

CONTENTS

<i>Preface</i>	v
1 Competing Risk Modeling in Reliability	1
<i>Tim Bedford</i>	
1.1 Introduction	1
1.2 Independent and Dependent Competing Risks	3
1.3 Characterization of Possible Marginals	5
1.4 Kolmogorov-Smirnov Test	7
1.5 Conservatism of Independence	8
1.6 The Bias of Independence	9
1.7 Maintenance as a Censoring Mechanism	10
1.7.1 Dependent copula model	11
1.7.2 Random clipping	11
1.7.3 Random signs	12
1.7.4 LBL model	12
1.7.5 Mixed exponential model	13
1.7.6 Delay time model	13
1.8 Loosening the Renewal Assumption	13
1.9 Conclusion	15
References	15
2 Game-Theoretic and Reliability Methods in Counter-Terrorism and Security	17
<i>Vicki Bier</i>	
2.1 Introduction	17
2.2 Applications of Reliability Analysis to Security	18
2.3 Applications of Game Theory to Security	19

2.3.1	Security as a game between defenders	21
2.4	Combining Reliability Analysis and Game Theory	23
2.5	Directions for Future Work	24
2.6	Conclusion	25
	Acknowledgments	25
	References	26
3	Regression Models for Reliability Given the Usage Accumulation History	29
	<i>Thierry Duchesne</i>	
3.1	Introduction	29
3.1.1	Definitions and notation	30
3.1.2	Common lifetime regression models	31
3.2	Other Approaches to Regression Model Building	32
3.2.1	Models based on transfer functionals	33
3.2.2	Models based on internal wear	34
3.3	Collapsible Models	36
3.3.1	Two-dimensional prediction problems	36
3.4	Discussion	38
	Acknowledgments	38
	References	38
4	Bayesian Methods for Assessing System Reliability: Models and Computation	41
	<i>Todd Graves and Michael Hamada</i>	
4.1	Challenges in Modern Reliability Analyses	42
4.2	Three Important Examples	42
4.2.1	Example 1: Reliability of a component based on biased sampling	43
4.2.2	Example 2: System reliability based on partially informative tests	44
4.2.3	Example 3: Integrated system reliability based on diverse data	45
4.3	YADAS: a Statistical Modeling Environment	46
4.3.1	Expressing arbitrary models	46
4.3.2	Special algorithms	48
4.3.3	Interfaces, present and future	48
4.4	Examples Revisited	49

4.4.1	Example 1	49
4.4.2	Example 2	49
4.4.3	Example 3	50
4.5	Discussion	51
	References	54
5	Dynamic Modeling in Reliability and Survival Analysis	55
	<i>Edsel A. Peña and Elizabeth H. Slate</i>	
5.1	Introduction	55
5.2	Dynamic Models	59
5.2.1	A dynamic reliability model	60
5.2.2	A dynamic recurrent event model	61
5.3	Some Probabilistic Properties	63
5.4	Inference Methods	64
5.4.1	Dynamic load-sharing model	64
5.4.2	Dynamic recurrent event model	65
5.5	An Application	68
	References	70
6	End of Life Analysis	73
	<i>H. Wynn, T. Figarella, A. Di Bucchianico, M. Jansen, W. Bergsma</i>	
6.1	The Urgency of WEEE	74
6.1.1	The effect on reliability	74
6.1.2	The implications for design	75
6.2	Signature Analysis and Hierarchical Modeling	75
6.2.1	The importance of function	76
6.2.2	Wavelets and feature extraction	76
6.3	A Case Study	76
6.3.1	Function: preliminary FMEA and life tests	77
6.3.2	Stapler motor: time domain	77
6.3.3	Lifting motor: frequency domain	78
6.4	The Development of Protocols and Inversion	79
	Acknowledgments	86
	References	86

