Preface

Chapter 1	Risk Models and Ruin Theory	1
1.1	On the Distribution of Surplus Immediately after Ruin under Interest Force	2
1.1.1	The Risk Model	2
1.1.2	Equations for $\overline{G}_\delta(u, y)$	3
1.1.2.1	Integral Equations for $\overline{G}_\delta(u, y)$, $\tilde{G}_\delta(u, y)$ and $G_\delta(u, y)$	3
1.1.2.2	The Case $\delta = 0$	6
1.1.3	Upper and Lower Bounds for $\overline{G}_\delta(0, y)$	8
1.2	On the Distribution of Surplus Immediately before Ruin under Interest Force	11
1.2.1	Equations for $B_\delta(u, y)$	12
1.2.1.1	Integral Equations for $B_\delta(u, y)$	12
1.2.1.2	The Case $\delta = 0$	14
1.2.1.3	Solution of the Integral Equation	15
1.2.2	$B_\delta(u, y)$ with Zero Initial Reserve	17
1.2.3	Exponential Claim Size	19
1.2.4	Lundberg Bound	20
1.3	Asymptotic Estimates of the Low and Upper Bounds for the Distribution of the Surplus Immediately after Ruin under Subexponential Claims	21
1.3.1	Preliminaries and Auxiliary Relations	22
1.3.2	Asymptotic Estimates of the Low and Upper Bounds	27
1.4	On the Ruin Probability under a Class of Risk Processes	34

1.4.1	The Risk Model	34
1.4.2	The Laplace Transform of the Ruin Probability with Finite Time	34
1.4.3	Two Corollaries	40

Chapter 2 Compound Risk Models and Copula Decomposition

		47
2.1	Introduction	47
2.2	Individual Risk Model and Compound Risk Model	48
2.2.1	The Link between the Compound Risk Model and the Individual Risk Model	49
2.2.2	One Theorem on Excess-of-loss Reinsurance	50
2.3	Recursive Calculation of Compound Distributions	52
2.3.1	One-dimensional Recursive Equations	53
2.3.2	Proofs of Theorems 2.2-2.3	58
2.3.3	Bivariate Recursive Equations	63
2.4	The Compound Poisson Random Variable's Approximation to the Individual Risk Model	65
2.4.1	The Existence of the Optimal Poisson r.v.	66
2.4.2	The Joint Distribution of $(N_n^0(\theta), N_n)$	69
2.4.3	Evaluating the Approximation Error	70
2.4.4	The Approximation to Functions of the Total Loss	73
2.4.5	The Uniqueness of the Poisson Parameter to Minimizing $H_n(\theta)$	74
2.4.6	Proofs	75
2.5	Bivariate Copula Decomposition	82
2.5.1	Copula Decomposition	83
2.5.2	Application of the Copula Decomposition	88

Chapter 3 Comonotonically Additive Premium Principles and Some Related Topics

		93
3.1	Introduction	93
3.2	Characterization of Distortion Premium Principles	94
3.2.1	Preliminaries	95
3.2.2	Greco Theorem	98
3.2.3	Characterization of Distortion Premium Principles	101
3.2.4	Further Remarks on Additivity of Premium Principles	107

- 3.2.4.1 Representation of Strictly Additive Premium Principles. 107
- 3.2.4.2 Relationship among Additivities. 109
- 3.3 Natural Sets of Distortion Premium Principles 111
- 3.4 Ordering Risks by Distortion Premiums 119
 - 3.4.1 n -ordered Orders of Real-valued Random Variables. . 121
 - 3.4.2 n -ordered Dual Orders of Real-valued Random Variables. 124
- 3.5 Final Remarks 129

Chapter 4 Fuzzy Comprehensive Evaluation and Fuzzy Information Processing for Risks 133

- 4.1 Introduction 133
- 4.2 Fuzzy Comprehensive Evaluation for Risks 134
 - 4.2.1 Basic Concepts and Process 134
 - 4.2.1.1 Construct Factor Set 134
 - 4.2.1.2 Construct Weight Set 134
 - 4.2.1.3 Construct Evaluation Set 134
 - 4.2.1.4 Single Factor Fuzzy Evaluation 135
 - 4.2.1.5 Fuzzy Comprehensive Evaluation 135
 - 4.2.2 An Example of Risk Evaluation 136
 - 4.2.2.1 Determination of Main Risk Factors 136
 - 4.2.2.2 Evaluation of the Risk 137
 - 4.2.2.3 Applications 139
- 4.3 Fuzzy Information Distribution in Risk Evaluation and Analysis 140
 - 4.3.1 Concept of Fuzzy Information Distribution 140
 - 4.3.2 Information Distribution Method 141
 - 4.3.3 Improving IDM 144
 - 4.3.4 Applications 145
- 4.4 Information Diffusion and Its Application to Risk Analysis . 146
 - 4.4.1 Mechanism of Information Diffusion 146
 - 4.4.2 An Example of Application — 1D Problem 148
 - 4.4.2.1 Large Sample 149
 - 4.4.2.2 Small Sample — Statistical Approach 149
 - 4.4.2.3 Small Sample — UIDM 150
 - 4.4.3 An Example of Application — 2D Problem 151
 - 4.4.3.1 Large Sample 151
 - 4.4.3.2 Small Sample — Statistical Approach 151

