

CONTENTS

Preface	vii
Committees	ix
Opening Address <i>H. Fukuyama</i>	1
Welcoming Address <i>N. Osakabe</i>	3
 Special Lecture	
Albert Einstein: Opportunity and perception <i>C.N. Yang</i>	4
 Quantum Information and Entanglement	
Quantum optics with single atoms and photons <i>H.J. Kimble</i>	10
Quantum information system experiments using a single photon source <i>Y. Yamamoto</i>	16
Quantum communication and quantum computation with entangled photons <i>A. Zeilinger</i>	24
High-fidelity quantum teleportation and a quantum teleportation network for continuous variables <i>N. Takei, A. Furusawa</i>	29
Long lived entangled states <i>H. Häffner, F. Schmidt-Kaler, W. Hänsel, C. Roos, P.O. Schmidt, M. Riebe, M. Chwalla, D. Chek-al-Kar, J. Benhelm, U.D. Rapol, T. Körber, C. Becher, R. Blatt,</i>	33
Quantum non-locality using tripartite entanglement with non-orthogonal states <i>J. V. Corbett, D. Home</i>	38
Quantum entanglement and wedge product <i>H. Heydari</i>	42

Analysis of the generation of photon pairs in periodically poled lithium niobate <i>J. Söderholm, K. Hirano, S. Mori, S. Inoue, S. Kurimura</i>	46
Generation of entangled photons in a semiconductor and violation of Bell's inequality <i>G. Oohata, R. Shimizu, K. Edamatsu</i>	50
Quantum Computing	
Decoherence of a Josephson junction flux qubit <i>Y. Nakamura, F. Yoshihara, K. Harrabi, J.S. Tsai</i>	54
Spectroscopic analysis of a candidate two-qubit silicon quantum computer in the microwave regime <i>J. Gorman, D.G. Hasko, D.A. Williams</i>	60
Berry phase detection in charge-coupled flux-qubits and the effect of decoherence <i>H. Nakano, S. Saito, H. Takayanagi, R. Fazio</i>	64
Locally observable conditions for the successful implementation of entangling multi-qubit quantum gates <i>H.F. Hofmann, R. Okamoto, S. Takeuchi</i>	68
State control in flux qubit circuits: manipulating optical selection rules of microwave-assisted transitions in three-level artificial atoms <i>Y.-X. Liu, J.Q. You, L.F. Wei, C.P. Sun, F. Nori</i>	72
The effect of local structure and non-uniformity on decoherence-free states of charge qubits <i>T. Tanamoto, S. Fujita</i>	76
Entanglement-assisted estimation of quantum channels <i>A. Fujiwara</i>	80
Superconducting quantum bit with ferromagnetic π -Junction <i>T. Yamashita, S. Takahashi, S. Maekawa</i>	84
Generation of macroscopic Greenberger-Horne-Zeilinger states in Josephson systems <i>T. Fujii, M. Nishida, N. Hatakenaka</i>	88
Quantum-Dot Systems	
Tunable tunnel and exchange couplings in double quantum dots <i>S. Tarucha, T. Hatano, M. Stopa</i>	92

Coherent transport through quantum dots <i>S. Katsumoto, M. Sato, H. Aikawa, Y. Iye</i>	99
Electrically pumped single-photon sources towards 1.3 μm <i>X. Xu, D.A. Williams, J.D. Mar, J.R.A. Cleaver</i>	105
Aharonov-Bohm-type effects in antidot arrays and their decoherence <i>M. Kato, H. Tanaka, A. Endo, S. Katsumoto, Y. Iye</i>	109
Nonequilibrium Kondo dot connected to ferromagnetic leads <i>Y. Utsumi, J. Martinek, G. Schön, S. Maekawa</i>	113
Full counting-statistics in a single-electron transistor in the presence of strong quantum fluctuations <i>Y. Utsumi</i>	117
Anomalous Hall Effect and Spin-Hall Effect	
Geometry and the anomalous Hall effect in ferromagnets <i>N.P. Ong, W.-L. Lee</i>	121
Control of spin chirality, Berry phase, and anomalous Hall effect <i>Y. Tokura, Y. Taguchi</i>	127
Quantum geometry and Hall effect in ferromagnets and semiconductors <i>N. Nagaosa</i>	134
Spin-Hall effect in a semiconductor two-dimensional hole gas with strong spin-orbit coupling <i>J. Wunderlich, B. Kaestner, K. Nomura, A.H. MacDonald, J. Sinova, T. Jungwirth</i>	140
Intrinsic spin Hall effect in semiconductors <i>S. Murakami</i>	146
Spin Related Phenomena	
Theory of spin transfer phenomena in magnetic metals and semiconductors <i>A.S. Núñez, A.H. MacDonald</i>	150
Spin filters of semiconductor nanostructures <i>T. Dietl, G. Grabecki, J. Wróbel</i>	159

