<i>Preface</i>	v
<i>Introduction</i>	1
1. Commutative geometry	17
1.1 Commutative algebra	17
1.2 Differential operators on modules and rings	23
1.3 Connections on modules and rings	27
1.4 Homology and cohomology of complexes	31
1.5 Homology and cohomology of groups and algebras	39
1.6 Differential calculus over a commutative ring	56
1.7 Sheaf cohomology	59
1.8 Local-ringed spaces	70
1.9 Algebraic varieties	85
2. Classical Hamiltonian systems	91
2.1 Geometry and cohomology of Poisson manifolds	91
2.2 Geometry and cohomology of symplectic foliations	110
2.3 Hamiltonian systems	115
2.4 Hamiltonian time-dependent mechanics	136
2.5 Constrained Hamiltonian systems	157
2.6 Geometry and cohomology of Kähler manifolds	172
2.7 Appendix. Poisson manifolds and groupoids	189
3. Algebraic quantization	195
3.1 GNS construction I. C^* -algebras of quantum systems	195

3.2	GNS construction II. Locally compact groups	209
3.3	Coherent states	217
3.4	GNS construction III. Groupoids	224
3.5	Example. Algebras of infinite qubit systems	229
3.6	GNS construction IV. Unbounded operators	234
3.7	Example. Infinite canonical commutation relations	238
3.8	Automorphisms of quantum systems	249
4.	Geometry of algebraic quantization	257
4.1	Banach and Hilbert manifolds	257
4.2	Dequantization	271
4.3	Berezin's quantization	274
4.4	Hilbert and C^* -algebra bundles	278
4.5	Connections on Hilbert and C^* -algebra bundles	282
4.6	Example. Instantwise quantization	286
4.7	Example. Berry connection	290
5.	Geometric quantization	295
5.1	Leafwise geometric quantization	295
5.2	Example. Quantum completely integrable systems	306
5.3	Quantization of time-dependent mechanics	312
5.4	Example. Non-adiabatic holonomy operators	324
5.5	Geometric quantization of constrained systems	332
5.6	Example. Quantum relativistic mechanics	335
5.7	Geometric quantization of holomorphic manifolds	342
6.	Supergeometry	347
6.1	Graded tensor calculus	347
6.2	Graded differential calculus and connections	352
6.3	Geometry of graded manifolds	358
6.4	Lagrangian formalism on graded manifolds	366
6.5	Lagrangian supermechanics	382
6.6	Graded Poisson manifolds	385
6.7	Hamiltonian supermechanics	388
6.8	BRST complex of constrained systems	392
6.9	Appendix. Supermanifolds	401
6.10	Appendix. Graded principal bundles	423
6.11	Appendix. The Ne'eman–Quillen superconnection	426

7.	Deformation quantization	433
7.1	Gerstenhaber's deformation of algebras	433
7.2	Star-product	444
7.3	Fedosov's deformation quantization	450
7.4	Kontsevich's deformation quantization	459
7.5	Deformation quantization and operads	472
7.6	Appendix. Monoidal categories and operads	475
8.	Non-commutative geometry	483
8.1	Modules over C^* -algebras	484
8.2	Non-commutative differential calculus	486
8.3	Differential operators in non-commutative geometry	492
8.4	Connections in non-commutative geometry	498
8.5	Connes' non-commutative geometry	503
8.6	Landsman's quantization via groupoids	507
8.7	Appendix. K -Theory of Banach algebras	509
8.8	Appendix. The Morita equivalence of C^* -algebras	512
8.9	Appendix. Cyclic cohomology	514
8.10	Appendix. KK -Theory	518
9.	Geometry of quantum groups	523
9.1	Quantum groups	523
9.2	Differential calculus over Hopf algebras	530
9.3	Quantum principal bundles	535
10.	Appendixes	541
10.1	Categories	541
10.2	Hopf algebras	546
10.3	Groupoids and Lie algebroids	553
10.4	Algebraic Morita equivalence	565
10.5	Measures on non-compact spaces	569
10.6	Fibre bundles I. Geometry and connections	586
10.7	Fibre bundles II. Higher and infinite order jets	611
10.8	Fibre bundles III. Lagrangian formalism	618
10.9	Fibre bundles IV. Hamiltonian formalism	626
10.10	Fibre bundles V. Characteristic classes	633
10.11	K -Theory of vector bundles	648
10.12	Elliptic complexes and the index theorem	650
