Preface	v
How this book is organized	viii
I Mathematical Methods	1
1 Vectors and Vector Calculus	2
1.1 Vectors and Vector Spaces	2
1.1.1 Vectors	2
1.1.2 Basis Vectors and Components of a Vector	6
1.1.3 Three-Dimensional Cartesian Coordinate System and \mathbb{R}^3	10
1.1.4 Scalar Product	12
1.1.5 Rotation of Vectors	18
1.1.6 Vector Product	20
1.1.7 Triple Products	24
1.2 Vector Calculus	30
1.2.1 Vector Calculus: Gradient	30
1.2.2 Geometrical Interpretation of a Gradient.	31
1.2.3 Vector Calculus: Divergence	35
1.2.4 Vector Calculus: Curl	37
1.2.5 Vector Calculus: Successive Applications of the Gradient Operator	39
1.3 Curvilinear Coordinates	45
1.4 Integral Theorems of Vector Calculus	66
1.4.1 Vector Calculus: Line Integral	66
1.4.2 Vector Calculus: Surface Integral	69
1.4.3 Vector Calculus: Divergence Theorem	73
1.4.4 Vector Calculus: Gauss' Law	77
1.4.5 Vector Calculus: Stokes's Theorem	80
1.4.6 Conservative Force and Potential Theory	86
Helmholtz theorem	91

2	Matrices and Rotations	99
2.1	Matrices: Basic Facts	99
2.1.1	The Vector Space of the Column Vectors. The Inner Product.	103
2.1.2	Writing Vectors in terms of an Orthonormal Basis	106
2.1.3	Change of the Coordinate System. The Rotation Matrix	108
2.1.4	Determinant and Matrix Inversion	114
2.1.5	Rank of a Matrix	125
2.2	The Eigenvalue Problem	129
2.2.1	Some Applications of the Eigenvalue Problem, Diagonalization	135
2.2.2	Orthogonal and Unitary Matrices	139
2.2.3	Hermitian and Symmetric Matrices	143
2.3	Rotation Transformations and Special Orthogonal Matrices	154
2.4	Group Theory and Rotations	166
2.4.1	SO(3) Group	167
2.4.2	The Infinitesimal Rotations	172
2.4.3	SU(2) Group	177
3	Differential Equations	185
3.1	First Order Differential Equations	185
3.1.1	Separable Equations	186
3.1.2	Exact First Order Differential Equations	187
3.1.3	Linear First Order Differential Equations	190
3.2	Second-Order Differential Equations	196
3.2.1	Second Order Homogeneous Linear Differential Equation with Constant Coefficients	196
3.2.2	Wronskian Representation of the Second-order Differential Equation	205
3.2.3	Reduction of Order or How to Obtain a Missing Second Solution	207
3.2.4	The Non-Homogeneous Equations	208
3.2.5	Method of Undetermined Coefficients	210
3.2.6	General Method for Particular Solutions.	211
3.2.7	Complex Method for the Exponential Source Term	214
3.2.8	Complex Method for the Forced Oscillations	215
3.2.9	Complex Method for Electric Circuits	221
4	Series Solutions of Differential Equations	227
4.1	Introduction to the Power Series Method	227
4.1.1	Power Series Method, a Warm up Example	232
4.2	Power Series Method, Expansion around a Regular Point	234
4.2.1	Legendre's Differential Equation	235
4.3	Frobenius' Method, Expansion around a Singular Point	245
4.3.1	Bessel's Differential Equation	250