4.4.3.3	Small Sample — UIDM	152
4.4.4	Optimized Information Diffusion Method (OIDM)	153
4.4.4.1	OIDM in 1D Case	154
4.4.4.2	OIDM in 2D Case	156
4.5	Conclusion	157

Chapter 5 Application of Fuzzy Mathematics to Actuarial Science

		159
5.1	Introduction	159
5.2	Some Basic Notions of Fuzzy Set Theory	160
5.3	Application of FST in Life Insurance Game	162
5.3.1	Background	162
5.3.2	Some Relative Concepts and Theorems	162
5.3.3	Model of Game	166
5.3.4	The Example of Application	167
5.3.4.1	The Example	167
5.3.4.2	Conclusion	171
5.4	Decision-Making Method Applied in Life Insurance Companies	171
5.4.1	Background	171
5.4.2	The Passive Decision—Two-stage Fuzzy Comprehensive Valuation	172
5.4.3	The Initiative Decision—Multi-object Fuzzy Group Decision	174
5.4.4	Synthetic Decision	178
5.5	The Risk Analysis of Complications for Some Diseases	179
5.5.1	Background	179
5.5.2	The Risk of Complications	180
5.5.2.1	Determining the Variable	180
5.5.2.2	Define the Similar Matrix R	180
5.5.2.3	The Transitive Closure $t(R)$	182
5.5.2.4	Optimum Fuzzy Equivalent Matrix R_{\min}	183
5.5.2.5	Some Results	183
5.5.3	The Illness Degree of Diseases	184
5.5.3.1	Basic Concept and Method	184
5.5.3.2	ξ_h : Illness Degree of Hypertension (IDOH)	185
5.5.3.3	ξ_c : Illness Degree of Coronary Heart Disease (IDOC)	186
5.5.3.4	The Relationship between Hypertension and Coronary Heart Disease	186

5.5.3.5	The Application to Insurance	188
5.6	Regression Forecasting Model with Fuzzy Factors	190
5.6.1	Background	190
5.6.2	Regression Forecasting Model with Crisp Factors	190
5.6.3	Regression Forecasting Model with Crisp Factors and Fuzzy Factors	191
5.6.3.1	Some Concepts, Methods and an Application Example	192
5.6.3.2	Regression Forecasting Model with Crisp Factors and Fuzzy Factors	194
5.6.4	Example and Comparison of Two Kinds of Regression Model	195
5.6.5	Conclusion	198

Chapter 6 Some Applications of Financial Economics to Insurance

		201
6.1	Introduction	201
6.2	General Framework of the Valuation of Unit-linked Insurance Policy	203
6.2.1	Differential Equation Models for the Valuation of Policies without Surrender Option	204
6.2.2	P.D.E. Model for the Valuation of Policies with Surrender Option	206
6.2.3	Generalized Expected Discounted Value Approach	208
6.3	Fair Valuation of First Kind of Unit-linked Policy	210
6.3.1	The Case $\sigma(t, A) = 0$	210
6.3.2	The Case $\sigma(t, A) \neq 0$	212
6.4	Fair Valuation of Second Kind of Unit-linked Policy without Surrender Option	214
6.4.1	P.D.E. Approach	215
6.4.2	G.E.D.V. Approach	219
6.5	Fair Valuation of Second Kind of Unit-linked Policy with Surrender Option	221
6.5.1	Analysis of Parameters	223
6.5.2	Local Analysis of Free Boundary near the Expiry Date	226
6.5.3	Integral Equation on $v(t, A)$	229
6.5.4	Numerical Results	232
6.5.4.1	Linear Complementary Problem and Projected SOR Method	232

6.5.4.2 Solving Integral Equation (6.131)	240
---	-----

Chapter 7 Exploring on the Risk Profile of China Insurance for Setting Appropriate Solvency Capital Requirement	245
7.1 Introduction	245
7.2 Toward a Risk-oriented Approach of Solvency Supervision System for China Insurers	247
7.2.1 Internal Control	248
7.2.2 Solvency Capital Requirement	248
7.2.3 On Site Inspection	250
7.2.4 Investment Control	250
7.2.5 Guarantee Fund	251
7.3 Risk Construction of Chinese Insurers	251
7.3.1 Risk Concepts	251
7.3.2 Identification of Methodologies	252
7.3.2.1 Normative Studies: International Comparisons and Case Analysis	253
7.3.2.2 Statistical Analysis	254
7.3.2.3 Field Study and Cases Analysis on China Insurers	255
7.3.2.4 Combined Approach	256
7.3.3 Keeping Up an Overall and Historical View on the Evolution of Risk Profile of China Insurance	256
7.3.3.1 Period 1: 1980 — 1995	257
7.3.3.2 Period 2: 1995 — End of 2003	258
7.3.3.3 Period 3: 2004 — Near Future	259
7.3.4 Risk Characteristics and Proposed Principles for Solvency Capital Requirement	261
7.3.4.1 Main Characteristics of Risk Profile	261
7.3.4.2 Guiding Principles for Setting Capital Requirement	262
Index	265
