<i>Preface</i>	vii
1. Introduction	1
1.1 Quasiparticles and Green's functions	3
1.2 Diagram technique. Dyson equation	11
1.3 Green's functions at finite temperatures	13
2. Electron-Electron Interaction	17
2.1 Diagram rules	17
2.2 Electron gas with Coulomb interaction	18
2.3 Polarization operator of free electron gas at $T = 0$	22
2.4 Dielectric function of an electron gas	24
2.5 Electron self-energy, effective mass and damping of quasiparticles	28
2.6 RKKY-oscillations	32
2.7 Linear response	35
2.8 Microscopic foundations of Landau–Silin theory of Fermi-liquids	44
2.9 Interaction of quasiparticles in Fermi-liquid	50
2.10 Non-Fermi-liquid behavior	67
3. Electron-Phonon Interaction	71
3.1 Diagram rules	71
3.2 Electron self-energy	75
3.3 Migdal theorem	84
3.4 Self-energy and spectrum of phonons	87

3.5	Plasma model	92
3.6	Phonons and fluctuations	97
4.	Electrons in Disordered Systems	101
4.1	Diagram technique for “impurity” scattering	101
4.2	Single-electron Green’s function	105
4.3	Keldysh model	114
4.4	Conductivity and two-particle Green’s function	121
4.5	Bethe–Salpeter equation, “diffuson” and “Cooperon”	130
4.6	Quantum corrections, self-consistent theory of localization and Anderson transition	140
4.6.1	Quantum corrections to conductivity	140
4.6.1.1	Technical details	142
4.6.1.2	“Poor man” interpretation of quantum corrections	149
4.6.2	Self-Consistent Theory of Localization	152
4.6.2.1	Metallic phase	155
4.6.2.2	Anderson insulator	157
4.6.2.3	Frequency dispersion of the generalized diffusion coefficient	161
4.7	“Triangular” vertex	162
4.8	The role of electron-electron interaction	165
5.	Superconductivity	177
5.1	Cooper instability	177
5.2	Gorkov equations	185
5.3	Superconductivity in disordered metals	201
5.4	Ginzburg–Landau expansion	208
5.5	Superconductors in electromagnetic field	223
6.	Electronic Instabilities and Phase Transitions	241
6.1	Phonon spectrum instability	241
6.2	Peierls dielectric	253
6.3	Peierls dielectric with impurities	260
6.4	Ginzburg–Landau expansion for Peierls transition	267
6.5	Charge and spin density waves in multi-dimensional systems. Excitonic insulator	270
6.6	Pseudogap	279

6.6.1	Fluctuations of Peierls short-range order	279
6.6.2	Electron in a random field of fluctuations	285
6.6.3	Electromagnetic response	298
6.7	Tomonaga–Luttinger model and non Fermi-liquid behavior	321
Appendix A	Fermi Surface as Topological Object	333
Appendix B	Electron in a Random Field and Feynman Path Integrals	339
	<i>Bibliography</i>	345
