<i>Preface</i>	vii
1. Introduction	1
1.1 Nonlinear systems in engineering . . . . .	1
1.2 This book . . . . .	3
1.3 Chapter by chapter overview . . . . .	5
1.4 Main contributions . . . . .	11
2. Cellular Neural/Nonlinear Networks	15
2.1 CNN . . . . .	15
2.1.1 1-D CNNs . . . . .	16
2.1.2 2-D CNNs . . . . .	18
2.2 CNN models . . . . .	21
2.2.1 Chua-Yang CNN model . . . . .	21
2.2.2 State controlled CNN (SC-CNN) model . . . . .	22
2.2.3 Full-range CNN model . . . . .	22
2.2.4 Reaction-diffusion CNN model . . . . .	24
2.2.5 Generalized CNN models . . . . .	25
2.2.5.1 A generalized CNN model: nonlinear and de- lay CNNs . . . . .	25
2.2.5.2 Another generalized CNN model . . . . .	26
2.2.5.3 A generalized CNN based on Chua's circuit	27
2.3 CNN universal machine: a visual microprocessor . . . . .	27
2.4 New research directions in CNNs . . . . .	30
2.4.1 Wave computing algorithm . . . . .	30
2.4.2 Coupled local minimizers . . . . .	32

2.4.3	Pattern formation on the ACE16k CNN Chip . . . . .	35
2.4.3.1	Experimental results: Autowaves . . . . .	38
2.4.3.2	Experimental results: Spiral waves . . . . .	39
2.4.4	Propagation of autowaves on the inhomogeneous CNN arrays . . . . .	40
2.5	Conclusion . . . . .	44
3.	Multi-Scroll Chaotic and Hyperchaotic Attractors . . . . .	45
3.1	Chua's circuit . . . . .	46
3.1.1	Chaos in Chua's circuit . . . . .	47
3.1.1.1	The Shilnikov method . . . . .	47
3.1.1.2	Harmonic balance method . . . . .	52
3.1.2	Realization of Chua's circuit . . . . .	57
3.2	Generalized Chua's circuit . . . . .	58
3.2.1	Realization of $n$ -scroll attractors from generalized Chua's circuits . . . . .	63
3.2.1.1	Realization of 3- and 5-scroll attractors . . . . .	64
3.2.1.2	On the realization of $n$ -scroll attractors . . . . .	69
3.2.1.3	Alternative realizations of $n$ -scroll attractors . . . . .	71
3.3	Families of scroll grid attractors . . . . .	73
3.3.1	A new family of $n$ -scroll attractors . . . . .	75
3.3.2	2-D scroll grid attractors . . . . .	77
3.3.3	3-D scroll grid attractors . . . . .	81
3.3.4	Circuit realizations . . . . .	83
3.3.5	Alternative realizations . . . . .	89
3.4	Multi-scroll hyperchaotic attractors . . . . .	91
3.4.1	Hyperchaotic $n$ -scroll attractors . . . . .	91
3.4.2	$n$ -Scroll hypercube attractors . . . . .	92
3.5	Scroll maps from $n$ -scroll attractors . . . . .	94
3.5.1	1-Scroll and 2-scroll maps . . . . .	95
3.5.2	Circuit realization of a 1-scroll map . . . . .	98
3.6	Lur'e representations . . . . .	100
3.7	Conclusion . . . . .	104
4.	Synchronization of Chaotic Lur'e Systems . . . . .	105
4.1	Synchronization . . . . .	105
4.2	Master-slave synchronization: autonomous case . . . . .	109
4.2.1	Full static state error feedback . . . . .	109

4.2.2	Dynamic output feedback . . . . .	111
4.3	Robust synchronization . . . . .	113
4.3.1	Full static state error feedback . . . . .	114
4.3.2	Dynamic output feedback . . . . .	116
4.4	Time-delay synchronization scheme . . . . .	118
4.4.1	Error system for the time-delay synchronization scheme	119
4.4.2	Delay-dependent synchronization criterion . . . . .	121
4.4.3	Full static state feedback together with time delay . . . . .	124
4.5	Nonlinear $H_\infty$ synchronization: non-autonomous case . . . . .	125
4.5.1	Full static state error feedback . . . . .	125
4.5.2	Dynamic output feedback . . . . .	129
4.6	Robust nonlinear $H_\infty$ synchronization . . . . .	131
4.6.1	Full static state error feedback . . . . .	131
4.6.2	Dynamic output feedback . . . . .	134
4.7	Impulsive synchronization . . . . .	135
4.7.1	State feedback case . . . . .	136
4.7.2	Measurement feedback case . . . . .	137
4.8	Controller design . . . . .	138
4.8.1	Master-slave synchronization . . . . .	139
4.8.2	Robust synchronization . . . . .	140
4.8.3	Synchronization with time-delay . . . . .	140
4.8.4	Nonlinear $H_\infty$ synchronization . . . . .	141
4.8.5	Robust nonlinear $H_\infty$ synchronization . . . . .	141
4.9	Examples . . . . .	142
4.9.1	Master-slave synchronization of two unidirectionally coupled Chua's circuits . . . . .	142
4.9.2	Experimental confirmation of time-delay synchroniza- tion scheme . . . . .	145
4.9.3	Experimental confirmation of nonlinear $H_\infty$ synchro- nization for Chua's circuit and 5-scroll attractors . . . . .	149
4.10	Conclusion . . . . .	154
5.	Engineering Applications . . . . .	155
5.1	Chaos in communications . . . . .	155
5.1.1	Modulation and demodulation based on chaos . . . . .	156
5.1.1.1	Static modulation methods . . . . .	157
5.1.1.2	Dynamic modulation methods . . . . .	157
5.1.2	The role of new synchronization schemes . . . . .	159
5.2	Chaotic systems in optimization . . . . .	160

5.2.1	Chaotic annealing . . . . .	162
5.2.2	Coupled chaotic annealing . . . . .	162
5.2.3	Illustrative examples . . . . .	164
5.3	Random number generators and cryptography . . . . .	166
5.3.1	TRNG from a double scroll attractor . . . . .	168
5.3.1.1	Bit generation . . . . .	170
5.3.1.2	De-skewing and setting the threshold . . . . .	173
5.3.1.3	Statistical tests . . . . .	175
5.3.2	Binary pseudorandom pattern generation on CNN-UM . . . . .	178
5.3.2.1	PPGs from 1-D rules . . . . .	180
5.3.2.2	PPGs from 2-D rules . . . . .	182
5.3.2.3	Experimental results on the CNN-UM chip . . . . .	182
5.3.2.4	A general comparison . . . . .	184
5.4	Image/Video authentication on CNN-UM . . . . .	186
5.4.1	Fragile watermarking . . . . .	187
5.4.2	Fragile watermarking on the CNN-UM for image authentication . . . . .	189
5.4.3	Fragile watermarking on the CNN-UM for video authentication . . . . .	190
5.4.4	Experimental results on the CNN-UM chip . . . . .	190
5.5	CNN template tuning . . . . .	194
5.5.1	Erroneous chip behavior and template robustness . . . . .	194
5.5.2	Experiments . . . . .	196
5.6	Conclusions . . . . .	198
6.	General Conclusions and Future Work . . . . .	201
	<i>Bibliography</i> . . . . .	203
	<i>Notation</i> . . . . .	225
	<i>Index</i> . . . . .	229
