

CONTENTS

Foreword	vii
Preface	ix
About the Editors	xiii
Contributors	xv
1. Modeling Transition: New Scenarios, System Sensitivity and Feedback Control <i>John A. Burns and John R. Singler</i>	1
2. Dynamics of Transitional Boundary Layers <i>Cunbiao Lee and Shiyi Chen</i>	39
3. Continuous Mode Transition <i>Paul Durbin and Tamer Zaki</i>	87
4. Transition in Wall-Bounded Shear Flows: The Role of Modern Stability Theory <i>Peter J. Schmid</i>	107
5. A Framework for Control of Fluid Flow <i>Alan Guégan, Peter J. Schmid and Patrick Huerre</i>	141
6. Instabilities Near the Attachment-Line of Swept Wings <i>Jörn Sesterhenn and Rainer Friedrich</i>	167

7. Experimental Study of Wall Turbulence: Implications for Control <i>Ivan Marusic and Nicholas Hutchins</i>	207
8. Turbulent Boundary Layers and Their Control: Quantitative Flow Visualization Results <i>Michele Onorato, Gaetano M. Di Cicca, Gaetano Iuso, Pier G. Spazzini and Riccardo Malvano</i>	247
9. Mean-Momentum Balance: Implications for Wall-Turbulence Control <i>Joe Klewicki</i>	283
10. The FIK Identity and Its Implication for Turbulent Skin Friction Control <i>Nobuhide Kasagi and Koji Fukagata</i>	297
11. Control of Turbulent Flows Using Lorentz Force Actuation <i>Kenneth S. Breuer</i>	325
12. Compliant Coatings: The Simpler Alternative <i>Mohamed Gad-el-Hak</i>	357
13. Noise Suppression and Mixing Enhancement of Compressible Turbulent Jets <i>Dimitri Papamoschou</i>	405
Index	423