Experimental study on current-driven domain wall motion <i>T. Ono, A. Yamaguchi, H. Tanigawa, K. Yano, S. Kasai</i>	165
Magnetization reversal of ferromagnetic nano-dot by non local spin injection <i>Y. Otani, T. Kimura</i>	171
Theory of current-driven domain wall dynamics <i>G. Tatara, H. Kohno, J. Shibata, E. Saitoh</i>	177
Magnetic impurity states and ferromagnetic interaction in diluted magnetic semiconductors <i>M. Ichimura, K. Tanikawa, S. Takahashi, G. Baskaran, S. Maekawa</i>	183
Geometrical effect on spin current in magnetic nano-structures <i>M. Ichimura, S. Takahashi, S. Maekawa</i>	187
Ferromagnetism in anatase TiO ₂ codoped with Co and Nb <i>T. Hitosugi, T. Shimada, T. Hasegawa, G. Kinoda, K. Inaba, Y. Yamamoto, Y. Furubayashi, Y. Hirose</i>	191
 Superconductivity in Nano-Systems	
Nonlinear quantum effects in nanosuperconductors <i>C. Carballeira, G. Teniers, V.V. Moshchalkov, A. Ceulemans</i>	194
Coalescence and rearrangement of vortices in mesoscopic superconductors <i>A. Kanda, N. Shimizu, K. Tadano, Y. Ootuka, B.J. Baelus, F.M. Peeters, K. Kadowaki</i>	200
Superconductivity in topologically nontrivial spaces <i>M. Hayashi, T. Suzuki, H. Ebisawa, M. Kato, K. Kuboki</i>	204
DC-SQUID ratchet using atomic point contact <i>Y. Ootuka, H. Miyazaki, A. Kanda</i>	208
Superconducting wire network under spatially modulated magnetic field <i>H. Sano, A. Endo, S. Katsumoto, Y. Iye</i>	212
Simple and stable control of mechanical break junction for the study of superconducting atomic point contact <i>H. Miyazaki, A. Kanda, Y. Ootuka, T. Yamaguchi</i>	216
Critical currents in quasiperiodic pinning arrays: One-dimensional chains and Penrose lattices <i>V. R. Misko, S. Savel'ev, F. Nori</i>	220

Macroscopic quantum tunneling in high- T_c superconductor Josephson junctions <i>S. Kawabata</i>	224
-------------------------------------------------------------------------------------------------------	-----

Novel Properties of Carbon Nanotubes

Carbon nanotubes and unique transport properties: Importance of symmetry and channel number <i>T. Ando</i>	228
---------------------------------------------------------------------------------------------------------------	-----

Optical processes in single-walled carbon nanotubes threaded by a magnetic flux <i>J. Kono, S. Zaric, J. Shaver, X. Wei, S.A. Crooker, O. Portugall, G.L.J.A. Rikken, R.H. Hauge, R.E. Smalley</i>	234
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

Non-equilibrium transport through a single-walled carbon nanotube with highly transparent coupling to reservoirs <i>P. Recher, N. Y. Kim, Y. Yamamoto</i>	242
--------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

Novel properties of Nano-systems

Transport properties in low dimensional artificial lattice of gold nano-particles <i>S. Saito, T. Arai, H. Fukuda, D. Hisamoto, S. Kimura, and T. Onai</i>	246
---------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

First principles study of dihydride-chain structures on H-terminated Si(100) surface <i>Y. Suwa, M. Fujimori, S. Heike, Y. Terada, T. Hashizume</i>	250
--------------------------------------------------------------------------------------------------------------------------------------------------------	-----

Electrical property of Ag nanowires fabricated on hydrogen-terminated Si(100) surface <i>M. Fujimori, S. Heike, T. Hashizume</i>	254
-------------------------------------------------------------------------------------------------------------------------------------	-----

Effect of environment on ionization of excited atoms embedded in a solid-state cavity <i>M. Ando, C. Lee, S. Saito, Y. A. Ono</i>	258
--------------------------------------------------------------------------------------------------------------------------------------	-----

Development of universal virtual spectroscope for optoelectronics research: First principles software replacing dielectric constant measurements <i>T. Hamada, T. Yamamoto, H. Momida, T. Uda, T. Ohno, N. Tajima, S. Hasaka, M. Inoue, N. Kobayashi</i>	262
----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

Quantum Nernst effect <i>H. Nakamura, N. Hatano, R. Shirasaki</i>	266
----------------------------------------------------------------------	-----

Precise Measurements

Quantum phenomena visualized using electron waves <i>A. Tonomura</i>	270
An Optical lattice clock: Ultrastable atomic clock with engineered perturbation <i>H. Katori, M. Takamoto, R. Higashi, F.-L. Hong</i>	276
Development of Mach-Zehnder interferometer and “coherent beam steering” technique for cold neutron <i>K. Taketani, H. Funahashi, Y. Seki, M. Hino, M. Kitaguchi, R. Maruyama , Y. Otake , H.M. Shimizu</i>	282
Surface potential measurement by atomic force microscopy using a quartz resonator <i>S. Heike, T. Hashizume</i>	286

Fundamental Problems in Quantum Physics

Berry's phases and topological properties in the Born-Oppenheimer approximation <i>K. Fujikawa</i>	290
Self-trapping of Bose-Einstein condensates by oscillating interactions <i>H. Saito, M. Ueda</i>	294
Spinor solitons in Bose-Einstein condensates — Atomic spin transport <i>J. Ieda</i>	298
Spin decoherence in a gravitational field <i>H. Terashima, M. Ueda</i>	302
Berry's phase of atoms with different sign of the g -factor in a conical rotating magnetic field observed by a time-domain atom interferometer <i>A. Morinaga, H. Narui, A. Monma, T. Aoki</i>	306
List of participants	309
Author Index	317
