Foreword	v
Preface	vii
List of Figures	xvii
List of Contributors	xxxix
Introduction	1
<i>Dietmar W. Hutmacher and Mary Ng Mah Lee</i>	
To the Faculty: How to Use this Work	2
To the Student: How to Use this Work	3
Introduction	4
Light	5
Confocal Laser Microscopy	5
SEM/TEM	6
Atomic Force Microscopy (AFM)	7
X-ray Microscopy	8
Microcomputed Tomography (microCT)	8
A Light Microscopy	9
<i>Gavin S. Dawe, Jan-Thorsten Schantz, Mortimer Abramowitz, Michael W. Davidson and Dietmar W. Hutmacher</i>	
A.1 Introduction	10
A.2 Instrumentation	11

A.2.1	Choosing a Microscope	11
A.2.2	Light Sources	12
A.2.3	Condensers and Köhler Illumination	15
A.2.4	Objectives	22
A.2.5	Eyepieces (Oculars)	34
A.3	Optical Contrast Enhancement Techniques	37
A.3.1	Darkfield Microscopy	38
A.3.2	Phase Contrast	43
A.3.3	Differential Interference Contrast (DIC)	47
A.3.4	Hoffman Modulation Contrast	48
A.3.5	Variable Relief (VAREL) Contrast	51
References		52
Notes		54
B	Confocal and Fluorescence Microscopy	57
	<i>Connie Er</i>	
B.1	What is Fluorescence?	58
B.1.1	Fluorescence Probes	61
B.1.2	Autofluorescence	66
B.2	Fluorescence Microscope	68
B.3	Confocal Laser Scanning Microscope	69
B.3.1	Confocal Principles	71
B.3.2	Modes of Imaging	75
B.4	Reagents for Staining	87
B.4.1	Phosphate Buffered Saline	87
B.4.2	Fixatives	88
B.4.3	Permeabilisation Solvent	88
B.4.4	Blocking Buffer	88
B.4.5	Mounting Media for Fixed Samples	89
B.5	Basic Protocols	89
B.5.1	DNA Binding Dyes — DAPI	90
B.5.2	Viability Dyes — FDA + PI	90
B.5.3	Organelle Dyes — MitoTracker	91
B.5.4	Antibody Labelling — For Microtubules	
	Staining	92
B.5.5	Fixed eGFP Sample	93
B.6	General Considerations	93
B.6.1	Probes & Specimens Preparation	93
B.6.2	Imaging	94

B.7	Information Sources	96
B.7.1	Confocal Microscopy Sites	96
B.7.2	Courses	98
B.7.3	Fluorochrome Data Table	99
B.7.4	Recommendation References	99
B.7.5	Related Suppliers	100
	Notes	104
C	Scanning Electron Microscopy	107
	<i>Mary Ng Mah Lee and Patricia A. Netto</i>	
C.1	Introduction	109
C.2	Conventional SEM (CSEM)	110
C.3	Cryo-Scanning Electron Microscopy (CRYO-SEM)	115
C.4	Environmental Scanning Electron Microscopy (ESEM)	118
C.5	Low Vacuum-Scanning Electron Microscopy (LV-SEM)	122
C.6	Sample Preparation (Introduction)	128
C.6.1	Specimen Cleaning	129
C.6.2	Specimen Stabilisation or Fixation	129
C.6.3	Dehydration	130
C.6.4	Specimen Supports	131
C.6.5	Coating and Conductivity Techniques	132
C.6.6	Coating Techniques for X-ray Microanalysis	134
C.6.7	Specimen Damage	136
C.7	General Specimen Preparation Procedures for CSEM	136
C.7.1	Hazards of Critical Point Drying	136
C.7.2	Minimising Artifacts Introduced During Critical Point Drying	137
C.8	New Directions	138
	Acknowledgement	138
	References	138
	Notes	149
D	Transmission Electron Microscopy of Biological Specimens	153
	<i>Terje Dokland and Mary Ng Mah Lee</i>	

