

Contents

<i>Preface</i>	vii
1. Newtonian Dynamics	1
1.1 Introducing Probability	1
1.2 Solving Dynamics Problems	13
1.2.1 Initial conditions	14
1.2.2 Solving Liouville equation	20
1.2.2.1 Exact solution	20
1.2.2.2 Numerical solution	21
1.2.2.3 Perturbation solution	22
1.2.3 Analysis of final results	25
2. Simple Systems	27
2.1 Point-Like Density	27
2.2 Free Particle	28
2.3 Constant Force	29
2.4 Oscillator in the External Field	30
2.5 Friction Force	32
2.6 Step Potential	33
3. Central Force	41
4. Angular Momentum	51
4.1 General Remarks	51
4.2 Factorization of Phase Space Density	54
4.3 Internal Rotation	58

4.3.1	Rotating force	58
4.3.2	Electromagnetic force	61
4.4	Spin	63
5.	Special Phase Space Densities	73
5.1	Stationary Phase Space Density	73
5.1.1	Infinite potential well	75
5.1.2	Finite potential well	80
5.2	Discrete Phase Space Densities	85
5.3	Phase Space Density with Constrains	90
5.3.1	Energy constraint	91
5.3.2	Angular momentum constrain	93
6.	Interaction of Two Particles	97
6.1	Forces with Time Delay	97
6.2	Space-Time Unification	103
6.2.1	Uniform motion of source	105
6.2.2	Space-time transformation	108
6.2.3	Dynamics equations	112
7.	Examples of Lorentz Invariant Dynamics	123
7.1	General Remarks	123
7.2	Free Particle	127
7.3	Constant Force	127
7.4	Harmonic Force	128
7.5	Kepler Problem	134
8.	Lorentz Invariant Liouville Equation	141
8.1	General Theory	141
8.2	Free Particle	143
8.3	Scattering on Step Potential	149
8.4	Charge in the Electromagnetic Plane Wave	156
8.5	Scattering by Coulomb Force	161
9.	Non-Uniform Motion	167
9.1	Euclidean Metric	169
9.2	Riemann Metric	176

10. Field and its Source	183
10.1 Delocalized Source	183
10.2 Energy in Field	188
10.3 Field Reaction Force	197
11. Implementation of Uncertainty Principle	207
11.1 Constraint on Phase Space Density	207
11.2 Probability Amplitude	215
11.2.1 General properties	215
11.3 Methods of Solution	228
11.3.1 Exact analytic methods	229
11.3.2 Perturbation methods	232
11.3.3 Numerical methods	235
12. Typical Solutions	239
12.1 Free Particle	239
12.2 Diffraction	242
12.3 Interference	248
12.4 Constant Force	256
12.5 Harmonic Force	259
12.5.1 One dimension	259
12.5.2 Three dimensions	264
12.6 Time Varying Constant Force	269
12.7 Rigid Rotor	273
13. Impulsive Force	281
13.1 Elastic Scattering	281
13.1.1 One dimension	281
13.1.2 Three dimensions	287
14. Inelastic Scattering	307
14.1 Laboratory Coordinate System	307
14.2 Particle-Harmonic Oscillator Collision	314
14.3 Particle-Rigid Rotor Collision	322
14.4 Scattering by Time Dependent Force	330
15. Dynamics in the Electromagnetic Field	337

16. Radiation by Charge	347
16.1 General Theory of Spectrum	347
16.2 Spontaneous Emission	352
16.3 Induced Emission	361
16.3.1 Collision induced emission	362
16.3.2 Time dependent force	366
17. Particle Manifestation of the Electromagnetic Field	377
17.1 Photoelectric Effect	377
17.2 Coincidence Effect	385
17.3 Photon	391
18. Spin	399
18.1 Free Particle	399
18.2 Interaction with the Electromagnetic Field	406
18.3 Lorentz Invariant Dynamics with Spin	409
19. Arbitrary Potential	421
19.1 Step Potential	421
19.2 Generalized Potential	429
Appendix A Random Numbers	435
Appendix B Basics of Differential Geometry	439
Appendix C Spherical Coordinates	459
<i>Bibliography</i>	465
<i>Index</i>	467
