<i>Preface</i>	vii
<i>Conventions</i>	xxi
I Background	1
1. Polynomial Systems	3
1.1 Polynomials in One Variable	3
1.2 Multivariate Polynomial Systems	5
1.3 Trigonometric Equations as Polynomials	7
1.4 Solution Sets	8
1.5 Solution by Continuation	9
1.6 Overview	10
1.7 Exercises	11
2. Homotopy Continuation	15
2.1 Continuation for Polynomials in One Variable	15
2.2 Complex Versus Real Solutions	18
2.3 Path Tracking	20
2.4 Exercises	24
3. Projective Spaces	27
3.1 Motivation: Quadratic Equations	27
3.2 Definition of Projective Space	29
3.3 The Projective Line \mathbb{P}^1	30
3.4 The Projective Plane \mathbb{P}^2	32
3.5 Projective Algebraic Sets	34
3.6 Multiprojective Space	35

3.7	Tracking Solutions to Infinity	36
3.8	Exercises	39
4.	Genericity and Probability One	43
4.1	Generic Points	44
4.2	Example: Generic Lines	46
4.3	Probabilistic Null Test	48
4.4	Algebraic Probability One	50
4.5	Numerical Certainty	51
4.6	Other Approaches to Genericity	52
4.7	Final Remarks	53
4.8	Exercises	53
5.	Polynomials of One Variable	55
5.1	Algebraic Facts for One Variable Polynomials	55
5.2	Analytic Facts for One Variable Polynomials	58
5.3	Some Numerical Aspects of Polynomials of One Variable	61
5.4	Exercises	65
6.	Other Methods	67
6.1	Exclusion Methods	68
6.2	Elimination Methods	72
6.2.1	Resultants	73
6.2.1.1	Hidden Variable Resultants	73
6.2.1.2	u-Resultants	76
6.2.2	Numerically Confirmed Eliminants	76
6.2.3	Dixon Determinants	77
6.2.4	Heuristic Eliminants	79
6.3	Gröbner Methods	81
6.3.1	Definitions	81
6.3.2	From Gröbner Bases to Eigenvalues	83
6.4	More Methods	84
6.5	Floating Point vs. Exact Arithmetic	84
6.6	Discussion	85
6.7	Exercises	86
II	Isolated Solutions	89
7.	Coefficient-Parameter Homotopy	91
7.1	Coefficient-Parameter Theory	92
7.2	Parameter Homotopy in Application	98

7.3	An Illustrative Example: Triangles	99
7.4	Nested Parameter Homotopies	101
7.5	Side Conditions	102
7.6	Homotopies that Respect Symmetry Groups	103
7.7	Case Study: Stewart-Gough Platforms	104
7.7.1	General Case	106
7.7.2	Platforms with Coincident Joints	108
7.7.3	Planar Platforms	110
7.7.4	Summary of Case Study	110
7.8	Historical Note: The Cheater's Homotopy	111
7.9	Exercises	112
8.	Polynomial Structures	117
8.1	A Hierarchy of Structures	118
8.2	Notation	120
8.3	Homotopy Paths for Linearly Parameterized Families	120
8.4	Product Homotopies	122
8.4.1	Total Degree Homotopies	122
8.4.2	Multihomogeneous Homotopies	126
8.4.3	Linear Product Homotopies	130
8.4.4	Monomial Product Homotopies	133
8.4.5	Polynomial Product Homotopies	134
8.5	Polytope Structures	138
8.5.1	Newton Polytopes and Mixed Volume	138
8.5.2	Bernstein's Theorem	139
8.5.3	Computing Mixed Volumes	140
8.5.4	Polyhedral Homotopies	143
8.5.5	Example	144
8.6	A Summarizing Example	146
8.7	Exercises	147
9.	Case Studies	149
9.1	Nash Equilibria	149
9.2	Chemical Equilibrium	152
9.3	Stewart-Gough Forward Kinematics	154
9.4	Six-Revolute Serial-Link Robots	156
9.5	Planar Seven-Bar Structures	159
9.5.1	Isotropic Coordinates	160
9.5.2	Seven-Bar Equations	160
9.6	Four-Bar Linkage Design	161
9.6.1	Four-Bar Synthesis	162
9.6.2	Four-Bar Equations	163

9.6.3	Four-Bar Analysis	164
9.6.4	Function Generation	164
9.6.5	Body Guidance	165
9.6.6	Five-Point Path Synthesis	166
9.6.7	Nine-Point Path Synthesis	167
9.6.8	Four-Bar Summary	169
9.7	Exercises	170
10.	Endpoint Estimation	177
10.1	Nonsingular Endpoints	178
10.2	Singular Endpoints	179
10.2.1	Basic Setup	179
10.2.2	Fractional Power Series and Winding Numbers	180
10.3	Singular Endgames	181
10.3.1	Endgame Operating Zone	182
10.3.2	Simple Prediction	183
10.3.3	Power-Series Method	183
10.3.4	Cauchy Integral Method	186
10.3.5	The Clustering or Trace Method	187
10.4	Losing the Endgame	188
10.5	Deflation of Isolated Singularities	190
10.5.1	Polynomials in One Variable	191
10.5.2	More than One Variable	192
10.6	Exercises	194
11.	Checking Results and Other Implementation Tips	197
11.1	Checks	197
11.1.1	Endpoint Quality Measures	197
11.1.2	Global Checks	199
11.2	Corrective Actions	200
11.2.1	Adaptive Re-Runs	201
11.2.2	Verified Path Tracking	201
11.2.3	Multiple Precision	201
11.3	Exercises	202

