

CONTENTS

| | |
|---|-----|
| Preface | v |
| 1. One-Electron Equations for Embedded Electron Density: Challenge for Theory and Practical Payoffs in Multi-Level Modelling of Complex Polyatomic Systems <i>Tomasz A. Wesolowski</i> | 1 |
| 2. Density-Functional Based Investigation of Molecular Magnets <i>Mark R. Pederson, Kyungwha Park and Tunna Baruah</i> | 83 |
| 3. Vibrational Spectra by Electron Impact: Theoretical Models for Intensities <i>Petr Čársky and Roman Čurík</i> | 121 |
| 4. Theoretical Description of the Kinetics of Gas-Phase Reactions Important in Atmospheric Chemistry <i>Jerzy T. Jodkowski</i> | 139 |
| 5. Predicting and Understanding the Signs of One- and Two-Bond Spin-Spin Coupling Constants across X-H-Y Hydrogen Bonds <i>Janet E. Del Bene and José Elguero</i> | 229 |
| 6. Towards the Elucidation of the Activation of Cisplatin in Anticancer Treatment <i>Jaroslav V. Burda, Jiří Šponer and Jerzy Leszczynski</i> | 265 |
| Index | 323 |
| Content Index | 331 |
