<i>Preface to the First Edition</i> . . . . .	ix
<i>Acknowledgments</i> . . . . .	xiii

## Part 1

<b>1 Introduction</b> . . . . .	3
1.1 Review of Basic Formulation for an Incompressible Fluid of Constant Density . . . . .	4
1.1.1 Governing Equations . . . . .	4
1.1.2 Boundary Conditions for an Inviscid Irrotational Flow . . . . .	6
1.2 Linearized Approximation for Small-Amplitude Waves . .	8
1.3 Elementary Notions of a Propagating Wave . . . . .	11
1.4 Progressive Water Waves on Constant Depth . . . . .	13
1.5 Group Velocity . . . . .	17
1.5.1 A Kinematic View . . . . .	17
1.5.2 A Dynamic View: Energy Flux . . . . .	18
<b>2 Propagation of Transient Waves in Open Water   of Essentially Constant Depth</b> . . . . .	23
2.1 Two-Dimensional Transient Problems . . . . .	23
2.1.1 Transient Disturbance Due to an Initial Displacement on the Free Surface . . . . .	26
2.1.2 Energy Propagation, Group Velocity . . . . .	32
2.1.3 Leading Waves Due to a Transient Disturbance .	33

2.1.4	Tsunami Due to Tilting of the Bottom . . . . .	35
2.2	Three-Dimensional Transient Response to Bottom Disturbances . . . . .	40
2.2.1	Two-Dimensional Tsunami Due to Impulsive Bottom Displacement . . . . .	44
2.2.2	Leading Waves of a Two-Dimensional Tsunami . . . . .	49
2.3	The Propagation of a Dispersive Wave Packet . . . . .	52
2.4	Slowly Varying Wavetrain by Multiple-Scales Analysis . . . . .	56
2.4.1	Evolution Equation for the Wave Envelope . . . . .	56
2.4.2	Evolution of the Front of a Wavetrain . . . . .	60
<b>3</b>	<b>Refraction by Slowly Varying Depth or Current . . . . .</b>	<b>65</b>
3.1	Geometrical Optics Approximation for Progressive Waves Over a Gradually Varying Bottom . . . . .	66
3.2	Ray Theory for Sinusoidal Waves, Fermat's Principle . . . . .	70
3.3	Straight and Parallel Depth Contours . . . . .	73
3.3.1	Geometry of Rays . . . . .	73
3.3.2	Amplitude Variation . . . . .	78
3.3.3	The Neighborhood of a Straight Caustic . . . . .	79
3.4	Circular Depth Contours . . . . .	82
3.4.1	Geometry of Rays . . . . .	82
3.4.2	Amplitude Variation . . . . .	90
3.5	An Approximate Equation Combining Diffraction and Refraction on a Slowly Varying Bottom — The Mild-Slope Equation . . . . .	96
3.6	Geometrical Optics Approximation for Refraction by Slowly Varying Current and Depth . . . . .	101
3.7	Physical Effects of Simple Steady Currents on Waves . . . . .	110
3.7.1	Uniform Current on Constant Depth . . . . .	110
3.7.2	Oblique Incidence on a Shear Current Over Constant Depth . . . . .	112
3.7.3	Colinear Waves and Current . . . . .	118
<b>4</b>	<b>Long Waves of Infinitesimal Amplitude Over Bot- tom with Appreciable Variations . . . . .</b>	<b>123</b>
4.1	Formulation of Linearized Long-Wave Theory . . . . .	123
4.1.1	Governing Equations . . . . .	123
4.1.2	Quasi-One-Dimensional Waves in a Long Channel of Slowly Varying Cross Section . . . . .	126

