<i>Preface</i>	vii
1. Cancer and somatic evolution	1
1.1 What is cancer? . . . . .	1
1.2 Basic cancer genetics . . . . .	2
1.3 Multi-stage carcinogenesis and colon cancer . . . . .	4
1.4 Genetic instability . . . . .	6
1.5 Barriers to cancer progression: importance of the microenvironment . . . . .	8
1.6 Evolutionary theory and Darwinian selection . . . . .	10
2. Mathematical modeling of tumorigenesis	13
2.1 Ordinary differential equations . . . . .	14
2.2 Partial differential equations . . . . .	16
2.3 Discrete, cellular automaton models . . . . .	20
2.4 Stochastic modeling . . . . .	22
2.5 Statistics and parameter fitting . . . . .	25
2.6 Concluding remarks . . . . .	26
3. Cancer initiation: one-hit and two-hit stochastic models	27
3.1 A one-hit model . . . . .	28
3.1.1 Mutation-selection diagrams and the formulation of a stochastic process . . . . .	28
3.1.2 Analysis of a one-hit process . . . . .	30
3.2 A two-hit model . . . . .	35
3.2.1 Process description . . . . .	35

3.2.2	Two ways to acquire the second hit . . . . .	36
3.2.3	The regime of tunneling . . . . .	37
3.2.4	Genuine two-step processes . . . . .	44
3.2.5	Summary of the two-hit model with a constant population . . . . .	44
3.3	Modeling non-constant populations . . . . .	45
3.3.1	Description of the model . . . . .	45
3.3.2	A one-hit process . . . . .	47
3.3.3	Three types of dynamics . . . . .	48
3.3.4	Probability to create a mutant of type “C” . . . . .	49
3.3.5	A two-hit process . . . . .	49
3.4	Overview . . . . .	51
4.	Microsatellite and chromosomal instability in sporadic and familial cancers . . . . .	53
4.1	Some biological facts about genetic instability in colon cancer . . . . .	55
4.2	A model for the initiation of sporadic colorectal cancers . . . . .	55
4.3	Sporadic colorectal cancers, CIN and MSI . . . . .	60
4.4	FAP . . . . .	65
4.5	HNPCC . . . . .	67
4.6	Insights following from this analysis . . . . .	68
5.	Cellular origins of cancer . . . . .	71
5.1	Stem cells, tissue renewal and cancer . . . . .	73
5.2	The basic renewal model . . . . .	74
5.3	Three scenarios . . . . .	77
5.4	Mathematical analysis . . . . .	78
5.5	Implications and data . . . . .	84
6.	Costs and benefits of chromosomal instability . . . . .	87
6.1	The effect of chromosome loss on the generation of cancer . . . . .	88
6.2	Calculating the optimal rate of chromosome loss . . . . .	90
6.3	Why does CIN emerge? . . . . .	95
6.4	The bigger picture . . . . .	98
7.	DNA damage and genetic instability . . . . .	101
7.1	Competition dynamics . . . . .	102
7.2	Competition dynamics and cancer evolution . . . . .	107

7.2.1	A quasispecies model . . . . .	107
7.2.2	Strong apoptosis . . . . .	115
7.2.3	Weak apoptosis . . . . .	118
7.3	Summary of mathematical results . . . . .	119
7.4	Selection for genetic instability . . . . .	121
7.5	Genetic instability and apoptosis . . . . .	122
7.6	Can competition be reversed by chemotherapy? . . . . .	124
8.	Tissue aging and the development of cancer . . . . .	127
8.1	What is aging? . . . . .	128
8.2	Basic modeling assumptions . . . . .	129
8.3	Modeling healthy tissue . . . . .	130
8.4	Modeling tumor cell growth . . . . .	133
8.5	Checkpoints and basic tumor growth . . . . .	136
8.6	Tumor growth and the microenvironment . . . . .	139
8.7	Theory and data . . . . .	141
9.	Basic models of tumor inhibition and promotion . . . . .	147
9.1	Model 1: Angiogenesis inhibition induces cell death . . . . .	149
9.2	Model 2: Angiogenesis inhibition prevents tumor cell division . . . . .	153
9.2.1	Linear stability analysis of the ODEs . . . . .	155
9.2.2	Conclusions from the linear analysis . . . . .	156
9.3	Spread of tumors across space . . . . .	157
9.3.1	Turing stability analysis . . . . .	158
9.3.2	Stationary periodic solutions . . . . .	161
9.3.3	Biological implications and numerical simulations . . . . .	161
9.4	Somatic cancer evolution and progression . . . . .	164
9.5	Clinical implications . . . . .	168
10.	Mechanisms of tumor neovascularization . . . . .	171
10.1	Emergence of the concept of postnatal vasculogenesis . . . . .	172
10.2	Relative importance of angiogenesis versus vasculogenesis . . . . .	173
10.3	Mathematical models of tumor angiogenesis and vasculogenesis . . . . .	174
10.4	Mathematical analysis . . . . .	177
10.5	Applications . . . . .	180
10.5.1	Dynamics of BM-derived EPCs . . . . .	180
