

# CONTENTS

Preface to the Third Edition . . . . .	vii
Preface to the Second Edition . . . . .	ix
Preface to the First Edition . . . . .	xi
<b>1. INTRODUCTION</b>	<b>1</b>
<b>2. THE PATH INTEGRAL APPROACH TO QUANTIZATION</b>	<b>7</b>
2.1 The Path Integral Method in Quantum Mechanics . . . . .	8
2.2 Path Integral Representation of Bosonic Green Functions in Field Theory . . . . .	15
2.3 The Transfer Matrix . . . . .	22
2.4 Path Integral Representation of Fermionic Green Functions . . . . .	23
2.5 Discretizing Space-Time. The Lattice as a Regulator of a Quantum Field Theory . . . . .	33
<b>3. THE FREE SCALAR FIELD ON THE LATTICE</b>	<b>36</b>
<b>4. FERMIONS ON THE LATTICE</b>	<b>43</b>
4.1 The Doubling Problem . . . . .	43
4.2 A Closer Look at Fermion Doubling . . . . .	48
4.3 Wilson Fermions . . . . .	56
4.4 Staggered Fermions . . . . .	57
4.5 Technical Details of the Staggered Fermion Formulation . . . . .	61
4.6 Staggered Fermions in Momentum Space . . . . .	69
4.7 Ginsparg-Wilson Fermions . . . . .	73
<b>5. ABELIAN GAUGE FIELDS ON THE LATTICE AND   COMPACT QED</b>	<b>77</b>
5.1 Preliminaries . . . . .	77
5.2 Lattice Formulation of QED . . . . .	80
<b>6. NON-ABELIAN GAUGE FIELDS ON THE LATTICE   COMPACT QCD</b>	<b>87</b>
<b>7. THE WILSON LOOP AND THE STATIC   QUARK-ANTIQUARK POTENTIAL</b>	<b>95</b>
7.1 A Look at Non-Relativistic Quantum Mechanics . . . . .	96

7.2	The Wilson Loop and the Static $q\bar{q}$ -Potential in QED . . . . .	97
7.3	The Wilson Loop in QCD . . . . .	105
<b>8.</b>	<b>THE <math>Q\bar{Q}</math> POTENTIAL IN SOME SIMPLE MODELS</b>	<b>109</b>
8.1	The Potential in Quenched QED . . . . .	109
8.2	The Potential in Quenched Compact $QED_2$ . . . . .	114
<b>9.</b>	<b>THE CONTINUUM LIMIT OF LATTICE QCD</b>	<b>119</b>
9.1	Critical Behaviour of Lattice QCD and the Continuum Limit . . . . .	119
9.2	Dependence of the Coupling Constant on the Lattice Spacing and the Renormalization Group $\beta$ -Function . . . . .	122
<b>10.</b>	<b>LATTICE SUM RULES</b>	<b>130</b>
10.1	Energy Sum Rule for the Harmonic Oscillator . . . . .	130
10.2	The $SU(N)$ Gauge Action on an Anisotropic Lattice . . . . .	136
10.3	Sum Rules for the Static $q\bar{q}$ -Potential . . . . .	138
10.4	Determination of the Electric, Magnetic and Anomalous Contribution to the $q\bar{q}$ -Potential . . . . .	146
10.5	Sum Rules for the Glueball Mass . . . . .	148
<b>11.</b>	<b>THE STRONG COUPLING EXPANSION</b>	<b>151</b>
11.1	The $q\bar{q}$ -Potential to Leading Order in Strong Coupling . . . . .	151
11.2	Beyond the Leading Approximation . . . . .	154
11.3	The Lattice Hamiltonian in the Strong Coupling Limit and the String Picture of Confinement . . . . .	158
<b>12.</b>	<b>THE HOPPING PARAMETER EXPANSION</b>	<b>170</b>
12.1	Path Integral Representation of Correlation Functions in Terms of Bosonic Variables . . . . .	171
12.2	Hopping Parameter Expansion of the Fermion Propagator in an External Field . . . . .	174
12.3	Hopping Parameter Expansion of the Effective Action . . . . .	179
12.4	The HPE and the Pauli Exclusion Principle . . . . .	183
<b>13.</b>	<b>WEAK COUPLING EXPANSION (I). THE <math>\Phi^3</math>-THEORY</b>	<b>192</b>
13.1	Introduction . . . . .	192
13.2	Weak Coupling Expansion of Correlation Functions in the $\phi^3$ -Theory . . . . .	195
13.3	The Power Counting Theorem of Reisz . . . . .	201