4.1.3	Further Remarks on the Radiation Condition . . .	127
4.2	Straight Depth Discontinuity — Normal Incidence . . . . .	130
4.2.1	The Solution . . . . .	130
4.2.2	Justification of the Matching Conditions at the Junction . . . . .	135
4.2.3	The Near Field for a Rectangular Step . . . . .	139
4.3	Straight Depth Discontinuity — Oblique Incidence . . . . .	143
4.4	Scattering by a Shelf or Trough of Finite Width . . . . .	146
4.5	Transmission and Reflection by a Slowly Varying Depth .	151
4.6	Trapped Waves on a Stepped Ridge . . . . .	157
4.7	Some General Features of One-Dimensional Problems — Trapped Modes and the Scattering Matrix .	163
4.7.1	A Qualitative Discussion of Trapped Waves . . . . .	163
4.7.2	The Scattering Matrix $[S(\alpha)]$ . . . . .	165
4.7.3	Trapped Modes as Imaginary Poles of $[S(\alpha)]$ . . . . .	167
4.7.4	Properties of $[S(\alpha)]$ for Real $\alpha$ . . . . .	169
4.8	Edge Waves on a Constant Slope . . . . .	172
4.9	Circular Bottom Contours . . . . .	174
4.9.1	General Aspects . . . . .	174
4.9.2	Scattering of Plane Incident Waves by a Circular Sill . . . . .	177
4.10	Head-Sea Incidence on a Slender Topography — The Parabolic Approximation . . . . .	181
4.11	A Numerical Method Based on Finite Elements . . . . .	186
4.11.1	Introduction . . . . .	186
4.11.2	The Variational Principle . . . . .	188
4.11.3	Finite-Element Approximation . . . . .	191
Appendix 4.A	Partial Wave Expansion of the Plane Wave . . . . .	199
<b>5</b>	<b>Harbor Oscillations Excited by Incident Long Waves . . . . .</b>	<b>201</b>
5.1	Introduction . . . . .	201
5.2	Formulation for Harbor Oscillation Problems . . . . .	203
5.3	Natural Modes in a Closed Basin of Simple Form and Constant Depth . . . . .	205
5.3.1	A Rectangular Basin . . . . .	205
5.3.2	A Circular Basin . . . . .	207
5.4	Concept of Radiation Damping — A Model Example . . . . .	208
5.5	Diffraction Through a Narrow Gap . . . . .	212
5.6	Scattering by a Long and Narrow Canal or a Bay . . . . .	218

5.6.1	General Solution . . . . .	218
5.6.2	An Open Narrow Bay . . . . .	222
5.7	A Rectangular Harbor with a Narrow Entrance . . . . .	226
5.7.1	Solution by Matched Asymptotic Expansions . . . . .	228
5.7.2	Resonant Spectrum and Response for Non-Helmholtz Modes . . . . .	232
5.7.3	The Helmholtz Mode . . . . .	235
5.7.4	Numerical Results and Experiments . . . . .	236
5.7.5	Effects of Finite Entry Channel . . . . .	239
5.8	The Effect of Protruding Breakwater . . . . .	240
5.8.1	Representation of Solution . . . . .	241
5.8.2	Reduction to an Integral Equation . . . . .	243
5.8.3	Approximate Solution by Variational Method . . . . .	245
5.8.4	Numerical Results . . . . .	247
5.9	A Harbor with Coupled Basins . . . . .	252
5.10	A Numerical Method for Harbors of Complex Geometry . . . . .	255
5.11	Harbor Response to Transient Incident Wave . . . . .	260
Appendix 5.A	The Source Function for a Rectangular Basin . . . . .	270
Appendix 5.B	Summation of the $\tilde{G}$ Series . . . . .	271
Appendix 5.C	Proof of a Variational Principle . . . . .	273
Appendix 5.D	Evaluation of an Integral . . . . .	274
<b>6</b>	<b>Effects of Head Loss at a Constriction on the Scattering of Long Waves: Hydraulic Theory . . . . .</b>	<b>277</b>
6.1	One-Dimensional Scattering by a Slotted or Perforated Breakwater . . . . .	278
6.1.1	The Field Equations . . . . .	278
6.1.2	The Matching Conditions and the Near Field . . . . .	280
6.1.3	The Coefficients $f$ and $L$ . . . . .	282
6.1.4	Equivalent Linearization . . . . .	285
6.1.5	Approximate and Exact Solutions . . . . .	286
6.2	Effect of Entrance Loss on Harbor Oscillations . . . . .	293
6.2.1	The Boundary-Value Problem . . . . .	294
6.2.2	Local and Mean Square Response in the Harbor . . . . .	296
6.2.3	Approximations for Narrow Entrance . . . . .	298
6.2.4	Small Radiation and Friction Damping . . . . .	299
6.2.5	Large Friction Damping . . . . .	301
6.2.6	Numerical Results for General $W$ . . . . .	302
Appendix 6.A	Approximations of an Integral for $ka \ll 1$ . . . . .	304

