<i>Preface</i>	v
1. Krein-Rutman Theorem and the Principal Eigenvalue	1
2. Maximum Principles Revisited	9
2.1 Equivalent forms of the maximum principle	9
2.2 Maximum principle in $W^{2,N}(\Omega)$	11
3. The Moving Plane Method	17
3.1 Symmetry over bounded domains	17
3.2 Symmetry over the entire space	23
3.3 Positivity of nonnegative solutions	28
4. The Method of Upper and Lower Solutions	33
4.1 Classical upper and lower solutions	33
4.2 Weak upper and lower solutions	39
5. The Logistic Equation	61
5.1 The classical case	61
5.2 The degenerate logistic equation	64
5.3 Perturbation and profile of solutions	75
6. Boundary Blow-Up Problems	83
6.1 The Keller-Osserman result and its generalizations	84
6.2 Blow-up rate and uniqueness	95
6.3 Logistic type equations with weights	102

7. Symmetry and Liouville Type Results over Half and Entire Spaces	117
7.1 Symmetry in a half space without strong maximum principle	117
7.2 Uniqueness results of logistic type equations over R^N	128
7.3 Partial symmetry in the entire space	139
7.4 Some Liouville type results	145
Appendix A Basic Theory of Elliptic Equations	163
A.1 Schauder theory for elliptic equations	163
A.2 Sobolev spaces	166
A.3 Weak solutions of elliptic equations	170
A.4 L^p theory of elliptic equations	174
A.5 Maximum principles for elliptic equations	177
A.5.1 The classical maximum principles	177
A.5.2 Maximum principles and Harnack inequality for weak solutions	178
A.5.3 Maximum principles and Harnack inequality for strong solutions	179
<i>Bibliography</i>	181
<i>Index</i>	189