7	Reliability Analysis of a Dynamic Phased Mission System: Comparison of Two Approaches	87
	<i>Marc Bouissou, Yves Dutuit, Sidoine Maillard</i>	
7.1	Introduction	87
7.2	Test Case Definition	91
7.3	Test Case Resolution	93
	7.3.1 Resolution with a Petri net	93
	7.3.2 Resolution with a BDMP	96
	7.3.3 Compared results	97
7.4	Conclusions	100
	References	103
8	Sensitivity Analysis of Accelerated Life Tests with Competing Failure Modes	105
	<i>Cornel Bunea and Thomas A. Mazzuchi</i>	
8.1	Introduction	106
8.2	ALT and Competing Risks	107
	8.2.1 ALT and independent competing risks	107
	8.2.2 ALT and dependent competing risks	109
8.3	Graphical Analysis of Motorettes Data	110
8.4	A Copula Dependent ALT - Competing Risk Model	112
	8.4.1 Competing risks and copula	112
	8.4.2 Measures of association	113
	8.4.3 Archimedean copula	114
	8.4.4 Application on motor insulation data	114
8.5	Conclusions	116
	References	117
9	Estimating Mean Cumulative Functions From Truncated Automotive Warranty Data	121
	<i>S. Chukova and J. Robinson</i>	
9.1	Introduction	121
9.2	The Hu and Lawless Model	123
9.3	Extensions of the Model	124
	9.3.1 "Time" is age case	124
	9.3.2 "Time" is miles case	127
9.4	Example	130
	9.4.1 The "P-claims" dataset	130

9.4.2	Examples for the “time” is age case	131
9.4.3	Examples for the “time” is miles case	133
9.5	Discussion	133
	References	134
10	Tests for Some Statistical Hypotheses for Dependent Competing Risks—A Review	137
	<i>Isha Dewan and J. V. Deshpande</i>	
10.1	Introduction	137
10.2	Locally Most Powerful Rank Tests	139
10.3	Tests for Bivariate Symmetry	140
10.4	Censored Data	144
10.5	Simulation Results	145
10.6	Test for Independence of T and δ	147
	10.6.1 Testing H_0 against H'_1	148
	10.6.2 Testing H_0 against H'_2	149
	10.6.3 Testing H_0 against H'_3	150
	Acknowledgments	151
	References	151
11	Repair Efficiency Estimation in the ARI_1 Imperfect Repair Model	153
	<i>Laurent Doyen</i>	
11.1	Introduction	153
11.2	Arithmetic Reduction of Intensity Model with Memory 1	154
	11.2.1 Counting process theory	154
	11.2.2 Imperfect repair models	155
11.3	Failure Process Behavior	156
	11.3.1 Minimal and maximal wear intensities	156
	11.3.2 Asymptotic intensity	157
	11.3.3 Second order term of the asymptotic expanding .	159
11.4	Repair Efficiency Estimation	160
	11.4.1 Maximum likelihood estimators	161
	11.4.2 Explicit estimators	163
11.5	Empirical Results	164
	11.5.1 Finite number of observed failures	164
	11.5.2 Application to real maintenance data set and perspective	165

11.6	Classical Convergence Theorems	166
	References	167
12	On Repairable Components with Continuous Output	169
	<i>M. S. Finkelstein</i>	
12.1	Introduction	169
12.2	Asymptotic Performance of Repairable Components . . .	171
12.3	Simple Systems	173
12.4	Imperfect Repair	174
12.5	Concluding Remarks	175
	References	176
13	Effects of Uncertainties in Components on the Survival of Complex Systems with Given Dependencies	177
	<i>Axel Gandy</i>	
13.1	Introduction	177
13.2	System Reliability with Dependent Components	179
13.3	Bounds on the Margins	181
	13.3.1 Uniform metric	182
	13.3.2 Quantiles	183
	13.3.3 Expectation	184
13.4	Bayesian Approach	186
13.5	Comparisons	188
	References	188
14	Dynamic Management of Systems Undergoing Evolutionary Acquisition	191
	<i>Donald Gaver, Patricia Jacobs, Ernest Seglie</i>	
14.1	Setting	192
	14.1.1 Preamble: broad issues	192
	14.1.2 Testing	194
14.2	Modeling an Evolutionary Step	195
	14.2.1 Model for development of Block $b + 1$	195
	14.2.2 Introduction of design defects during development and testing	196
	14.2.3 Examples of mission success probabilities with random \mathbf{K}_0	197
	14.2.4 Acquisition of Block $b + 1$	198

14.2.5	Obsolescence of Block b and Block $b + 1$	199
14.3	The Decision Problem	199
14.4	Examples	200
14.5	Conclusion and Future Program	203
	References	204
15	Reliability Analysis of Renewable Redundant Systems with Unreliable Monitoring and Switching	205
	<i>Yakov Genis and Igor Ushakov</i>	
15.1	Introduction	205
15.2	Problem Statement	206
15.3	Asymptotic Approach. General System Model	207
15.4	Refined System Model and the FS Criterion	207
15.5	Estimates of Reliability and Maintainability Indexes	209
15.6	Examples	210
15.7	Heuristic Approach. Approximate Method of Analysis of Renewal Duplicate System	214
