

Preface

This book is a translated and modified (hopefully improved) version of the author's PhD-thesis "Über die Zetafunktion von Formen von Fermatgleichungen". Apart from correcting minor mistakes, explanations and examples as well as chapters recalling basic definitions on zeta functions and l -adic cohomology have been added to assist readers that are not experts in the field.

I want to express my gratitude towards the people without whose help this book could not have been written: Prof. Dr. Uwe Jannsen, the supervisor of my PhD-thesis, who always showed a keen interest in my progress and was always willing to give advise, my best friend and colleague Dr. Kirsten Schneider, who sacrificed many hours to listen to my problems and to give valuable hints, my colleague Dr. Christopher Rupprecht, to whom I owe most of what I know about the classification of Fermat equations, the staff of World Scientific Publishing, who was very helpful and patient, and of course my wife June Roberts, whose trust, love and patience have been essential for me during the last years.
