

Contents

<i>Preface</i>	vii
1. Introduction	1
2. The zeta function	11
3. Galois descent	15
4. Nonabelian cohomology	33
5. Weil cohomology theories and l -adic cohomology	75
6. Classification of forms	93
7. Forms of the Fermat equation I	105
8. Binary cubic equations	135
9. Forms of the Fermat equation II	153
10. Representations of semidirect products	165
11. The l -adic cohomology of Fermat varieties	181
12. The zeta function of forms of Fermat equations	213

Appendix A	Pseudo-abelian categories	217
Appendix B	Computation of $\mathcal{J}_{\mathbb{F}_{25}}^3(1, 1, 1)$	227
	<i>Bibliography</i>	231
	<i>Index</i>	235
