

1. Introduction	1
Bibliography	8
2. Controlled Growth of Nanowires and Nanobelts	11
2.1 Introduction	13
2.2 Oxides nanowires and nanobelts	14
2.2.1. ZnO	14
2.2.2. SnO ₂	19
2.2.3. In ₂ O ₃	23
2.2.4. MgO	26
2.2.4.1. Controlled growth of MgO nanostructures	27
2.2.4.2. Direct observation of the growth process of MgO nanoflowers	29
2.2.5. Al ₂ O ₃	32
2.3 Sulfides nanowires and nanobelts	37
2.3.1. ZnS	37
2.3.2. CdS	42
2.4 Doping of nanowires and nanobelts	47
2.4.1. S-doped ZnO nanowires	47
2.4.2. Ce-doped ZnO nanostructures	48
2.4.3. Sn-doped ZnO nanobelts	51
2.4.4. Mn-doped ZnS nanobelts	53
Bibliography	56

3. Design and Synthesis of One-Dimensional Heterostructures	67
3.1 Introduction	69
3.2 Synthesis of one-dimensional heterostructures	70
3.2.1. Coaxial core/shell structure (nanocable) and biaxial nanowires	70
3.2.2. Heterojunction and superlattice nanowire structure	77
3.2.3. Complex branch structure (hierarchical structure)	82
3.3 Concluding remarks	96
Bibliography	97
4. Quasi-Zero Dimensional Nanoarrays	101
4.1 Synthesis of two-dimensional colloid crystals	103
4.1.1. Drop coating	105
4.1.2. Spin-coating	107
4.1.3. Perpendicular withdrawing	108
4.2 Ordered nanoarrays based on two-dimensional colloidal crystal templates	110
4.2.1. Ordered pore arrays	112
4.2.1.1. ZnO-ordered pore arrays based on electro-deposition and colloidal monolayers	112
4.2.1.2. Au-ordered through-pore arrays based on electro-deposition and colloidal monolayers	120
4.2.1.3. SnO ₂ mono- and multi-layered nanostructured porous films based on solution-dipping templates	128
4.2.1.4. Fe ₂ O ₃ -ordered pore arrays based on solution-dipping templates and colloidal monolayer	133
4.2.1.5. In ₂ O ₃ -ordered pore arrays based on solution-dipping templates and colloidal monolayers	141
4.2.2. Two-dimensional ordered polymer hollow sphere and convex structure arrays based on monolayer pore films	147
4.2.3. Au nanoparticle arrays	153
Bibliography	159

5. Nanoarray Synthesis and Characterization based on Alumina Templates	165
5.1 Preparation techniques of ordered channel AAM (anodization alumina membrane) templates	167
5.1.1. Preparation of ordered channel AAM templates	168
5.1.2. Structure and characterization of ordered channel AAM templates	170
5.1.3. Exploration of ordered channel formation mechanism	171
5.2 Synthesis and characterization of ordered nanoarrays	174
5.2.1. Ordered nanoarrays of elements	175
5.2.1.1. Ordered nanoarrays of metal nanowires and nanotubes (Pb, Ag, Cu, Au)	175
5.2.1.2. Ordered nanoarrays of semimetal nanowires and nanotubes	192
5.2.1.3. Ordered nanoarrays of Sb nanowires and nanotubes	206
5.2.1.4. Ordered nanoarrays of semiconductor nanowires and nanotubes	210
5.2.1.5. Ordered nanoarrays of carbon nanotubes	214
5.2.2. Ordered nanoarrays of binary compound nanowires	226
5.2.2.1. Ordered nanoarrays of alloy nanowires	226
5.2.2.2. Ordered nanoarrays of oxide nanowires and nanotubes	232
5.2.2.3. Ordered nanoarrays of sulphide, selenide, telluride and ionide nanowires	247
5.2.3. Ordered nanoarrays of ternary compound nanowires	268
5.2.3.1. Co-Ni-P alloy nanoarrays	268
5.2.3.2. Ni-W-P alloy nanowire arrays	271
Bibliography	275
6. Controlled Growth of Carbon Nanotubes	287
6.1 Introduction	289
6.2 Preparation, morphologies and structures of Small diameter carbon nanotubes (CNTs)	291
6.2.1. Multi-walled carbon nanotubes (MWNTs)	292
6.2.2. Single-walled carbon nanotubes (SWNTs)	295
6.2.3. Discussion and analysis	295

