect of Elasticity of the Suspension System	223
7.5.5	Effect of Damping of the Suspension System	226
7.5.6	Effect of Track Irregularity	229
7.6	Concluding Remarks	229
8.	Modeling of Vehicle–Bridge Interactions by the Concept of Contact Forces	233
8.1	Introduction	233
8.2	Vehicle Equations and Contact Forces	236
8.3	Solution of Contact Forces from Vehicle Equations	240
8.4	VBI Element Considering Vertical Contact Forces Only	242
8.5	VBI Element Considering General Contact Forces	244
8.6	System Equations and Structural Damping	245
8.7	Procedure of Time-History Analysis for VBI Systems	247
8.8	Numerical Examples and Verification	249
8.8.1	Cantilever Beam Subjected to a Moving Load	249
8.8.2	Cantilever Beam Subjected to a Moving Mass	252
8.8.3	Simple Beam Subjected to a Moving Sprung Mass	254
8.8.4	Simple Beam Subjected to a Moving Rigid Bar Supported by Spring-Dashpot Units	257
8.8.5	Bridge Subjected to a Vehicle in Deceleration	262
8.8.6	Bridges Subjected to a Train Consisting of 10 Identical Cars	266
8.9	Concluding Remarks	268

9.	Vehicle–Rails–Bridge Interaction —	
	Two-Dimensional Modeling	271
9.1	Introduction	271
9.2	Train and Bridge Models and Minimal Bridge Segment	273
9.3	Vehicle’s Equations of Motion and Contact Forces	277
9.4	Rails and Bridge Element Equations	279
	9.4.1 Central Finite Rail (CFR) Element and Bridge Element	279
	9.4.2 Left Semi-Infinite Rail (LSR) Element	283
	9.4.3 Right Semi-Infinite Rail (RSR) Element	285
9.5	VRI Element Considering Vertical Contact Forces Only	286
9.6	VRI Element Considering General Contact Forces	287
9.7	System Equations and Structural Damping	289
9.8	Shift of Bridge Segment and Renumbering of Nodal Degrees of Freedom	292
9.9	Verification of Proposed Procedure	293
9.10	Numerical Studies	295
	9.10.1 Steady-State Responses of the Train, Rails and Bridge	296
	9.10.2 Impact Response of Rails and Bridge Under Various Train Speeds	299
	9.10.3 Response of Train to Track Irregularity and Riding Comfort of Train	303
	9.10.4 Effect of the Track System	307
9.11	Concluding Remarks	308
10.	Vehicle–Rails–Bridge Interaction —	
	Three-Dimensional Modeling	311
10.1	Introduction	311
10.2	Three-Dimensional Models for Train, Track and Bridge	313

10.3	Vehicle Equations and Contact Forces	314
10.4	Equations for the Rail and Bridge Elements	326
10.4.1	Central Finite Rail (CFR) Element for Track <i>A</i>	327
10.4.2	Central Finite Rail (CFR) Element for Track <i>B</i>	332
10.4.3	The Bridge Element	334
10.4.4	Left Semi-Infinite Rail (LSR) Element for Track <i>A</i>	337
10.4.5	Right Semi-Infinite Rail (RSR) Element for Track <i>A</i>	340
10.4.6	Left Semi-Infinite Rail (LSR) Element for Track <i>B</i>	342
10.4.7	Right Semi-Infinite Rail (RSR) Element for Track <i>B</i>	343
10.5	VRI Element Considering Vertical and Lateral Contact Forces	343
10.6	VRI Element Considering General Contact Forces	347
10.7	System Equations and Structural Damping	349
10.8	Simulation of Track Irregularities	354
10.9	Verification of the Proposed Theory and Procedure	361
10.10	Dynamic Characteristics of Train–Rails–Bridge Systems	366
10.10.1	Properties of the Railway Vehicles and Bridge	366
10.10.2	Natural Frequencies of the Railway Vehicles and Bridge	367
10.10.3	Dynamic Interactions Between the Train and Bridge	367
10.10.4	Train–Rails–Bridge Interaction Considering Track Irregularities	372
10.11	Dynamic Effects Induced by Trains at Different Speeds	384
10.12	Response Induced by Two Trains in Crossing	390

10.13	Criteria for Derailment and Safety Assessment of Trains	399
10.14	Concluding Remarks	406
11.	Stability of Trains Moving over Bridges Shaken by Earthquakes	409
11.1	Introduction	409
11.2	Analysis Model for Train–Rails–Bridge System	411
11.3	Railway–Bridge System with Ground Motions	414
11.3.1	Central Finite Rail (CFR) Element for Track <i>A</i>	414
11.3.2	Central Finite Rail (CFR) Element for Track <i>B</i>	418
11.3.3	Bridge Element	419
11.3.4	Left Semi-Infinite Rail (LSR) Element for Tracks <i>A</i> and <i>B</i>	420
11.3.5	Right Semi-Infinite Rail (RSR) Element for Tracks <i>A</i> and <i>B</i>	423
11.4	Method of Analysis	424
11.5	Description of Input Earthquake Records	426
11.6	Train Resting on Railway Bridge under Earthquake	435
11.6.1	Responses of Bridge and Train Car	436
11.6.2	Contact Forces between Wheels and Rails	443
11.6.3	Maximum YQ Ratio for Wheelsets in Earthquake	446
11.6.4	Stability of an Idle Train under Earthquakes of Various Intensities	448
11.7	Trains Moving over Railway Bridges under Earthquakes	450
11.7.1	Responses of Bridge and Train Car	450
11.7.2	Maximum YQ Ratio for Moving Trains in Earthquake	460
11.7.3	Stability Assessment of Moving Trains in Earthquake	460
11.8	Concluding Remarks	470

Appendix A	Derivation of Response Function \bar{P}_1 in Eq. (2.55)	473
Appendix B	Newmark's β Method	477
Appendix C	Vertical Frequency of Vibration of Curved Beam	481
Appendix D	Horizontal Frequency of Vibration of Curved Beam	483
Appendix E	Derivation of Residual Vibration for Curved Beam in Eq. (5.53)	485
Appendix F	Beam Element and Structural Damping Matrix	489
	F.1 Equation of Motion for Beam Element . . .	489
	F.2 Structural Damping Matrix	493
Appendix G	Partitioned Matrices and Vector for Vehicle, Eq. (9.4)	497
Appendix H	Related Matrices and Vectors for CFR Element	501
Appendix I	Related Matrices and Vectors for 3D Vehicle Model	503
Appendix J	Mass and Stiffness Matrices for Rail and Bridge Elements	507
	J.1 Mass and Stiffness Matrices of the CFR Element for Both Tracks	507
	J.2 Mass and Stiffness Matrices of the Bridge Element	508

J.3	Mass and Stiffness Matrices for the LSR Element	509
J.4	Mass and Stiffness Matrices of the RSR Element	510
J.5	Related Matrices and Vectors for the Rail Elements	510
