<i>Foreword</i>	v
<i>Preface</i>	xiii
<i>Introduction</i>	xxi
1. Relation Between Spectral and Oscillatory Properties for the Matrix Sturm–Liouville Problem	1
1.1 Problem on a Finite Interval	1
1.2 Problem on the Half-Line	16
1.3 Bibliographical Comments	24
1.3.1 An Example of the Operator of (1.1)–(1.3) Type with the Purely Absolutely Continuous Spectrum	27
1.3.2 Oscillatory Theory of Partial Differential Equations .	29
1.3.3 Bochner Integral	33
2. Fundamental System of Solutions for an Operator Differential Equation with a Singular Boundary Condition	35
2.1 Separated Self-Adjoint Boundary Conditions	35
2.2 A Construction for the Fundamental Solution of the Boundary-Value Problem	39
2.3 Self-Consistency of the Fundamental Solution of the Self-Adjoint Problem and the Evolution of the Corresponding Hermitian Relation (or Lagrangian Plane in $H \oplus H$)	48
2.4 A Different Construction for the Fundamental Solution of the Boundary-Value Problem	58

2.5	Bibliographical Comments	69
3.	Dependence of the Spectrum of Operator Boundary Problems on Variations of a Finite or Semi-Infinite Interval	71
3.1	Dependence of Eigenvalues and the Greatest Lower Bound of the Spectrum for a Semi-Bounded Below Differential Operator on Variations of the Interval	71
3.2	Continuity and Monotonicity of the Greatest Lower Bound of the Essential Spectrum for Semi-Bounded Below Differential Operators	76
3.3	Bibliographical Comments	84
4.	Relation Between Spectral and Oscillatory Properties for Operator Differential Equations of Arbitrary Order	89
4.1	Oscillatory Theorem for Operator Differential Equations of Even Order	89
4.2	Comparison and Alternation Theorems	95
4.3	Multiplicative Representation of Positive Differential Operators and Its Applications	99
4.4	Discrete Levels in the Gaps of the Essential Spectrum	107
4.5	Bibliographical Comments	113
4.5.1	Symplectic Interpretation of Sturm-Type Theorems and Their Operator-Theoretical Proofs	114
5.	Self-Adjoint Extensions of Systems of Differential Equations of Arbitrary Order on an Infinite Interval in the Absolutely Indefinite Case	125
5.1	A Description of Self-Adjoint Extensions of Differential Operators of Arbitrary Order with Operator-Valued Coefficients on an Infinite Interval	125
5.2	Parametrization of the Characteristic Operator Function	135
5.3	Bibliographical Comments	140
5.3.1	Everitt-Zettl Problem, Brusentsev's Example and Two Open Questions	141
5.3.2	On the Deficiency Indices of Scalar Symmetric Differential Operators of General Kind on the Half-Axis (Solved and Unsolved Questions)	143

5.3.3	Kogan–Rofe-Beketov’s Asymptotic Theorems and Deficiency Indices of Symmetric Differential Operators	147
5.3.4	R. C. Gilbert’s Class of Formally Self-Adjoint Ordinary Differential Operators Whose Deficiency Numbers Differ by an Arbitrary Pre-Assigned Positive Integer	156
5.3.5	Deficiency Indices of Symmetric Differential Systems of the First and Arbitrary Orders and Some Open Questions	159
5.3.6	Some Comments on Hilbert’s 21-st Problem and Bolibrukh Counterexample	168
5.3.7	Some Comments on Section 5.2	174
5.3.8	Characteristic Properties of Weyl Solutions for the Sturm–Liouville and Dirac Equations. V. A. Marchenko’s Theorems	175
6.	Discrete Levels in Spectral Gaps of Perturbed Schrödinger and Hill Operators	183
6.1	Factorized Phase Matrix of the Perturbed System and the Discrete Spectrum in Gaps of the Continuous Spectrum	183
6.2	Generalization of D’Alembert–Liouville–Ostrogradsky Formula and Its Application to Growth Estimates for Solutions of Canonical Almost Periodic Systems	192
6.3	A Reduction of the Problem about the Number of Discrete Levels in a Finite Spectral Gap of One-Dimensional Schrödinger Operator to a Similar Problem for a Semi-Infinite Gap of the Transformed Schrödinger Operator	204
6.4	Applications to Perturbations of Hill Operators and Schrödinger Operators with an Almost Periodic Potential. Kneser-Type Constants and Effective Masses	208
6.5	Discrete Levels in Spectral Gaps of Perturbed Hill Operators	223
6.6	Bibliographical Comments	232
6.6.1	Some Comments on Section 6.1	232
6.6.2	Some Comments on Section 6.2	233
6.6.3	Some Comments on Section 6.3 and Differential Inequalities	234

6.6.4	The Spectrum of Self-Adjoint Periodic and Almost Periodic Operators. Marchenko–Ostrovskiy and Pastur–Tkachenko Theorems.	235
6.6.5	The Spectrum of Non-Self-Adjoint Operators. Batchenko–Gesztesy and Rofe-Beketov Theorems	249
6.6.6	The Spectrum of Perturbed Self-Adjoint and Non-Self-Adjoint Operators	266
6.6.7	Matrix Operators or Differential-Algebraic Operators and Related Topics	272
6.6.8	The Inverse Sturm–Liouville Problem for the Spectral Matrix on the Whole Axis	275
6.6.9	Three Open Questions	281
Appendix A Self-Adjoint Extensions of Differential Operators on a Finite Interval in Spaces of Vector-Functions		287
A.1	Hermitian Relations	288
A.1.1	Canonical Form of Hermitian Relations	288
A.1.2	Various Forms of Hermitian Relations. Dissipative and Sectorial Relations	292
A.2	Self-Adjoint Boundary Conditions for Infinite Systems of Second Order Differential Equations	305
A.3	Self-Adjoint Extensions of Differential Operators of Arbitrary Order with Operator Coefficients	311
A.3.1	The Expressions of Order $2n$	311
A.3.2	The Expressions of Order $2n - 1$	314
A.3.3	Continuous Dependence of Initial Data on Solutions of Differential Equations	327
A.4	Bibliographical Comments	330
A.4.1	M. L. Gorbachuk Theory of Generalized Boundary Values. Abstract Boundary Conditions	332
A.4.2	Strong Resolvent Convergence of Hermitian Relations and Operators with Non-Dense Domains and Resolution of the Identity. Stability of Eigenvalues	341
A.4.3	Characteristic Operator and Boundary-Value Problems with Separated Boundary Conditions	354

<i>Bibliography</i>	359
<i>List of Symbols</i>	431
<i>Index</i>	433
