

# Contents

1. Introduction	1
1.1 Harmonic Maps . . . . .	2
1.2 Related Elliptic Equations . . . . .	8
1.3 Evolution Problems . . . . .	11
1.4 Notation . . . . .	15
2. Analytic Preliminaries	21
2.1 A Few Basic Inequalities Involving Sobolev Spaces . . . . .	21
2.2 The Hodge Decomposition . . . . .	24
2.3 Bounded Mean Oscillation . . . . .	26
2.4 The Hardy Space $\mathcal{H}^1(\mathbb{R}^m)$ . . . . .	35
2.5 A Gagliardo-Nirenberg Type Inequality . . . . .	45
2.6 A Gehring Type Lemma . . . . .	47
3. Harmonic Maps	57
3.1 The Nearest Point Projection and the Second Fundamental Form . . . . .	57
3.2 The Euler-Lagrange Equation . . . . .	61
3.3 Stationary Weakly Harmonic Maps and the Monotonicity Formula . . . . .	63
3.4 Higher Regularity . . . . .	66
3.5 The Target Manifold $\mathbb{S}^{n-1}$ . . . . .	72
3.6 A Moving Tangent Frame Field . . . . .	79
3.7 General Target Manifolds . . . . .	83

3.8	Generalized Harmonic Maps . . . . .	91
3.9	Further Remarks . . . . .	98
3.9.1	Homogeneous Manifolds . . . . .	98
3.9.2	Energy Minimizing Maps . . . . .	100
4.	Almost Harmonic Maps . . . . .	103
4.1	The Monotonicity Formula . . . . .	103
4.2	Hölder Continuity . . . . .	106
4.3	A Lemma of S. Luckhaus . . . . .	109
4.4	More About the Tangent Frame Field . . . . .	116
4.5	An Energy Inequality . . . . .	126
4.6	Small Dimensions . . . . .	134
5.	Evolution Problems . . . . .	143
5.1	The Stability Condition for the Harmonic Map Heat Flow . . . . .	144
5.2	Higher Regularity for Evolution Problems . . . . .	151
5.3	The Heat Flow into Spheres . . . . .	159
5.4	The Heat Flow into General Target Manifolds . . . . .	164
5.5	The Landau-Lifshitz Equation . . . . .	168
5.6	Further Remarks . . . . .	175
5.6.1	The Harmonic Map Heat Flow into Homogeneous Manifolds . . . . .	175
5.6.2	The Landau-Lifshitz Equation for Almost-Kähler Manifolds . . . . .	176
	<i>Bibliography</i> . . . . .	179
	<i>Index</i> . . . . .	183
