

CONTENTS

Prologue	ix
Section I: Measuring Time	
The Measurement of Time with Atomic Clocks <i>E. Peik</i>	3
Measuring the Frequency of Light <i>T. W. Hänsch</i>	17
Time and Space Variation of Fundamental Constants: Motivation and Laboratory Search <i>S. G. Karshenboim</i>	26
Section II: Causality & Signal Propagation	
Causality and Superluminal Light <i>G. M. Shore</i>	45
Quantum Fluctuations and Signal Velocity in Superluminal Light Pulse Propagation <i>L. J. Wang</i>	67
Time and Matter in the Interaction between Gravity and Quantum Fluids: Are there Macroscopic Quantum Transducers between Gravitational and Electromagnetic Waves? <i>R. Y. Chiao & W. J. Fitelson</i>	85
Section III: Coherence & Decoherence	
Decoherence Unlimited: From Zeno to Classical Motion <i>E. Joos</i>	103
Coherence and the Clock <i>L. Stodolsky</i>	117
Decoherence, Chaos and the Second Law <i>W. H. Zurek</i>	132

Contributed Papers

What Could We Have Been Missing While Pauli's Theorem Was
in Force? 133
E. A. Galapon

Simultaneity and the Concept of 'Particle' 145
C. E. Dolby

Section IV: CP & T Violation

CP and T Violation in the Kaon System 161
E. Blucher

Time-Reversal Non-Invariance 176
D. Zavrtnik

'Per Aspera ad Astra' — A Short Essay on the Long Quest
for CP Violation 185
I. I. Bigi

Section V: Macroscopic Time Reversal and the Arrow of Time

The Thermodynamic Arrow: Puzzles & Pseudo-Puzzles 209
H. Price

Arrow of Time from Timeless Quantum Gravity 225
C. Kiefer

The Evolution of the Universe 235
J. Garcia-Bellido

Did Time and Its Arrow have a Beginning? 250
G. Veneziano

The Wormhole Hazard 260
S. Krasnikov

Elementary Particles as Black Holes 270
G. 't Hooft

Contributed Paper

Counter-Example where Cosmic Time Keeps Its Original Role in
Quantum Cosmology

271

E. I. Guendelman & A. B. Kaganovich

Section VI: New Paradigms

String Theory, Space and Time

285

C. M. Hull

Quantized Space and Time

303

P. Schupp