4.3.2	Properties of Bessel Functions	258
4.3.3	Reduction to Bessel's Equation	259
4.4	Method of Separation of Variables; Helmholtz's and Laplace's Equations	266
4.4.1	Separation in Spherical Coordinates	268
4.4.2	Separation in Cylindrical Coordinates	273
5	Special Functions and the Generalized Fourier Series	277
5.1	Sturm-Liouville Theory and the Orthogonal Functions Expansion	277
5.1.1	Introduction, Vibrations of the String	277
5.1.2	The Sturm-Liouville Eigenvalue Problem	280
5.1.3	Fourier-Legendre Series	286
5.1.4	Fourier-Bessel Series	289
5.1.5	Hermite's Equation	292
5.2	Harmonic Oscillator Equation, Periodic Sturm-Liouville Problem and Fourier Series	296
5.2.1	Complex Form of Fourier Series	298
5.2.2	Mean-Square Convergence of Fourier Series	299
5.2.3	Even and Odd Functions	301
5.2.4	Periodic Functions. Point-wise Convergence of Fourier Series	304
5.2.5	Half-Range Expansion	307
5.3	Dirac Delta Function and Fourier Integral Transform	313
5.3.1	Dirac Delta Function	313
5.3.2	Fourier Integral Transform	317
6	Linear Systems of Differential Equations	327
6.1	Homogeneous Systems of Differential Equations	327
6.1.1	A Diagonalizable Coefficient Matrix	332
6.1.2	Generalized Eigenvectors	336
6.2	The Non-Homogeneous Linear Differential Equations	344
6.3	Stability of Linear Systems	347
7	Nonlinear Differential Equations	371
7.1	One-Dimensional Nonlinear Differential Equations	371
7.2	Two-Dimensional Nonlinear Differential Equations	378
7.2.1	Nonlinear Pendulum	386
7.2.2	Two-Dimensional Population Models	394
7.3	Three-Dimensional Models; The Lorenz equations	402
7.4	KdV Equation and Soliton Waves	407
7.4.1	Darboux Transformations and One-Soliton Solution	415
7.4.2	Crum Transformations and the Multi-Soliton Solutions	419

II	MAPLE	434
	How to read Part II	435
8	Vectors and Vector Calculus	436
8.1	Vectors	436
8.1.1	Vector Definition and Basic Operations with Vectors	437
8.1.2	The Action of Matrices on Vectors	440
8.1.3	Abstract Vector Manipulation	443
8.2	Vector Differential Operators	445
8.2.1	Gradient	445
8.2.2	Directional Derivative, and the Geometrical Interpretation of the Gradient	446
8.2.3	Changing the Coordinate System	450
8.2.4	Manipulating Vector Fields	451
8.2.5	Divergence	451
8.2.6	Curl	452
8.2.7	Successive Applications of ∇ Operator	453
8.3	Curvilinear Coordinates	454
8.3.1	Coordinate Surfaces	456
8.3.2	Coordinate Lines	458
8.3.3	Unit Vectors	461
8.4	Scalar and Vector Potentials	463
8.4.1	Scalar Potential	463
8.4.2	Vector Potential	464
8.5	Integrals	465
8.5.1	Line Integrals	466
8.5.2	Surface Integrals	468
	Calculating the Flux of a Vector Field	468
	Surface Integrals	470
8.5.3	Divergence Theorem	470
8.5.4	Stokes Theorem	472
8.6	Problems	473
9	Matrices and Rotations	476
9.1	Matrix Definition	476
9.2	Operations with Matrices	477
9.2.1	Matrix Multiplication	477
9.2.2	Complex Conjugation	478
9.2.3	Matrix Transposition	479
9.2.4	Hermitian Conjugation	479
9.2.5	The Inverse of a Matrix	479
9.2.6	The Determinant of a Matrix	480

