Preface	v
List of Contributors	xvii
Chapter 1 The Machine and Detector	1
<i>G.A. Blair and D.J. Miller</i>	
1 Introduction	1
2 The Machine	1
2.1 Required Energy and Luminosity	1
2.2 Why a Linear Collider?	3
2.3 The Proposed Machines	7
2.4 X-ray Free Electron Laser	11
2.5 Electron and Positron Sources	13
2.6 Damping Rings	13
2.7 Final Focus	14
2.8 Crossing Angle and Number of Collision Points	15
2.9 Measuring Beam Energy and Luminosity Spectrum	16
2.10 The $\gamma\gamma$, γe and e^-e^- Options	18
2.11 The GigaZ Option	19
3 Machine Detector Interface	20
3.1 Backgrounds	20
3.2 Mask Region	23
4 Requirements for the Detectors	24
4.1 Energy Flow	26
4.2 Tracking	27
4.2.1 Momentum Vector Measurement	27
4.2.2 Vertexing Systems	31
4.3 Calorimetry	33
4.3.1 Electromagnetic Calorimeter	34
4.3.2 Hadronic Calorimeter	35
References	36

Chapter 2 Higgs Physics at the Linear Collider	41
<i>John F. Gunion, Howard E. Haber and Rick Van Kooten</i>	
1 Introduction	41
2 Expectations for Electroweak Symmetry Breaking	44
3 The Standard Model Higgs Boson-Theory	50
3.1 Standard Model Higgs Boson Decay Modes	50
3.2 Standard Model Higgs Boson Production at the LC	52
4 SM Higgs Searches before the Linear Collider	54
4.1 Direct Search Limits from LEP	54
4.2 Implications of Precision Electroweak Measurements	54
4.3 Expectations for Tevatron Searches	56
4.4 Expectations for LHC Searches	58
5 Higgs Bosons in Low-energy Supersymmetry	60
5.1 MSSM Higgs Sector at Tree Level	63
5.2 The Radiatively Corrected MSSM Higgs Sector	65
5.3 MSSM Higgs Boson Decay Modes	72
5.4 MSSM Higgs Boson Production at the LC	73
6 MSSM Higgs Boson Searches before the LC	75
6.1 Direct Search Limits from LEP	75
6.2 MSSM Higgs Searches at the Tevatron	76
6.3 MSSM Higgs Searches at the LHC	77
7 Non-exotic Extended Higgs Sectors	80
7.1 The Decoupling Limit	81
7.2 Constraints from Precision Electroweak Data and LC Implications	82
7.3 Constraints on Higgs Bosons with VV Coupling	84
7.4 Detection of Non-exotic Extended Higgs Sector Scalars at the Tevatron and LHC	85
7.5 LC Production Mechanisms for Non-exotic Extended Higgs Sector Scalars	86
8 Exotic Higgs Sectors and Other Possibilities	89
8.1 A Triplet Higgs Sector	90
8.2 Pseudo Nambu Goldstone Bosons	91
9 LC Measurements of Higgs Boson Properties	91
9.1 Mass	92
9.2 Coupling Determinations — Light Higgs Boson	95
9.2.1 Cross Sections	95
9.2.2 Branching Ratios	96
9.2.3 Radiative Production, $t\bar{t}h$	98

9.2.4	Self-Coupling	99
9.2.5	Implications for the MSSM Higgs Sector	101
9.3	Coupling Determinations — Intermediate Mass Higgs Boson	103
9.3.1	Cross Sections	103
9.3.2	Branching Ratios	104
9.4	Coupling Determinations — Heavy Higgs Boson	105
9.4.1	Cross Sections	105
9.4.2	Branching Ratios	105
9.5	Summary of Couplings	106
9.6	Total Width	107
9.7	Quantum Numbers	108
9.8	Precision Studies of Non-SM-like Higgs Bosons	111
10	The Giga- Z Option — Implications for Higgs Physics	113
10.1	Giga- Z and the MSSM	113
10.2	Giga- Z and Non-exotic Extended Higgs Sectors	115
11	The $\gamma\gamma$ Collider Option	115
12	Concluding Remarks	121
	Acknowledgments	121
	References	122
 Chapter 3 Top Quark Physics		135
	<i>Y. Sumino</i>	
1	Introduction	135
2	Top Quark Threshold Region	136
2.1	Physics Motivations and Goals	137
2.1.1	Top Mass Determination	137
2.1.2	Testing Dynamics of $t\bar{t}$ Resonances	137
2.1.3	Examinations of Various Top Quark Interactions	138
2.2	Top Quark Mass	138
2.2.1	How to Determine the Mass	138
2.2.2	Simulation Studies on Expected Precision	139
2.2.3	Renormalon Problem and Renormalon Cancellation	140
2.2.4	Theoretical Prediction for the $1S$ Energy Level	142
2.2.5	Physical Implications	143
2.2.6	Remaining Theoretical Uncertainties	145
2.3	Dynamics and Observables	145
2.3.1	Time Evolution	145
2.3.2	Production Process of Top Quarks	148
2.3.3	Decay of Top Quarks and Final-State Interactions	155