<b>7</b>	<b>Multiple Scattering by Seabed Irregularities . . . . .</b>	<b>307</b>
7.1	Field Evidence of Periodic Longshore Bars . . . . .	308
7.2	Evolution Equations for Bragg-Scattering . . . . .	310
7.3	Normal Incidence . . . . .	315
7.3.1	Subcritical Detuning: $0 < \Omega < \Omega_0$ . . . . .	316
7.3.2	Supercritical Detuning: $\Omega > \Omega_0$ . . . . .	316
7.4	Randomly Rough Seabed–Envelope Equation . . . . .	323
7.5	Change of Wave Amplitude by Disorder . . . . .	329
7.6	Change of Wavenumber by Disorder . . . . .	331
	Appendix 7.A Explicit Evaluation of the Coefficient $\beta$ . . . . .	333
<b>8</b>	<b>Floating Body Dynamics: Diffraction and Radiation by Large Bodies . . . . .</b>	<b>337</b>
8.1	Introduction . . . . .	337
8.2	Linearized Equations of Motion for a Constrained Floating Body . . . . .	340
8.2.1	The Kinematic Condition . . . . .	340
8.2.2	Conservation of Linear Momentum . . . . .	343
8.2.3	Conservation of Angular Momentum . . . . .	346
8.2.4	Summary of Dynamic Equations for a Floating Body in Matrix Form . . . . .	352
8.3	Simple Harmonic Motion . . . . .	356
8.3.1	Decomposition into Diffraction and Radiation Problems . . . . .	356
8.3.2	Exciting and Restoring Forces; Added Mass and Radiation Damping for a Body of Arbitrary Shape . . . . .	358
8.4	Formal Representations of Velocity Potential when $h = \text{Constant}$ . . . . .	360
8.4.1	Away from the Body . . . . .	360
8.4.2	The Entire Fluid Domain . . . . .	364
8.5	Scattering by a Vertical Cylinder with Circular Cross Section . . . . .	368
8.6	General Identities for the Diffraction and Radiation of Simple Harmonic Waves . . . . .	375
8.6.1	Relations between Two Radiation Problems and their Consequences . . . . .	376
8.6.2	Relations between Two Diffraction Problems . . . . .	378

8.6.3	One Diffraction Problem and One Radiation Problem . . . . .	383
8.7	Numerical Solution by Hybrid Element Method . . . . .	387
8.7.1	The Variational Formulation . . . . .	388
8.7.2	The Approximate Solution . . . . .	390
8.7.3	A Theoretical Property of the Hybrid Element Method . . . . .	393
8.7.4	A Numerical Example . . . . .	394
8.8	Remarks on the Numerical Methods by Integral Equations . . . . .	398
8.8.1	The Integral Equations . . . . .	398
8.8.2	Irregular Frequencies . . . . .	400
8.9	Power Absorption by Floating Bodies . . . . .	403
8.9.1	Introduction . . . . .	403
8.9.2	A Two-Dimensional Beam–Sea Absorber — Salter’s Cam (Duck) . . . . .	406
8.9.3	Optimum Efficiency of Three-Dimensional Absorbers . . . . .	412
8.10	Trapped Modes Near a Mobile Storm Barrier . . . . .	425
8.10.1	The Two-Gate Mode in an Infinitely Long Barrier . . . . .	427
8.10.2	Multi-Gate Modes in a Barrier of Finite Length	431
8.11	Drift Forces . . . . .	435
8.12	Principles of Calculating the Transient Motion of a Floating Body . . . . .	442
8.12.1	Radiated Waves Caused by Impulsive Motion of a Floating Body . . . . .	442
8.12.2	Relation to the Frequency Response . . . . .	445
8.12.3	Exciting Force Caused by Scattering of Transient Incident Waves . . . . .	447
8.12.4	Linearized Equations of Transient Motion of a Floating Body . . . . .	449
Appendix 8.A	Derivation of Green’s Function . . . . .	450
<b>9</b>	<b>Viscous Damping in Small-Amplitude Waves . . . . .</b>	<b>455</b>
9.1	Introduction . . . . .	455
9.2	Linearized Equations of Viscous Flows and the Laminar Boundary Layer . . . . .	455
9.3	Damping Rate and the Process of Energy Transfer . . . . .	459

