<i>Preface</i>	vii
Introduction	1
1 Diagnostic Tests	1
2 Tests Performed at Long and Short Term Intervals	5
3 Long-Term Tests	9
4 Temperature Influence	11
5 The Influence of the Hydrostatic Pressure	12
6 Variation of Elastic Parameters with Plastic Strain (Metals)	12
1. Yield Conditions	15
1.1 Stresses	15
1.2 Yield Conditions	19
1.3 The Classical Constitutive Equation for Perfectly Plastic Materials	22
1.4 Work-Hardening Materials	25
1.5 Isotropic Hardening	27
1.6 The Universal Stress–Strain Curve	29
1.7 Constitutive Equation for Isotropic Work-Hardening Materials . .	30
1.8 The Drucker’s Postulate	31
1.9 Kinematical Work-Hardening	32
1.10 Further Developments	34
1.11 Experimental Tests	35
1.12 Viscoplasticity	38
1.13 Rate Type Constitutive Equations	42
1.14 General Principles	43
2. Rocks and Soils	53
2.1 Introduction	53
2.2 Experimental Foundation	59

2.3	The Constitutive Equation	71
2.4	Failure	76
2.5	Examples	88
2.6	Viscoelastic Model	94
3.	The Propagation of Longitudinal Stress Waves in Thin Bars	105
3.1	The Equation of Motion	105
3.2	The Finite Constitutive Equation	108
3.3	The Unloading Problem	124
3.4	Determination of the Loading/Unloading Boundary	127
3.5	The Finite Bar	134
3.6	Examples	144
3.7	The Elastic Solution	155
4.	Rate Influence	169
4.1	Experimental Results	169
4.2	The Constitutive Equation	176
4.3	Instantaneous Plastic Response	181
4.4	Numerical Examples	189
4.5	Other Papers	194
5.	Mechanics of Extensible Strings	217
5.1	Introduction	217
5.2	Equations of Motion	221
5.3	The Finite Constitutive Equation: Basic Formulae	223
5.4	The Order of Propagation of Waves	226
5.5	Boundary and Initial Conditions	227
5.6	Numerical Examples	230
5.7	Rate Influence	232
5.8	Shock Waves	237
5.9	Other Papers	240
6.	Flow of a Bingham Fluid	251
6.1	Flow of a Bingham Fluid Through a Tube	251
6.2	Flow of a Bingham Fluid Between Two Circular Concentric Cylinders (Reiner [1960])	259
6.3	A Model for Slow Motion of Natural Slopes (Cristescu <i>et al.</i> [2002])	268
6.4	How to Measure the Viscosity and Yield Stress	290
7.	Axi-Symmetrical Problems	315
7.1	Introduction	315

7.2	Enlargement of a Circular Orifice	317
7.3	Thin Wall Tube	321
7.4	Wire Drawing	332
7.4.1	Introduction	332
7.4.2	Basic Equations	334
7.4.3	Friction Laws	336
7.4.4	Drawing Stress	337
7.4.5	Comparison with Experimental Data	339
7.4.6	Other Papers	342
7.5	Floating Plug	346
7.5.1	Formulation of the Problem	346
7.5.2	Kinematics of the Deformation Process	347
7.5.3	Friction Forces	349
7.5.4	Determination of the Shape of the Floating Plug	351
7.5.5	The Drawing Force	354
7.5.6	Numerical Examples	357
7.6	Extrusion	366
7.6.1	Formulation of the Problem	366
7.6.2	Kinematics of the Process	368
7.6.3	The Approximate Velocity Field	372
7.6.4	The Extrusion Pressure	374
7.6.5	Numerical Examples	375
8.	Plastic Waves. Perforation	383
8.1	Introduction	383
8.2	Various Theories	384
8.3	Perforation with Symmetries	393
8.4	Modeling of the Taylor Cylinder Impact Test. Anisotropy	407
8.5	Analysis of the Steady-State Flow of a Compressible Viscoplastic Medium Over a Wedge (Cazacu <i>et al.</i> [2006])	410
9.	Hypervelocity Impact (Information)	425
9.1	Introduction	425
9.2	Further Studies	434
	<i>Author Index</i>	447
	<i>Subject Index</i>	457