2.4	Measurements of Top Quark Couplings	162
2.4.1	Measurements of $\Gamma_t, g_{tH}, \alpha_s$	163
2.4.2	CP Violating Couplings	170
2.4.3	Production and Decay Vertices	174
3	Open Top Region	175
3.1	Short Review	175
3.1.1	Yukawa Coupling	175
3.1.2	Form Factors	176
3.1.3	Top Mass Reconstruction	177
3.2	Use of Inclusive Observables in Studying Form Factors	178
4	Conclusions	182
	References	183
Chapter 4 Supersymmetry and the Linear Collider		187
<i>Jonathan L. Feng and Mihoko M. Nojiri</i>		
1	Introduction	187
2	The Minimal Supersymmetric Standard Model	189
2.1	Particle Content	189
2.2	Supersymmetric Matter Interactions	191
2.3	Supersymmetric Gauge Interactions	194
2.4	Supersymmetry-breaking Terms	194
2.5	Sleptons	196
2.6	Charginos and Neutralinos	198
3	Successes and Puzzles	199
3.1	Unification	200
3.2	Dark Matter	201
3.3	Flavor Violation	202
3.4	CP Violation	204
3.5	Proton Decay	204
4	Models	205
4.1	Minimal Supergravity	207
4.2	Focus Point Supersymmetry	210
4.3	Superheavy Supersymmetry	212
4.4	Gauge Mediation	213
4.5	Anomaly Mediation	215
4.6	GUT and Planck Scale Frameworks	217
5	Slepton Studies	218
5.1	Signal and Background	218
5.2	Slepton Masses	220

5.3	Polarized Cross Sections	225
5.4	Lepton Flavor Violation	229
5.5	Tau Polarization from Stau Decay	232
6	Chargino and Neutralino Studies	234
6.1	Signal and Background	234
6.2	Masses and Polarized Cross Sections	235
6.3	CP Violation	238
7	Testing Supersymmetry	241
7.1	Verifying Supersymmetry	241
7.2	Super-oblique Parameters	243
8	Determining the Scale of Supersymmetry Breaking	246
9	Extrapolation to the Planck Scale	247
10	Connections to Cosmology	248
11	Conclusions	252
	Acknowledgements	253
	References	253

Chapter 5 Dynamical Electroweak Symmetry Breaking . . . 259

Wolfgang Kilian

1	Introduction	259
1.1	Particle Masses	259
1.2	Exponentials	261
1.3	Higgs or No Higgs?	262
1.4	Models of Dynamical Symmetry Breaking	263
2	Effective Theories of Electroweak Interactions	264
2.1	The Bottom-up Approach	264
2.2	Anomalous Couplings	269
2.3	Custodial Symmetry	270
3	Goldstone Boson Scattering	271
3.1	Quasielastic Scattering at Leading Order	272
3.2	Custodial Symmetry Relations	272
3.3	Next-to-leading Order Contributions	273
3.4	Unitarity Constraints	274
3.5	Resonances and New Particles	276
4	Measuring Higgs Sector Parameters at a Linear Collider	279
4.1	Precision Observables	279
4.2	Triple Gauge Couplings	282
4.3	W and Z Scattering Amplitudes	284
5	Conclusions	287
	References	288

Chapter 6 Physics of Electroweak Gauge Bosons	291
<i>Klaus Mönig</i>	
1 Introduction	291
2 Production of Gauge Bosons	294
3 Properties of Gauge Bosons	296
3.1 Standard Model Predictions	296
3.2 Status at Present Colliders	299
3.3 Prospects for the Linear Collider	301
3.4 Interpretation of the Precision Measurements	306
4 Measurements of the CKM Matrix	308
5 Interactions amongst Gauge Bosons	312
5.1 Experimental Procedures	314
5.2 Results at LEP and the TEVATRON	318
5.3 Expectation from the Linear Collider	319
6 Strong Electroweak Symmetry Breaking	321
7 Conclusions	327
References	328
Chapter 7 New Physics at the TeV Scale and Beyond	331
<i>JoAnne L. Hewett</i>	
1 Introduction	331
2 Contact Interactions and Compositeness	334
3 Extended Gauge Sectors	338
3.1 Z' Discovery Limits and Identification	340
3.2 W' Discovery Limits and Identification	344
4 Extra Spatial Dimensions	347
4.1 Large Extra Dimensions	348
4.2 TeV-scale Extra Dimensions	356
4.3 Warped Extra Dimensions with Localized Gravity	363
5 Direct Production of New Particles	368
5.1 New Leptons	369
5.2 Leptoquarks	370
6 Unconventional Theories and Possible Surprises	372
6.1 String Resonances	373
6.2 Non-Commutative Field Theories	374
7 Conclusions	376
References	377

