

Contents

1	Paramagnetism	1
1.1	Introduction	1
1.2	Quantum mechanics of atoms	4
1.2.1	L-S (Russel-Saunders) coupling	4
1.2.2	Hund's rules	6
1.2.3	Spin-orbit splitting	7
1.3	The quantum theory of paramagnetism	8
1.4	Crystal-field corrections	11
1.4.1	Effects of crystal-field symmetry	12
1.4.2	Stevens operator equivalents	14
1.5	Quenching of L	18
1.6	Time reversal and spin	20
1.6.1	Kramers degeneracy	21
1.7	Effective spin Hamiltonian	22
1.7.1	Effective gyromagnetic ratio	23
1.7.2	Single-ion anisotropy energy	23
2	Interacting Spins	27
2.1	Weiss model of ferromagnetism	27
2.1.1	Critical behaviour of Weiss model	28
2.2	Microscopic basis of magnetism	29
2.2.1	The direct exchange interaction	30
2.2.2	The superexchange mechanism	36
2.2.3	The RKKY interaction	40
3	Mean Field Approximation	43
3.1	Helmholtz free energy	43
3.2	Mean field susceptibility	50
3.3	Specific heat of ferromagnet	52
3.4	The Oguchi method	55
3.5	Modulated phases	58
3.6	MFA for antiferromagnetism	61
3.6.1	Longitudinal susceptibility	63
3.6.2	Transverse susceptibility	65

3.6.3	Spin-flop and other transitions	68
3.7	Helimagnetism	72
3.8	Goldstone's theorem	76
4	Spin Waves	79
4.1	Introduction	79
4.2	Holstein-Primakoff transformation	82
4.3	Linear spin-wave theory	84
4.4	Semiclassical picture	85
4.5	Macroscopic magnon theory	88
4.6	Thermal properties	89
4.6.1	Total spin deviation	89
4.6.2	Non-linear corrections	91
4.7	The Heisenberg antiferromagnet	92
4.7.1	Introduction	92
4.7.2	Antiferromagnetic spin-waves	93
4.7.3	Sublattice magnetization	97
4.7.4	Ground state energy of AFM	99
5	Magnetic Anisotropy	101
5.1	Introduction	101
5.2	Microscopic origin of anisotropy	104
5.3	Magneto-elastic coupling	108
5.4	Magnetostriction	111
5.5	Inverse magnetostriction	113
5.6	Induced magneto-crystalline anisotropy	115
6	Green's Functions Methods	117
6.1	Definitions	117
6.2	Spectral representation	119
6.3	RPA for spin 1/2 ferromagnet	122
6.4	Comparison of RPA and MFA	126
6.5	RPA for arbitrary spin	127
6.6	RPA for ferromagnets	129
6.6.1	Paramagnetic phase	129
6.6.2	Linear FM chain	132
6.6.3	Square FM lattice	133
6.7	FM with a finite applied field	135
6.8	RPA for antiferromagnet	136
6.8.1	Spin 1/2 AFM	137
6.8.2	Arbitrary spin AFM	138
6.8.3	Zero-point spin deviation	139
6.8.4	Correlation length	140
6.9	RPA susceptibility of AFM	143
6.10	Spin-flop transition	146
6.11	χ_{\parallel} at low T	148

