| <b>Preface to the Expanded English Edition</b>               | <b>v</b>   |
| <b>Preface to the Chinese Edition</b>                        | <b>vii</b> |
| <b>1 Heat and the First Law</b>                              | <b>1</b>   |
| 1.1 The Scope of Thermodynamics . . . . .                    | 1          |
| 1.2 Some Definitions . . . . .                               | 5          |
| 1.3 The Zeroth Law of Thermodynamics . . . . .               | 7          |
| 1.4 Equilibrium State . . . . .                              | 8          |
| 1.5 The First Law of Thermodynamics . . . . .                | 10         |
| 1.6 Exact and Inexact Differentials . . . . .                | 11         |
| 1.7 Work in Thermodynamics . . . . .                         | 13         |
| 1.8 Enthalpy . . . . .                                       | 14         |
| 1.9 Heat Capacity . . . . .                                  | 15         |
| 1.10 $C_P - C_V$ for an Ideal Gas . . . . .                  | 17         |
| 1.11 Reversible Adiabatic Process for an Ideal Gas . . . . . | 18         |
| 1.12 Virial Expansion . . . . .                              | 19         |
| 1.13 Expansion Coefficient and Compressibility . . . . .     | 22         |
| 1.14 Problems . . . . .                                      | 24         |
| <b>2 Entropy and the Second Law</b>                          | <b>29</b>  |
| 2.1 Introduction . . . . .                                   | 29         |
| 2.2 Entropy . . . . .  | 31         |

|          |  |           |
|----------|--|-----------|
| 2.3      | Spontaneous or Irreversible Processes . . . . .                          | 33        |
| 2.4      | Heat Engines and Refrigerators . . . . .                                 | 34        |
| 2.5      | The Second Law of Thermodynamics . . . . .                               | 37        |
| 2.6      | A Carnot Cycle and Carnot Engine . . . . .                               | 39        |
| 2.7      | Carnot's Theorem . . . . .   | 41        |
| 2.8      | Thermodynamic Temperature . . . . .                                      | 43        |
| 2.9      | Ideal Gas Temperature vs. Thermodynamic<br>Temperature . . . . .         | 45        |
| 2.10     | Entropy Derived From the Second Law . . . . .                            | 47        |
| 2.11     | Entropy Change for a Reversible Process . . . . .                        | 50        |
| 2.12     | The Clausius Inequality . . . . .  | 51        |
| 2.13     | The Principle of Non-Decrease of Entropy and the<br>Second Law . . . . . | 53        |
| 2.14     | Entropy Change for an Irreversible Process . . . . .                     | 56        |
| 2.15     | An Example of Reversible vs. Irreversible Heat . . . . .                 | 57        |
| 2.16     | The Natural Variables for $U$ and $S$ . . . . .                          | 61        |
| 2.17     | Increase of Entropy and Degradation of Energy . . . . .                  | 62        |
| 2.18     | Problems . . . . .   | 65        |
| <b>3</b> | <b>Microscopic Interpretation of Entropy</b>                             | <b>73</b> |
| 3.1      | Introduction . . . . .   | 73        |
| 3.2      | Macroscopic State vs. Microscopic State . . . . .                        | 74        |
| 3.3      | Entropy and the Multiplicity of a Macrostate . . . . .                   | 75        |
| 3.4      | The Most Probable Energy vs. Thermal Equilibrium . . . . .               | 79        |
| 3.5      | Entropy and the Second Law of Thermodynamics . . . . .                   | 80        |
| 3.6      | Calculation of $\Omega(E, V)$ for an Ideal Gas . . . . .                 | 82        |
| 3.7      | Proof of $U = U(T)$ Thermodynamically . . . . .                          | 85        |
| 3.8      | The Gibbs Paradox . . . . .  | 86        |
| 3.9      | Thermal Entropy and Configuration Entropy . . . . .                      | 88        |
| 3.10     | Problems . . . . .   | 91        |

---

|          |  |            |
|----------|--|------------|
| <b>4</b> | <b>Consequences of the First and Second Laws</b>       | <b>93</b>  |
| 4.1      | Calculations of the Entropy Change . . . . .           | 93         |
| 4.2      | Numerical Examples . . . . .                           | 96         |
| 4.3      | Entropy Change for an Ideal Gas . . . . .              | 99         |
| 4.4      | The Entropy of Mixing . . . . .                        | 102        |
| 4.5      | The $Tds$ Equations . . . . .                          | 104        |
| 4.6      | Applications . . . . .                                 | 108        |
| 4.7      | Problems . . . . .                                     | 112        |
| <br>     |  |            |
| <b>5</b> | <b>Thermodynamic Potentials</b>                        | <b>117</b> |
| 5.1      | Introduction . . . . .                                 | 117        |
| 5.2      | Thermodynamic Equilibrium for an Isolated System . . . | 119        |
| 5.3      | Thermodynamic Potentials . . . . .                     | 121        |
| 5.4      | The Helmholtz Free Energy . . . . .                    | 123        |
| 5.5      | The Gibbs Free Energy . . . . .                        | 124        |
| 5.6      | The Maxwell Relations . . . . .                        | 125        |
| 5.7      | Open Systems and the Chemical Potential . . . . .      | 127        |
| 5.8      | The Gibbs-Duhem Relation . . . . .                     | 129        |
| 5.9      | Conditions of Stable Equilibrium . . . . .             | 132        |
| 5.10     | Problems . . . . .                                     | 137        |
| <br>     |  |            |
| <b>6</b> | <b>Cooling and the Third Law</b>                       | <b>141</b> |
| 6.1      | Introduction . . . . .                                 | 141        |
| 6.2      | Gay-Lussac–Joule Experiment . . . . .                  | 142        |
| 6.3      | Cooling by the Joule-Thomson Experiment . . . . .      | 144        |
| 6.4      | Cooling by Adiabatic Demagnetization . . . . .         | 149        |
| 6.5      | Laser Cooling . . . . .                                | 152        |
| 6.6      | The Third Law of Thermodynamics . . . . .              | 155        |
| 6.7      | Equivalence of Nernst Statements . . . . .             | 158        |
| 6.8      | Consequences of the Third Law . . . . .                | 160        |
| 6.9      | Problems . . . . .                                     | 162        |