9.3.1	The Entire Fluid . . . . .	463
9.3.2	Meniscus Boundary Layer . . . . .	464
9.3.3	Wall Boundary Layer . . . . .	464
9.3.4	Interior Core . . . . .	465
9.3.5	The Damping Rate . . . . .	466
9.4	Damping Rate by a Perturbation Analysis . . . . .	467
9.5	Details for Standing Waves in a Circular Basin . . . . .	473
9.6	The Effect of Air on the Damping of Deep Water Waves . . . . .	478
9.7	The Turbulent Boundary Layer Near a Rough Bottom . . . . .	483
9.7.1	The Boundary-Layer Structure . . . . .	483
9.7.2	The Friction Coefficient . . . . .	486
9.7.3	Bottom Friction on the Damping of Standing Shallow-Water Waves in a Basin . . . . .	487
Appendix 9.A	An Equipartition Theorem . . . . .	490
References	. . . . .	491
Subject Index	. . . . .	I-1

## Part 2

<i>Preface to Part 2</i>	. . . . .	vii
<b>10 Mass Transport Due to Viscosity</b>	. . . . .	509
10.1	Introduction . . . . .	509
10.2	Mass Transport Near the Sea Bottom — General Theory . . . . .	510
10.3	Bottom Mass Transport Under a Long Crested Wave . . . . .	518
10.4	Bottom Mass Transport Near a Small Structure . . . . .	527
10.5	Remarks on Induced Streaming Outside the Stokes Boundary Layer . . . . .	532
10.6	Creeping Flow Theory of Mass Transport in a Channel of Finite Depth . . . . .	536
10.7	Further References . . . . .	545
<b>11 Radiation Stresses, Bound Long Waves and Longshore Current</b>	. . . . .	547
11.1	Introduction . . . . .	547

11.2	Depth and Time-Averaged Equations for the Mean Motion . . . . .	549
11.2.1	Averaged Equation of Mass Conservation . . . . .	550
11.2.2	Averaged Equations of Momentum Conservation . . . . .	551
11.2.3	Some Preliminary Simplifications . . . . .	555
11.2.4	Summary of Approximate Averaged Equations . . . . .	560
11.3	Radiation Stresses in the Shoaling Zone . . . . .	561
11.4	Long Waves Forced by Radiation Stress of Short Waves . . . . .	565
11.4.1	Set-Down or Bound Long Wave . . . . .	566
11.4.2	Parasitic Long Seiches in a Wave Flume . . . . .	567
11.5	Empirical Knowledge of Breaking Waves . . . . .	570
11.5.1	Breaking of Standing Waves on a Slope . . . . .	570
11.5.2	Types of Breakers on Mild Beaches . . . . .	572
11.5.3	Maximum Wave Height . . . . .	573
11.6	The Structure of a Uniform Longshore Current on a Plane Beach . . . . .	575
11.6.1	Shoaling Zone: $x > x_b$ . . . . .	575
11.6.2	Surf Zone: $x < x_b$ . . . . .	578
11.7	Other Empirical Hypotheses or Improvements . . . . .	583
11.7.1	Bottom Friction . . . . .	583
11.7.2	Lateral Turbulent Diffusion $S''_{xy}$ . . . . .	588
11.8	Currents Behind an Offshore Breakwater . . . . .	590
11.8.1	The Wave Field . . . . .	592
11.8.2	The Mean Motion . . . . .	597
11.9	Currents Around a Conical Island . . . . .	602
11.9.1	The Wave Field . . . . .	603
11.9.2	The Mean Motion . . . . .	603
11.10	Related Works on Nearshore Currents . . . . .	608
<b>12</b>	<b>Nonlinear Long Waves in Shallow Water . . . . .</b>	<b>611</b>
12.1	Derivation and Classification of Approximate Equations . . . . .	611
12.2	Nondispersive Waves in Water of Constant Depth . . . . .	620
12.2.1	Analogy to Gas Dynamics . . . . .	620
12.2.2	Method of Characteristics for One-Dimensional Problems . . . . .	621
12.2.3	Simple Waves and Constant States . . . . .	625