III Positive Dimensional Solutions 205

12.	Basic Algebraic Geometry	207
12.1	Affine Algebraic Sets	209
12.1.1	The Zariski Topology and the Complex Topology	211
12.1.2	Proper Maps	212

12.1.3	Linear Projections	212
12.2	The Irreducible Decomposition for Affine Algebraic Sets	215
12.2.1	The Dimension of an Algebraic Set	216
12.3	Further Remarks on Projective Algebraic Sets	217
12.4	Quasiprojective Algebraic Sets	219
12.5	Constructible Algebraic Sets	220
12.6	Multiplicity	223
12.7	Exercises	225
13.	Basic Numerical Algebraic Geometry	227
13.1	Introduction to Witness Sets	229
13.2	Linear Slicing	231
13.2.1	Extrinsic and Intrinsic Slicing	234
13.3	Witness Sets	235
13.3.1	Witness Sets for Reduced Components	236
13.3.2	Witness Sets for Deflated Components	237
13.3.3	Witness Sets for Nonreduced Components	238
13.4	Rank of a Polynomial System	239
13.5	Randomization and Nonsquare Systems	241
13.6	Witness Supersets	244
13.6.1	Examples	247
13.7	Probabilistic Algorithms About Algebraic Sets	249
13.7.1	An Algorithm for the Dimension of an Algebraic Set	250
13.7.2	An Algorithm for the Dimension of an Algebraic Set at a Point	250
13.7.3	An Algorithm for Deciding Inclusion and Equality of Reduced Algebraic Sets	252
13.8	Summary	253
13.9	Exercises	253
14.	A Cascade Algorithm for Witness Supersets	255
14.1	The Cascade Algorithm	256
14.2	Examples	261
14.3	Exercises	262
15.	The Numerical Irreducible Decomposition	265
15.1	Membership Tests and the Numerical Irreducible Decomposition	267
15.2	Sampling a Component	272
15.2.1	Sampling a Reduced Component	272
15.2.2	Sampling a Deflated Component	273
15.2.3	Witness Sets in the Nonreduced Case	273
15.3	Numerical Elimination Theory	274
15.4	Homotopy Membership and Monodromy	275

15.4.1	Monodromy	276
15.4.2	Completeness of Monodromy	277
15.5	The Trace Test	279
15.5.1	Traces of Functions	280
15.5.2	The Simplest Traces	280
15.5.3	Traces in the Parameterized Situation	281
15.5.4	Writing Down Defining Equations: An Example	282
15.5.5	Linear Traces	283
15.6	Singular Path Tracking	284
15.7	Exercises	288
16.	The Intersection Of Algebraic Sets	289
16.1	Intersection of Irreducible Algebraic Sets	290
16.2	Equation-by-Equation Solution of Polynomial Systems	292
16.2.1	An Example	293
16.3	Exercises	294
Appendices		297
Appendix A	Algebraic Geometry	299
A.1	Holomorphic Functions and Complex Analytic Spaces	300
A.2	Some Further Results on Holomorphic Functions	302
A.2.1	Manifold Points and Singular Points	306
A.2.2	Normal Spaces	308
A.3	Germs of Complex Analytic Sets	308
A.4	Useful Results About Algebraic and Complex Analytic Sets	310
A.4.1	Generic Factorization	316
A.5	Rational Mappings	317
A.6	The Rank and the Projective Rank of an Algebraic System	318
A.7	Universal Functions and Systems	320
A.7.1	One Variable Polynomials	321
A.7.2	Polynomials of Several Variables	322
A.7.3	A More General Case	322
A.7.4	Universal Systems	323
A.8	Linear Projections	324
A.8.1	Grassmannians	325
A.8.2	Linear Projections on \mathbb{P}^N	327
A.8.3	Further Results on System Ranks	329
A.8.4	Some Genericity Properties	330
A.9	Bertini's Theorem and Some Consequences	331
A.10	Some Useful Embeddings	334

A.10.1	Veronese Embeddings	334
A.10.2	The Segre Embedding	334
A.10.3	The Secant Variety	335
A.10.4	Some Genericity Results	336
A.11	The Dual Variety	337
A.12	A Monodromy Result	339
A.13	Line Bundles and Vector Bundles	341
A.13.1	Bihomogeneity and Multihomogeneity	341
A.13.2	Line Bundles and Their Sections	341
A.13.3	Some Remarks on Vector Bundles	343
A.13.4	Detecting Positive-Dimensional Components	343
A.14	Generic Behavior of Solutions of Polynomial Systems	344
A.14.1	Generic Behavior of Solutions	347
A.14.2	Analytic Parameter Spaces	349
Appendix B	Software for Polynomial Continuation	353
Appendix C	HomLab User’s Guide	355
C.1	Preliminaries	356
C.1.1	“As is” Clause	356
C.1.2	License Fee	356
C.1.3	Citation and Attribution	356
C.1.4	Compatibility and Modifications	356
C.1.5	Installation	357
C.1.6	About Scripts	358
C.2	Overview of HOMLAB	358
C.3	Defining the System to Solve	360
C.3.1	Fully-Expanded Polynomials	360
C.3.2	Straight-Line Functions	362
C.3.3	Homogenization	364
C.3.4	Function Utilities and Checking	365
C.4	Linear Product Homotopies	366
C.5	Parameter Homotopies	369
C.5.1	Initializing Parameter Homotopies	370
C.6	Defining a Homotopy Function	371
C.6.1	Defining a Parameter Path	371
C.6.2	Homotopy Checking	372
C.7	The Workhorse: Endgamer	372
C.7.1	Control Settings	373
C.7.2	Verbose Mode	375
C.7.3	Path Statistics	375
C.8	Solutions at Infinity and Dehomogenization	376