6.3	Very long carbon nanotubes and continuous carbon nanotube yarns (fibers)	300
6.3.1.	Very long carbon nanotubes	301
6.3.2.	Spinning continuous carbon nanotube yarns (fibers)	304
6.4	Controlled synthesis of single-walled carbon nanotubes	306
6.4.1.	Preparation of pure single-walled carbon nanotubes	307
6.4.2.	Direct synthesis of a macroscale single-walled carbon nanotubes non-woven material	312
6.4.3.	Synthesis of random networks of single-walled carbon nanotubes	316
6.5	Synthesis of double-walled carbon nanotubes (DWNTs)	319
	Bibliography	323
7.	Synthesis of Inorganic Non-carbon Nanotubes	327
7.1	Introduction	329
7.2	Synthesis of inorganic nanotubes	330
7.2.1.	Inorganic nanotubes based on two-dimensional structures	331
7.2.1.1.	Inorganic nanotubes based on graphite (carbon nanotubes)	331
7.2.1.2.	Inorganic nanotubes based on transition metal chalcogenides and halides	331
7.2.1.3.	Inorganic nanotubes based on boron nitride and the derivatives	339
7.2.1.4.	Inorganic nanotubes based on rare earth and transition metal oxides and their derivatives	340
7.2.2.	Inorganic nanotubes based on quasi-two-dimensional structures	342
7.2.3.	Inorganic nanotubes based on three-dimensional structures	350
7.2.4.	Formation mechanisms of inorganic nanotubes	355
7.3	Concluding remarks	360
	Bibliography	360

8. Novel Properties of Nanomaterials	367
8.1 Introduction	369
8.2 Polarization characteristics of metal nanowire microarrays embedded in anodic alumina membrane templates	369
8.2.1. Introduction	369
8.2.2. Optical measurement	370
8.2.3. Polarization characteristics	371
8.2.3.1. Cu/AAM	371
8.2.3.2. Ag/AAM	374
8.2.3.3. Pb/AAM	375
8.2.4. Theoretical calculation	376
8.2.4.1. Theory model	377
8.2.4.2. Numerical simulation	380
8.2.5. Conclusion	388
8.3 Electronic and magnetic properties of Bi-based nanowire arrays	388
8.3.1. Bi nanowire arrays	389
8.3.2. Bi-Bi homogeneous nanowire junction	391
8.3.3. Y-segment Bi nanowire array	392
8.3.4. Bi-Sb segment nanowire junction	394
8.4 Thermal expansion properties of nanowire arrays	395
8.4.1. AgI nanowire arrays	395
8.4.2. Bi nanowire arrays	398
8.4.3. Cu nanowire arrays	401
Bibliography	403
9. Applications	407
9.1 Introduction	409
9.2 Sensors	409
9.2.1. SnO ₂ gas sensors	409
9.2.2. Biosensors	420
9.2.2.1. Nanodevices for electrical detection of single viruses	420
9.2.2.2. Nanoelectromechanical devices for detection of viruses	426
9.2.2.3. Biological magnetic sensors	431
9.2.2.4. Biotin-modified Si nanowire nanosensors for detection of protein binding	435

x Contents

9.2.2.5. Bio-conjugated nanoparticles for rapid detection of single bacterial cell	438
9.2.2.6. Near-infrared optical sensors based on single-walled carbon nanotubes	440
9.2.3. Chemical sensors	442
9.3 Field emission of carbon nanotubes and its application	445
9.4 Light polarization	448
9.5 Light-bulb filaments made of carbon nanotube yarns	453
9.6 Electronic and optoelectronic nanoscale devices	453
Bibliography	457
Index	463