12.2.4	Expansion and Compression Waves — Tendency of Breaking . . . . .	626
12.3	Nonbreaking Waves on a Slope . . . . .	630
12.3.1	Standing Waves of Finite Amplitude . . . . .	633
12.3.2	Matching with Deep Water . . . . .	637
12.3.3	Transient Responses to Initial Inputs . . . . .	640
12.4	Subharmonic Resonance of Edge Waves . . . . .	642
12.4.1	Perfect Tuning . . . . .	643
12.4.2	Effects of Detuning . . . . .	650
12.5	Dispersive Long Waves of Permanent Form . . . . .	655
12.5.1	Solitary Waves . . . . .	657
12.5.2	Cnoidal Waves . . . . .	658
12.5.3	The Korteweg–de Vries (KdV) Equation . . . . .	665
12.6	Nonlinear Dispersive Standing Waves on a Horizontal Bottom . . . . .	666
12.7	Evolution of an Initial Pulse . . . . .	670
12.8	Fission of Solitons by Decreasing Depth . . . . .	676
12.9	Viscous Damping of Solitary Waves . . . . .	681
12.10	Remarks on Modeling Large-Scale Tsunamis . . . . .	688
12.11	Evolution of Periodic Waves . . . . .	694
12.11.1	The Initial Development of Near-Resonant Interaction in Water of Constant Depth . . . . .	697
12.11.2	Governing Equations for Coupled Harmonics . . . . .	701
12.11.3	Exact Solution of the Two-Harmonics Problem . . . . .	703
12.12	Nonlinear Resonance in a Narrow Bay . . . . .	710
12.13	Solitons Upstream of a Ship Advancing in a River . . . . .	718
12.14	Localization of Solitons Over a Randomly Rough Seabed . . . . .	730
12.14.1	Asymptotic Equation for Uni-Directional Waves . . . . .	730
12.14.2	Gaussian Correlation Function . . . . .	735
12.14.3	Computed Results of Soliton Evolution Over a Long Rough Seabed . . . . .	737
Appendix 12.A	Evaluation of Certain Integrals in Section 12.4 . . . . .	738
Appendix 12.B	Reduction of an Integral in Section 12.9 . . . . .	739
Appendix 12.C	The Square of a Fourier Series . . . . .	740
Appendix 12.D	Details of Random Forcing . . . . .	742
Appendix 12.E	Details of $\beta$ . . . . .	743

<b>13</b>	<b>Narrow-Banded Nonlinear Waves in Water of Intermediate or Great Depth</b>	<b>745</b>
13.1	Introduction	745
13.2	Evolution Equations for Slowly Modulated Weakly Nonlinear Waves	747
13.2.1	Intermediate Depth	747
13.2.2	Deep Water Limit	756
13.3	Uniform Stokes' Waves	758
13.4	Side-Band Instability of Stokes' Waves	760
13.5	Permanent Envelopes in Deep Water	770
13.6	Transient Evolution Wave Envelope on Deep Water	774
13.6.1	Evolution of a Single Pulse	779
13.6.2	Evolution of the Front of a Uniform Wavetrain	784
13.6.3	Periodic Modulation of a Uniform Wavetrain — Evolution Beyond the Initial Stage of Instability	786
13.7	Infragravity Waves Over Slowly Varying Depth	789
13.7.1	Equation for Long Waves Forced by One Train of Short Waves	790
13.7.2	Short-Wave Envelope	794
13.7.3	Mean Sea-Level	797
13.7.4	Free and Bound Infragravity Waves	798
13.8	Infragravity Waves Over Periodic Bars	804
13.9	Remarks on Third-Order Nonlinear Effects of Short Waves Over Slowly Varying Depth	808
13.10	Diffraction of Steady Stokes' Waves by a Thin Wedge	809
13.11	Soliton Envelopes in the Wake of a Ship	816
13.12	Second-Order Diffraction by a Vertical Cylinder	825
13.12.1	First-Order Solution	826
13.12.2	The Second-Order Problem	827
13.12.3	Second-Order Forcing	828
13.12.4	Second-Order Boundary-Value Problems	830
13.12.5	Response to $\mathcal{I}$	830
13.12.6	Response to $\mathcal{S}$	832
13.12.7	Sample Numerical Results	835
Appendix 13.A	Asymptotic Behavior $\xi_0$ in the Far-Field	836
Appendix 13.B	Weak Radiation Condition	837

