

CONTENTS

Foreword	xi
Preface	xv
Introduction Greenhouse Warming and Nuclear Hazards	1
Three smoking guns prove the falsity of greenhouse warming	3
Nuclear waste disposal, from trash to treasure	19
Cancer death rates of 50 states of U.S. related to natural and nuclear-bomb-test-induced low level radiation	25
Part I Greenhouse Warming	33
An essay on the controversy of greenhouse warming	35
Appendix: A billion year climate history and the evolution of humanity	62
Related research papers on the origin of ice ages	87
— Latent heat of melting and its importance of glaciation cycles	87
— Origin of ice ages: Initial condition forcing and dynamics	95
— Unraveling a century's mystery of the ice ages	111
— The fourth phase of water and the theories of greenhouse effects and ice age glacial cycles	119
Part II Research Papers on Nuclear Hazards	153
The ultimate direct measurement of low level radiation effects	155
Long life expectancy as the beneficial effect of low radiation	175
Low level radiation extends life span by cutting death rates of disease including heart disease, cancer, stroke, etc.	207
Reexamining nuclear energy safety	230
Index	249