9.3	Eigenvectors and Eigenvalues	482
9.3.1	Diagonalization of Matrices	483
9.4	Special Matrices	485
9.4.1	Orthogonal Matrices	485
9.4.2	Unitary Matrices	487
9.4.3	Hermitian Matrices	489
9.5	Defining Matrices in Maple: General Properties	491
9.5.1	Matrix Function	495
9.6	Matrix Exponential and the Group of Rotations	497
9.7	Problems	501
10	Differential Equations	505
10.1	First Order Differential Equations	505
10.1.1	Separable Equations	505
10.1.2	Exact First Order Differential Equations	508
10.1.3	Linear First Order Differential Equations	510
10.1.4	Vector Fields Associated to First Order Differential Equations	515
10.2	Compact Form of Displaying Differential Equations	518
10.3	Second Order Differential Equations	521
10.3.1	Second Order Homogeneous Linear Differential Equations with Constant Coefficients	521
10.3.2	Reduction of Order	528
10.3.3	Non-Homogeneous Second Order Linear Differential Equations	529
10.3.4	General Method for Particular Solutions	530
10.4	Numerical Solutions of Differential Equations	532
10.5	Problems	537
11	Power Series Solutions of Differential Equations	539
11.1	Power Series Expansion	539
11.1.1	Order of Expansion	539
11.1.2	Leading Term of a Series	540
11.1.3	Radius of Convergence of a Series	541
11.1.4	Taylor Series	542
11.2	Power Series Method: a Step-by-Step Example	543
11.3	Power Series Method, Expansion Around the Regular Point	544
11.3.1	Legendre's Differential Equation; Legendre's Polynomials	546
11.3.2	Hermite Polynomials	548
11.3.3	Laguerre Polynomials	551
11.3.4	Chebyshev Polynomials	554
11.4	The Maple Package <code>powseries</code>	557
11.5	Expansion Around the Singular Point: Frobenius Method	559
11.5.1	Bessel's Differential Equation	562
11.6	Problems	566

12 Special Functions and Generalized Fourier Series	567
12.1 The Sturm-Liouville Theory	567
12.1.1 Introduction	567
12.1.2 Inner Product and Gram-Schmidt Orthogonalization of Functions	569
12.1.3 Fourier-Legendre Series	573
12.1.4 Fourier-Bessel Series	578
12.1.5 Fourier-Hermite Series	585
12.2 Periodic Sturm-Liouville Problem and the Fourier Series	592
12.2.1 Trigonometric Form of the Fourier Series	592
12.2.2 Complex Form of the Fourier Series	598
12.3 Dirac Delta Function and the Fourier Transform	599
12.3.1 Dirac Delta Function	599
12.3.2 Fourier Integral Transform	602
12.4 Problems	605
13 Linear Systems of Differential Equations	606
13.1 Homogeneous Systems of Differential Equations	607
13.2 Non-Homogeneous Systems of Differential Equations	611
13.3 Stability of Linear Systems	613
13.3.1 Unstable Node	614
13.3.2 Stable Node	617
13.3.3 Unstable Saddle (Hyperbolic) Point	619
13.3.4 Unstable Spiral Point	620
13.3.5 Stable Spiral Point	622
13.3.6 Elliptic Fixed Point	623
13.3.7 Unstable Star	624
13.3.8 Stable Star	626
13.4 Problems	628
14 Nonlinear Differential Equations	629
14.1 One-Dimensional Nonlinear Differential Equations	629
14.2 Two-Dimensional Nonlinear Differential Equations	639
14.3 Three-Dimensional Models; The Lorenz Equations	647
14.4 KdV Equation and Soliton Waves	652
14.4.1 Lax Formalism	654
14.4.2 Multi-soliton Solutions	656
14.5 Problems	663
A Complex Variables and Functions	664
A.1 Complex Numbers	664
A.2 Functions of Complex Variables	670

B	Introducing Maple	676
B.1	First Calculations	676
B.2	Getting Help	677
B.3	Manipulating Symbolic Expressions	677
B.4	A Complete Example	679
B.5	More on Plots	682
B.6	More on Expression Manipulation	683
B.7	Solving Equations: The “Exact” Way	685
B.8	Solving Equations: Numerical Solutions	686
B.9	Maple Procedures	688
B.10	Summary	689
B.11	Problems	692
	Index for Part I	693
	Index for Part II	698