<b>14 Broad-Banded Nonlinear Surface Waves in the</b>	
<b>Open Sea</b> . . . . .	839
14.1 Background . . . . .	840
14.2 Fourier Formulation . . . . .	842
14.3 Multiple Time Scales . . . . .	846
14.4 Conditions for Quartet Resonance . . . . .	851
14.5 Simple Solutions . . . . .	854
14.6 Interaction of Two Waves . . . . .	856
14.7 Interaction of Four Waves (Quartet Interaction) . . . . .	857
14.7.1 Reduction to One Unknown . . . . .	858
14.7.2 Solution for Periodic Envelopes . . . . .	861
14.8 The Cubic Schrödinger Equation . . . . .	864
14.9 Benjamin–Feir Instability of Stokes Waves . . . . .	866
14.10 Kinetic Equation of Hasselmann . . . . .	872
14.11 Extensions . . . . .	876
Appendix 14.A Details of Derivation . . . . .	878
Appendix 14.A.1 Fourier Transforms of the Free Surface Conditions . . . . .	878
Appendix 14.A.2 Surface Properties for Waves of Small Steepness . . . . .	879
Appendix 14.A.3 Inverting (14.2.9) by Iteration . . . . .	880
Appendix 14.B Kernels . . . . .	882
<b>15 Numerical Simulation of Nonlinear Wave Dynamics</b> . . . . .	885
15.1 Introduction . . . . .	885
15.2 General Initial Boundary-Value Problem . . . . .	887
15.3 High-Order Spectral (HOS) Method . . . . .	888
15.3.1 Mathematical Formulation . . . . .	890
15.3.2 Numerical Implementation . . . . .	896
15.3.3 Error Considerations . . . . .	897
15.3.4 Relation to Frequency-Domain Perturbation Results . . . . .	900
15.4 Applications of HOS to Nonlinear Wave-Wave, Wave-Current, and Wave-Bottom Interactions . . . . .	902
15.4.1 Stokes Waves . . . . .	902
15.4.2 Wave Steepening . . . . .	905
15.4.3 Modulation of a Stokes Wave Train due to Type I Instabilities . . . . .	908
15.4.4 Evolution of a Wave Packet . . . . .	912

15.4.5	Nonlinear Three-Dimensional Waves due to a Moving Surface Disturbance . . . . .	916
15.4.6	Nonlinear Wave Interaction with Ambient Current . . . . .	923
15.4.7	Generalized Bragg Scattering of Surface Waves by Bottom Ripples . . . . .	930
15.5	HOS Method for Nonlinear Wave Interaction with Submerged Bodies . . . . .	943
15.5.1	Mathematical Formulation . . . . .	943
15.5.2	Numerical Implementation . . . . .	945
15.5.3	Application to Nonlinear Wave Diffraction by a Submerged Circular Cylinder . . . . .	947
15.6	High-Order Spectral Element (HOSE) Method . . . . .	955
15.6.1	Mathematical Formulation . . . . .	956
15.6.2	Numerical Implementation . . . . .	960
15.6.3	Application of HOSE to the Study of Stability of Standing Waves in a Circular Tank . . . . .	963
15.7	Mixed Euler-Lagrangian Method . . . . .	972
15.7.1	Cauchy's Integral Formulation . . . . .	974
15.7.2	Green's Integral Formulation . . . . .	976
15.7.3	Numerical Implementation . . . . .	983
15.7.4	Application to Two- and Three-Dimensional Breaking Waves . . . . .	988
15.7.5	Application to Steep Crescent Waves . . . . .	1007
15.7.6	Application to Free-Surface Flow over an Impulsively Started Point Sink . . . . .	1015
15.7.7	Application to Plunging Wave Impact on a Vertical Wall . . . . .	1023
15.7.8	Application to Nonlinear Wave Interaction with Floating Bodies . . . . .	1033
	References . . . . .	1043