6.12	Transverse susceptibility	149
6.13	Single-site anisotropy	150
6.14	Dynamic linear response	153
6.15	Energy absorbed from external field	156
6.16	Susceptibility of FM	158
6.17	Corrections to RPA	158
7	Dipole-Dipole Interactions	161
7.1	Dipolar Hamiltonian	161
7.2	Dipole-exchange spin-waves	166
7.3	Uniform precession ($k = 0$) mode	170
7.4	Eigenmodes for $k \neq 0$	174
7.4.1	Demagnetization factors	176
7.5	Ellipticity of spin precession	176
7.6	Effect of magnons on total spin	177
7.7	Magnetostatic modes	179
8	Coherent States of Magnons	183
8.1	Introduction	183
8.2	Coherent states of bosons	183
8.2.1	Overcompleteness of coherent states basis	185
8.3	Magnon number distribution function	186
8.4	Uncertainty relations	187
8.5	Phase states	188
8.6	Magnon states of well defined phase	190
8.7	Properties of the single-mode number states	191
8.8	Properties of a single-mode phase state	192
8.9	Expectation value of local spin operators in a coherent state	192
9	Itinerant Magnetism	195
9.1	Introduction	195
9.2	Pauli paramagnetic susceptibility	195
9.3	Stoner model of ferromagnetic metals	196
9.4	Hubbard Hamiltonian	198
9.5	Instability of paramagnetic phase	199
9.6	Magnons in the Stoner model	200
9.6.1	The RPA susceptibility	200
9.6.2	Singularities of the susceptibility	204
9.7	T_c in Stoner model	208
9.8	Metals with degenerate bands	210
9.9	Spin-density wave	213
9.10	Hartree-Fock description of SDW	215
9.11	Effects of correlations	222
9.11.1	Kinetic exchange interaction	224
9.12	Paramagnetic instability and paramagnons	228
9.12.1	Paramagnon contribution to the specific heat	232

9.13 Beyond Stoner theory and RPA	234
9.14 Magnetism and superconductivity	234
10 Indirect Exchange	239
10.1 Introduction	239
10.2 Effective s - d exchange interaction	240
10.3 Indirect exchange Hamiltonian	247
10.4 Range function and band structure	248
10.5 Semiconductors	256
10.5.1 Intrinsic semiconductors, high T	256
10.5.2 Intrinsic semiconductors, low T	257
10.5.3 Degenerate semiconductors	259
10.6 Magnetic multilayer systems	259
11 Local Moments	263
11.1 The s - d and Anderson Hamiltonians	263
11.2 Anderson model	263
11.3 Hartree–Fock solution of Anderson Hamiltonian	264
11.4 Kondo effect	267
11.4.1 Calculation of resistivity	268
11.4.2 Calculation of the collision time	269
11.4.3 Higher order contributions	275
12 Low Dimensions	277
12.1 Introduction	277
12.2 Proof of Mermin–Wagner theorem	278
12.2.1 Bogoliubov inequality	278
12.2.2 Application to the Heisenberg model	279
12.3 Dipolar interactions in low dimensions	282
12.3.1 Dipole-exchange cross-over	286
12.4 One dimensional instabilities	287
12.5 Antiferromagnetic chain	289
12.6 RPA for the AFM chain	291
12.6.1 Exchange dominated regime	291
12.6.2 Dipolar dominated regime	294
12.7 Dipolar interaction in layers	295
12.7.1 Monolayer	297
12.7.2 Bilayer	298
13 Surface Magnetism	305
13.1 Introduction	305
13.2 MFA treatment of surfaces	306
13.3 Surface excitations	309
13.4 LRPA method	310
13.5 Wave functions for bulk and surface	316
13.6 Surface density of magnon states	317

13.7	Surface phase-transitions	319
13.8	Dipolar surface effects	323
13.9	Surface magnetism in metals	324
14	Two-Magnon Eigenstates	329
14.1	Introduction	329
14.2	Green's function formalism	331
14.3	One dimension	337
14.4	Two dimensions	339
14.5	Summary of results	340
14.6	Anisotropy effects	341
15	Other Interactions	345
15.1	Introduction	345
15.2	Two-magnon interaction	347
15.3	Three-magnon processes	349
15.4	Magnon-phonon interaction	353
15.5	Bilinear magnon-phonon interaction	355
Appendix A	Group Theory	359
A.1	Definition of group	359
A.2	Group representations	360
	A.2.1 Reducibility	361
A.3	Orthogonality relations	362
A.4	Projection operators	362
A.5	Coordinate transformations	363
A.6	Wigner-Eckart theorem	364
A.7	Space groups	365
A.8	Bloch's theorem	366
Appendix B	Time Reversal	369
B.1	Antilinear operators	369
B.2	Anti-unitary operators	371
B.3	Time reversal	371