D.1	General Considerations	154
D.1.1	Water	155
D.1.2	Radiation Damage	155
D.1.3	Contrast	156
D.1.4	Specimen Thickness	158
D.2	Preparation of Particulate Samples	158
D.2.1	Negative Staining	159
D.2.2	Types of Stains	162
D.2.3	Immuno-negative Staining	163
D.2.4	Shadowing	164
D.2.5	Cryo-EM of Frozen Hydrated Specimens	165
D.3	Preparation of Bulk Samples	176
D.3.1	Fixation	177
D.3.2	Dehydration	179
D.3.3	Embedding	179
D.3.4	Sectioning and Post-staining	181
D.3.5	Cryo Methods for Bulk Samples	181
D.3.6	Freeze Fracture and Freeze Etching	183
D.4	Protocols	184
	References	198
	Notes	209
E	Atomic Force Microscopy	213
	<i>Harald Janovjak, Ravi K. Sawhney, Martin Stark and Daniel J. Müller</i>	
E.1	Introduction	214
E.2	Principles of Atomic Force Microscopy	215
E.2.1	Contrast Generation	215
E.2.2	Imaging Modes of AFM	218
E.2.3	Approach-retract Cycles	220
E.3	Sample Preparation Techniques	222
E.3.1	Prerequisites	222
E.3.2	Sample Surfaces	223
E.3.3	Immobilisation Techniques	225
E.3.4	The Environment and Structure of Biological Specimens	229
E.3.5	Effects of Dehydration	230
E.4	Image Analysis	230
E.4.1	Qualifying Images	230

E.4.2	Quantifying Images	232
E.4.3	Sample Deformation	232
E.5	Imaging of Biological Samples	235
E.5.1	High-resolution Force Microscopy of Single Bio-molecules	235
E.5.2	Imaging Dynamic Bio-molecular Systems	244
E.5.3	Manipulating Biological Samples During AFM Imaging	246
E.5.4	Imaging Cells and Tissues	247
E.6	Force Measurements on Single Molecules and Cells	252
E.6.1	Mechanical Unfolding of Single Water-soluble Proteins	252
E.6.2	Combined Single-molecule Imaging and Force Spectroscopy	255
E.6.3	Probing the Folding of Single Proteins	257
E.6.4	Dynamic Force Spectroscopy of Individual Receptor-ligand Bonds	259
E.6.5	Dynamic Properties of Single Bio-molecules	262
E.6.6	Cell Adhesion Measurements	262

F	X-ray Based Microscopy	285

Jan-Thorsten Schantz

F.1	Introduction — X-ray Technologies in Biomedical Sciences	286
F.2	Principles of X-rays and X-ray Fluorescence	288
F.2.1	X-rays	288
F.2.2	X-ray Fluorescence	289
F.3	Development and Basic Principle of the X-ray Analytical Microscopy	290
F.3.1	Technology — Development of XGT-2000	290
F.3.2	Description of Machine	293
F.3.3	Analysis Techniques	297

F.4	Application in Bioengineering and Medicine — Case Studies	299
F.4.1	Analysis of Cell-Polymerimplants	299
F.4.2	Analysis on a Reconstructed Rabbit Calvarium Using Tissue Engineered Bone Grafts	300
F.5	Comparison with Other X-ray Microscopy Techniques	303
F.5.1	Electron Probe Microanalysis	303
F.6	Limitations and Further Development of X-ray Microscopy Techniques	304
F.6.1	Drawbacks and Improvements	304
	Acknowledgements	307
	References	307
	Abbreviations	310
	Notes	311
G	Micro Computed Tomography in the Biomedical Sciences	315
	<i>Ho Saey Tuan, Craig L. Duvall, Robert E. Guldberg and Dietmar W. Hutmacher</i>	
G.1	Introduction	316
G.2	Advantages of Micro CT	317
G.3	The Historic Development of Micro CT	318
G.4	Components of a Micro CT	319
G.4.1	X-ray Source	321
G.4.2	Beam Geometry	321
G.4.3	Detector Array	322
G.5	Basic Principles and Data Processing	323
G.6	Micro CT Setups	326
G.7	Micro CT Applications: Trabecular Bone Studies	328
G.8	Micro CT Applications: Imaging Vasculature and Soft Tissues	332
G.8.1	Contrast Agents	332
G.8.2	Vascular Imaging	333
G.8.3	Soft Tissue Imaging	333
G.8.4	Other Imaging Techniques	335

G.8.5	Procedure for Preparing Mouse Models for MicroCT Evaluation of Vasculature	335
G.8.5.1	Reagents	335
G.8.5.2	Solutions	336
G.8.5.3	Materials	336
G.8.5.4	Procedure	336
G.9	Micro CT Applications: Scaffold Characterisation	338
G.10	Micro CT Applications: Tissue Engineering	339
G.11	Micro CT Applications: Finite Element Modelling	341
G.12	Limitations of Micro CT	342
G.12.1	Beam Hardening Artifacts	343
G.12.2	Blurring Artifacts	344
G.12.3	Motion Artifacts	344
G.12.4	Streak Artifacts	344
G.12.5	Stair Step Artifacts	345
G.12.6	Ring Artifacts	345
G.13	Future Improvements	345
G.13.1	K-edge Subtraction	345
G.13.2	X-ray Phase Delay	346
G.13.3	X-ray Fluorescence	346
G.13.4	X-ray Scatter	346
