*Preface* v

## Aspects of Quantization

1. **G. A. Goldin**  
Diffeomorphism Groups and Quantum Configurations 1
2. **N. P. Landsman**  
Functorial Quantization and the Guillemin–Sternberg Conjecture 23
3. **A. Odziejewicz**  
Coherent State Method in Geometric Quantization 47
4. **C. Roger**  
The Group of Volume Preserving Diffeomorphisms and  
the Lie Algebra of Unimodular Vector Fields: Survey of  
Some Classical and Not-so-classical Results 79

## Symplectic and Poisson Geometry

5. **M. Cahen**  
Moduli Space of Germs of Symplectic Connections of  
Ricci Type 99
6. **A. Odziejewicz and T. S. Ratiu**  
Banach Lie-Poisson Spaces 113

## Other Mathematical Methods

7. **A. B. Antonevich, V. I. Bakhtin and  
A. V. Lebedev**  
Spectra of Operators Associated with Dynamical  
Systems: From Ergodicity to the Duality Principle 129
8. **J. Hilgert**  
An Ergodic Arnold–Liouville Theorem for Locally  
Symmetric Spaces 163
9. **R. P. Langlands**  
The Renormalization Fixed Point as a Mathematical Object 185
10. **R. Picken**  
A Cohomological Description of Abelian Bundles and Gerbes 217
11. **W. Pusz and S. L. Woronowicz**  
On a Quantum Group of Unitary Operators. The  
Quantum  $az + b$  Group 229
