

CONTENTS

Preface	vii
Introduction	xv
Glossary	xxi
1. Stochastic Variables and Stochastic Processes	1
1.1. Probability Theory	1
1.2. Averages	4
1.3. Stochastic Processes, the Kolmogorov Criterion and Martingales	9
1.4. The Gaussian Distribution and Limit Theorems	14
1.4.1. The central limit theorem	16
1.4.2. The law of the iterated logarithm	17
1.5. Transformation of Stochastic Variables	17
1.6. The Markov Property	19
1.6.1. Stationary Markov processes	20
1.7. The Brownian Motion	21
1.8. Stochastic Integrals	28
1.9. The Ito Formula	38
1.9. The Ito Formula	38
Appendix	45
Exercises	49
2. Stochastic Differential Equations	55
2.1. One-Dimensional Equations	56
2.1.1. Growth of populations	56
2.1.2. Stratonovich equations	58

2.1.3. The problem of Ornstein–Uhlenbeck and the Maxwell distribution	59
2.1.4. The reduction method	63
2.1.5. Verification of solutions	65
2.2. White and Colored Noise, Spectra	67
2.3. The Stochastic Pendulum	70
2.3.1. Stochastic excitation	72
2.3.2. Stochastic damping ($\beta = \gamma = 0; \alpha \neq 0$)	73
2.4. The General Linear SDE	76
2.5. A Class of Nonlinear SDE	79
2.6. Existence and Uniqueness of Solutions	84
Exercises	87
3. The Fokker–Planck Equation	91
3.1. The Master Equation	91
3.2. The Derivation of the Fokker–Planck Equation	95
3.3. The Relation Between the Fokker–Planck Equation and Ordinary SDE’s	98
3.4. Solutions to the Fokker–Planck Equation	104
3.5. Lyapunov Exponents and Stability	107
3.6. Stochastic Bifurcations	110
3.6.1. First order SDE’s	110
3.6.2. Higher order SDE’s	112
Appendix A. Small Noise Intensities and the Influence of Randomness Limit Cycles	117
Appendix B.1 The method of Lyapunov functions	124
Appendix B.2 The method of linearization	128
Exercises	130
4. Advanced Topics	135
4.1. Stochastic Partial Differential Equations	135
4.2. Stochastic Boundary and Initial Conditions	141
4.2.1. A deterministic one-dimensional wave equation	141
4.2.2. Stochastic initial conditions	144
4.3. Stochastic Eigenvalue Equations	147
4.3.1. Introduction	147
4.3.2. Mathematical methods	148

4.3.3. Examples of exactly soluble problems	152
4.3.4. Probability laws and moments of the eigenvalues	156
4.4. Stochastic Economics	160
4.4.1. Introduction	160
4.4.2. The Black–Scholes market	162
Exercises	164
5. Numerical Solutions of Ordinary Stochastic Differential Equations	167
5.1. Random Numbers Generators and Applications	167
5.1.1. Testing of random numbers	168
5.2. The Convergence of Stochastic Sequences	173
5.3. The Monte Carlo Integration	175
5.4. The Brownian Motion and Simple Algorithms for SDE's	179
5.5. The Ito–Taylor Expansion of the Solution of a 1D SDE	181
5.6. Modified 1D Milstein Schemes	187
5.7. The Ito–Taylor Expansion for N-dimensional SDE's	189
5.8. Higher Order Approximations	193
5.9. Strong and Weak Approximations and the Order of the Approximation	196
Exercises	201
References	205
Fortran Programs	211
Index	213