Chapter 8 QCD	383
<i>Philip N. Burrows</i>	
1 Introduction	383
1.1 Hadronic Final States	383
1.2 Quantum Chromodynamics	385
1.3 QCD and the Linear Collider	386
2 Event Selection	386
2.1 The Problem	386
2.2 Initial State Radiation and Beamstrahlung	387
2.3 Selection Cuts	387
3 Precise Measurement of α_s	388
3.1 Introduction	388
3.2 Current Status	389
3.3 Measurement of α_s at the Linear Collider	389
3.3.1 Event Shape Observables	390
3.3.2 The $t\bar{t}$ System	394
3.3.3 A High-luminosity Run at the Z^0 Resonance	396
4 Q^2 Evolution of α_s	396
5 QCD Studies of $t\bar{t}g$ Events	398
5.1 Soft Gluon Radiation in $t\bar{t}g$ Events	398
5.2 Anomalous Chromomagnetic Top Quark Couplings	398
6 Symmetry Tests Using Beam Polarisation	400
7 Further Important Topics	402
7.1 Casimir Factor Analysis	402
7.2 Charged Particle Multiplicity	403
7.3 Colour Reconnection Effects	404
7.4 Hadronisation Studies and Renormalon Physics	404
7.5 Jet Properties and Detector Design	405
8 Summary and Conclusions	406
Acknowledgements	406
References	406
Chapter 9 Gamma-Gamma and Other Options	409
<i>Tohru Takahashi</i>	
1 Introduction	409
2 Luminosity	410
2.1 $\gamma\gamma$ Collider	410
2.2 $e\gamma$ Collider	414
2.3 e^-e^- Collider	416
2.4 Summary of the Luminosities	417

3	Higgs Boson in $\gamma\gamma$ Interaction	417
3.1	Two Photon Decay Width of the Light Higgs Bosons	419
3.2	Heavy Higgs Bosons	420
3.3	Measurement of CP Nature of the Higgs Boson	421
4	Supersymmetry	422
4.1	Sfermion and Chargino Production by $\gamma\gamma$ Collisions	422
4.2	Selectron in the $e\gamma$ Collisions	423
4.3	Selectron in e^-e^- Collisions	424
5	Precise Measurement of Standard Model Particles	426
5.1	Anomalous Coupling of the W Bosons	426
5.2	Top Quarks in the $\gamma\gamma$ Interaction	428
5.3	Precise Determination of Weinberg Angle by e^-e^- Interaction	429
5.4	Search for the Extra-Dimensions	430
6	Other Experimental Issues	431
6.1	Hadronic Cross Section	431
6.2	Luminosity Measurement	432
7	Summary	434
	References	435

Chapter 10 CP Violation at the Linear Collider 437

David Atwood and Amarjit Soni

1	Introduction	437
2	Single Top Polarimetry	438
3	Top Pair Polarimetry	440
3.1	Constraints on Top Dipole Moments	446
4	Three Particle Final States	447
4.1	Tree Level $e^+e^- \rightarrow t\bar{t}H$ and $e^+e^- \rightarrow t\bar{t}Z$	447
4.2	CP Asymmetries in $e^+e^- \rightarrow Zh$ with Subsequent Higgs Decay $h \rightarrow t\bar{t}$	455
5	Some Other Topics, in Brief	458
5.1	Threshold Studies of $e^+e^- \rightarrow t\bar{t}$	458
5.2	$e^+e^- \rightarrow t\bar{t}g$	458
5.3	$e^+e^- \rightarrow t\bar{t}\nu_e\bar{\nu}_e$	458
	Acknowledgments	459
	References	459

Chapter 11 Overall Perspective	463
<i>Keisuke Fujii and Michael E. Peskin</i>	
1 Grand View of Particle Physics	463
2 Highlights of the LC Physics Programs	465
2.1 The Higgs Boson	465
2.2 Supersymmetry	467
2.3 The Top Quark and the W Boson	468
2.4 Z^0 's and Other 4-fermion Interactions	469
3 Relation of the ILC to the LHC	470
4 Experimentation at the ILC	473
5 Benchmark Processes for Evaluating the ILC Detectors	476
5.1 $e^+e^- \rightarrow Zh$	477
5.2 $e^+e^- \rightarrow Zh\bar{h}$	479
5.3 $e^+e^- \rightarrow t\bar{t}h$	479
5.4 $e^+e^- \rightarrow t\bar{t}$	480
5.5 $e^+e^- \rightarrow \tilde{e}_R^+ \tilde{e}_R^-, \tilde{\mu}_R^+ \tilde{\mu}_R^-$	481
5.6 $e^+e^- \rightarrow \tilde{\chi}_1^+ \tilde{\chi}_1^-$	483
5.7 $e^+e^- \rightarrow \tilde{\tau}_1^+ \tilde{\tau}_1^+$	484
5.8 $e^+e^- \rightarrow \tilde{\chi}_1^0 \tilde{\chi}_1^0$ (GMSB)	485
6 Choice of the LC Energy and Luminosity	486
7 Conclusions	488
Acknowledgements	489
References	489
Index	491
