PREFACE	v
ACKNOWLEDGMENTS	vii
1. OVERVIEW	1
1.1. Classification of Materials	1
1.2. Evolution of Integrated Circuit (IC) Industry	4
1.3. From Design to Chips	8
1.4. The Wafer Substrate Manufacturing Flow	12
1.5. Wafer Processing Flow	19
1.6. What Is the Semiconductor Industry Trying to Achieve?	26
1.7. The Never-Ending Effort — Yield Improvement	31
2. BUILDING BLOCKS FOR INTEGRATED CIRCUITS	38
2.1. Fundamental Semiconductor Concepts	38
2.2. Resistors	47
2.3. The <i>pn</i> Junctions	50
2.4. Capacitors	52
2.5. The MOS Transistor	55
2.6. Integrated Circuits	58
3. THERMAL OXIDATION	63
3.1. Introduction	63

3.2.	Oxidation Mechanism and Modeling	68
3.3.	Isolation Technology	78
3.4.	Gate Oxide	86
3.5.	Cleaning before Thermal Oxidation	91
4.	GAS KINETICS AND PLASMA PHYSICS	97
4.1.	Gas Kinetics and Ideal Gases	97
4.2.	What Is Plasma? How Is It Formed?	104
4.3.	Introduction to Plasma Physics	110
4.4.	Electron Impact Phenomena	114
4.5.	Fundamental Plasma Reactor Configurations	120
4.6.	Magnetic Field Confinement	124
5.	CHEMICAL VAPOR DEPOSITION	128
5.1.	Classification of CVD Reactors and Films	128
5.2.	CVD Reactor Design Concepts	133
5.3.	CVD Reactor Modeling	136
5.4.	Characterization of Thin Films	146
5.5.	Applications of CVD Films	153
6.	PLASMA-ENHANCED CHEMICAL VAPOR DEPOSITION AND ETCHING	168
6.1.	The Plasma Reaction Pathways and System Variables	168
6.2.	Introduction to PECVD and Film Characterization	174
6.3.	Applications of PECVD Films	178
6.4.	Introduction to Plasma Etching	185
6.5.	Applications of Plasma Etching	190
6.6.	Plasma-Enhanced CVD and Etching Reactor Modeling	205
7.	PATTERN TRANSFER: PHOTOLITHOGRAPHY	212
7.1.	Introduction	212
7.2.	Preexposure Steps	214

7.3.	Resist Chemistry	222
7.4.	Fundamentals of Image Formation	233
7.5.	The Exposure System Evolution and Photoprocess Variations	250
7.6.	Postexposure Steps	258
8.	PATTERN GENERATION	260
8.1.	Introduction	260
8.2.	Electron Beam Writing and Resists	267
8.3.	Back-End Processing for Mask Making	277
8.4.	Resolution Enhancement Technology	289
9.	DOPING TECHNOLOGY	304
9.1.	Introduction	304
9.2.	Dopant Diffusion	310
9.3.	Ion Implantation	317
9.4.	Implant Damages and Annealing	327
9.5.	Applications of Doping Technology	332
10.	METALLIZATION AND SILICIDATION	338
10.1.	Introduction	338
10.2.	Sputtering Systems	346
10.3.	Aluminum Metal System	349
10.4.	Meeting the Step Coverage Requirements	357
10.5.	Why Silicides?	367
11.	PLANARIZATION AND CMP TECHNOLOGY	378
11.1.	Introduction	378
11.2.	Interlayer Dielectrics	382
11.3.	Spin on Glass	389
11.4.	Intermetal Dielectrics	392
11.5.	Introduction to Chemical Mechanical Polishing and Its Applications	398
11.6.	CMP Modeling	409

12. COPPER AND LOW- <i>k</i>	411
12.1. Back-End Processes	411
12.2. Cu Wiring	415
12.3. Low- <i>k</i> Dielectrics	431
12.4. Integration of Copper and Low- <i>k</i> Materials	435
GLOSSARY	440
