

Contents

Preface	ix
1. Introduction	1
2. Meteorological and Climatic Observations	9
2.1 The “State” of the Weather	10
2.2 A Definition of Climate	11
2.3 An Overview of Meteorological and Climatic Observations	12
2.4 Conventional Observations	15
2.5 Satellite Observations	16
2.6 Meteorological or Climatic Observations?	21
2.7 Proxy Data	23
2.8 Is There Any Evidence that the Climate is Changing?	27
3. Naive Meteorology, Coincidences and Correlations	33
3.1 Approaching an Analysis of the Data and of Common Experience .	34
3.2 A Naive Interpretation and Its Problems	37
3.3 Coincidences and Correlations in Available Data	42
3.4 Let Us Take Stock of the Situation	50
4. The Theoretical Framework: Knowledge of Single Phenomena and Complexity of the Earth System	51
4.1 How Can We Read the “Great Book of Nature”?	51
4.2 The Local Approach to the Study of a System	54
4.3 The Interaction between Radiation and Matter and the Greenhouse Effect	58
4.4 Greenhouse Gases, Clouds and Aerosols	65
4.5 Approaching a Complete Scheme of Warming from the Bottom	68
4.6 Nature of the Ground and Air Warming	73
4.7 An Outline of Oceanic and Atmospheric Dynamics	77
4.8 Feedbacks and Complexity of System	81

5. The Galilean Experimental Method: A Digression?	89
5.1 Aristotelian Physics of Local Motions and the Advent of Galileo Galilei	90
5.2 The Galilean “Style”	94
5.3 A Galilean Method for Studying the Weather and the Climate?	97
6. Simulation Models	103
6.1 How Many Meanings Does the Word “Model” Have?	103
6.2 The Simulation Approach	107
6.3 Conceptual Novelties in the Simulation Method and Its Use	111
7. Meteorological Models	117
7.1 The “Perception” of the Weather Forecasting Activity	117
7.2 The Heart of a Meteorological Model: Primitive Equations and Their Numerical Solutions	119
7.3 Physical Parameterisations	126
7.4 Determination of Initial State and Analysis Procedure	128
7.5 The Products of a Meteorological Model	131
7.6 The Emergence of Deterministic Chaos and Ensemble Integrations	134
7.7 A Few Conceptual Remarks	142
8. Climatic Models	149
8.1 From Weather Forecasting to Climate Forecasting: What Changes?	149
8.2 The Concept of “Attractor” and Climatic Simulations	151
8.3 Approaching the Description of a Coupled and Highly Interacting Climate System	156
8.4 Experiments for Validation and Sensitivity Testing of a Climatic Model	161
8.5 Evolutionary Validation and Climatic Forecasts	165
8.6 Simplified Models and Regional-Scale Models	170
8.7 Simulation Results	174
8.8 Further Remarks about Climate Change and Its Study	179
9. Conclusions and Prospects	185
9.1 The Results of Climatic Models and “What Should We Do?”	186
9.2 The Future of Models for Studying the Weather and Climate	189
Bibliography	195
Index	197