14.	<b>WEAK COUPLING EXPANSION (II). LATTICE QED</b>	209
14.1	The Gauge Fixed Lattice Action . . . . .	209
14.2	Lattice Feynman Rules . . . . .	216
14.3	Renormalization of the Axial Vector Current in One-Loop Order . . . . .	222
14.4	The ABJ Anomaly . . . . .	234
15.	<b>WEAK COUPLING EXPANSION (III). LATTICE QCD</b>	242
15.1	The Link Integration Measure . . . . .	243
15.2	Gauge Fixing and the Faddeev-Popov Determinant . . . . .	247
15.3	The Gauge Field Action . . . . .	252
15.4	Propagators and Vertices . . . . .	257
15.5	Relation Between $\Lambda_L$ and the $\Lambda$ -Parameter of Continuum QCD . . . . .	272
15.6	Universality of the Axial Anomaly in Lattice QCD . . . . .	275
16.	<b>MONTE CARLO METHODS</b>	284
16.1	Introduction . . . . .	284
16.2	Construction Principles for Algorithms. Markov chains . . . . .	286
16.3	The Metropolis Method . . . . .	291
16.4	The Langevin Algorithm . . . . .	293
16.5	The Molecular Dynamics Method . . . . .	295
16.6	The Hybrid Algorithm . . . . .	301
16.7	The Hybrid Monte Carlo Algorithm . . . . .	304
16.8	The Pseudofermion Method . . . . .	307
16.9	Application of the Hybrid Monte Carlo Algorithm to Systems with Fermions . . . . .	313
17.	<b>SOME RESULTS OF MONTE CARLO CALCULATIONS</b>	317
17.1	The String Tension and the $q\bar{q}$ -Potential in the SU(3) Gauge Theory . . . . .	317
17.2	The $q\bar{q}$ -Potential in Full QCD . . . . .	324
17.3	Chiral Symmetry Breaking . . . . .	326
17.4	Glueballs . . . . .	330
17.5	Hadron Mass Spectrum . . . . .	336
17.6	Instantons . . . . .	345
17.7	Flux Tubes in the $q\bar{q}$ and $qqq$ -Systems . . . . .	359
17.8	The Dual Superconductor Picture of Confinement . . . . .	363
17.9	Center Vortices and Confinement . . . . .	373

<b>18. PATH-INTEGRAL REPRESENTATION OF THE THERMODYNAMICAL PARTITION FUNCTION FOR SOME SOLVABLE BOSONIC AND FERMIONIC SYSTEMS</b>	<b>383</b>
18.1 Introduction . . . . .	383
18.2 Path-Integral Representation of the Partition Function in Quantum Mechanics . . . . .	384
18.3 Sum Rule for the Mean Energy . . . . .	386
18.4 Test of the Energy Sum Rule. The Harmonic Oscillator . . . . .	389
18.5 The Free Relativistic Boson Gas in the Path Integral Approach . . . . .	394
18.6 The Photon Gas in the Path Integral Approach . . . . .	398
18.7 Functional Methods for Fermions. Basics . . . . .	401
18.8 Path Integral Representation of the Partition Function for a Fermionic System valid for Arbitrary Time-Step . . . . .	405
18.9 A Modified Fermion Action Leading to Fermion Doubling . . . . .	410
18.10 The Free Dirac Gas. Continuum Approach . . . . .	413
18.11 Dirac Gas of Wilson Fermions on the Lattice . . . . .	417
<b>19. FINITE TEMPERATURE PERTURBATION THEORY OFF AND ON THE LATTICE</b>	<b>424</b>
19.1 Feynman Rules For Thermal Green Functions in the $\lambda\phi^4$ -Theory . . . . .	424
19.2 Generation of a Dynamical Mass at $T \neq 0$ . . . . .	433
19.3 Perturbative Expansion of the Thermodynamical Potential . . . . .	434
19.4 Feynman Rules for QED and QCD at non-vanishing Temperature and Chemical Potential in the Continuum . . . . .	440
19.5 Temporal Structure of the Fermion Propagator at $T \neq 0$ and $\mu \neq 0$ in the Continuum . . . . .	445
19.6 The Electric Screening Mass in Continuum QED in One-Loop Order . . . . .	448
19.7 The Electric Screening Mass in Continuum QCD in One-Loop Order . . . . .	452
19.8 Lattice Feynman Rules for QED and QCD at $T \neq 0$ and $\mu \neq 0$ . . . . .	455
19.9 Particle-Antiparticle Spectrum of the Fermion Propagator at $T \neq 0$ and $\mu \neq 0$ . Naive vs. Wilson Fermions . . . . .	460

19.10	The Electric Screening Mass for Wilson Fermions in Lattice QED to One-Loop Order . . . . .	464
19.11	The Electric Screening Mass for Wilson Fermions in Lattice QCD to One-Loop Order . . . . .	472
19.12	The Infrared Problem . . . . .	482
20.	<b>NON-PERTURBATIVE QCD AT FINITE TEMPERATURE</b>	485
20.1	Thermodynamics on the Lattice . . . . .	485
20.2	The Wilson Line or Polyakov Loop . . . . .	490
20.3	Spontaneous Breakdown of the Center Symmetry and the Deconfinement Phase Transition . . . . .	495
20.4	How to Determine the Transition Temperature . . . . .	496
20.5	A Two-Dimensional Model. Test of Theoretical Concepts . . . . .	498
20.6	Monte Carlo Study of the Deconfinement Phase Transition in the Pure SU(3) Gauge Theory . . . . .	512
20.7	The Chiral Phase Transition . . . . .	520
20.8	Some Monte Carlo Results on the High Temperature Phase of QCD . . . . .	524
20.9	Some Possible Signatures for Plasma Formation . . . . .	532
	Appendix A . . . . .	542
	Appendix B . . . . .	552
	Appendix C . . . . .	554
	Appendix D . . . . .	557
	Appendix E . . . . .	560
	Appendix F . . . . .	562
	Appendix G . . . . .	564
	References . . . . .	571
	Index . . . . .	585
